Livestock, Pasture and Range Report: Pasture and range condition rated 1 percent very poor, 1 percent poor, 23 percent fair, 55 percent good, and 18 percent excellent. No unusual livestock conditions or concerns were being reported. The weather has been great for late spring calving.

IOWA PRELIMINARY WEATHER SUMMARY
Provided by Harry Hillaker, State Climatologist
Iowa Department of Agriculture & Land Stewardship

The past reporting week began with rain showers covering the southwest three-fourths of the state and cool weather with highs mostly in the 50’s on Monday (26th). Tuesday (27th) and Wednesday (28th) were dry with temperatures averaging slightly below normal. A light freeze was reported over parts of northeast and east central Iowa on Wednesday morning. Much warmer air arrived on Thursday (29th) with highs mostly in the 80’s and was followed by widespread shower and thunderstorm activity from Wednesday evening into Thursday afternoon. High winds and/or large hail were reported from 10 counties over the northwest one-half of Iowa on Thursday evening and from nine counties over southeast Iowa on Friday afternoon and evening. Light rain fell over far southeastern Iowa Saturday into early Sunday morning while thunderstorms were scattered over the southeast two-thirds of the state on Sunday (30th) afternoon and evening. Temperature extremes ranged from Wednesday morning lows of 28 degrees at Cresco and Elkader to a Thursday afternoon high of 86 degrees at Glenwood. Temperatures for the week as a whole averaged 3.5 degrees above normal. Rain totals varied widely from only 0.09 inches at Lansing to 2.78 inches at Oakland. The statewide average precipitation was 0.85 inches or nearly identical to the weekly normal of 0.86 inches. Soil temperatures as of Sunday (2nd) were mostly averaging in the upper 50’s.

FIELD WORK AND CROP PROGRESS

Agricultural Summary: Heavy rain, strong winds and isolated hail limited field work this week for much of the state. The large amounts of rainfall have caused soil erosion, standing water in low land fields, and a concern some re-planting may need to be done due to crustiness of the soil. Areas receiving hail reported little to no damage. Farmers concentrated on planting when weather permitted and already emerged oats and corn were reported to be in good condition. Oat planting is nearly complete, reaching 99 percent statewide. Hay crops are showing good growth with the abundance of rain thus far this season. Permanent pastures are improving and being used more. Livestock are showing little sign of stress.

There were 3.1 days suitable for fieldwork during the week, compared with 4.7 days last week. The days suitable for fieldwork ranged from a low of 1.1 days in Southeast Iowa to a high of 4.2 days in Northeast Iowa. Topsoil moisture rated 0 percent very short, 2 percent short, 78 percent adequate, and 20 percent surplus across the state. Subsoil moisture rated 0 percent very short, 2 percent short, 79 percent adequate, and 20 percent surplus. There will be 1.9 days suitable for fieldwork next week.

Field Crop Report: Corn acreage planted was 84 percent complete, increasing 16 percentage points from last week. Corn planting progress is 10 days ahead of last year, 13 days ahead of the five-year average, and 78 percent adequate, and 20 percent surplus across the state. Subsoil moisture rated 0 percent very short, 1 percent short, 79 percent adequate, and 20 percent surplus.
