Vol 10-29

For the week ending September 19, 2010

COOLER CONDITIONS CONTINUE

Agricultural Summary: Iowa experienced another week of cool weather last week, as average high temperatures for much of the state were in the mid-seventies. Along with average lows dipping into the mid-fifties, Iowa witnessed several rain showers throughout the week. South Central Iowa received the largest amounts, as thunderstorms over the weekend brought heavy rains totaling over 6 inches in some locations. While heavy rains fell in the south, most of Iowa received around an inch or less. Rainfall amounts were enough to create muddy field conditions and limit farmers' activity. However, producers were able to harvest some corn and soybean acres early in the week.

The wet, cool weather slowed crop development after several weeks of rapidly maturing and drying. Concerns of crops maturing too quickly and affecting final grain weight are being reported. Crop progress continues to be ahead of normal, as conditions remain mostly good. Early planted corn harvest continued with reports of better production coming from sloped fields. The same can be said for soybeans, with low-lying areas of fields causing yields to be cut because of drown out. Aside from corn and soybean harvest, operators are making one final cutting of alfalfa, but are having difficulty harvesting due to recent weather conditions.

There were 4.8 days suitable for fieldwork last week compared to 5.4 days the previous week. All but Northwest Iowa, at 3.8 days suitable, reported 4.5 days or more with East Central Iowa reporting the highest number of days, at 5.5 days suitable. Topsoil moisture rated 0 percent very short, 4 percent short, 78 percent adequate, and 18 percent surplus across the state. Subsoil moisture rated 0 percent very short, 4 percent short, 78 percent adequate, and 18 percent surplus.

Field Crops Report: Nearly all corn acres have dented, 79 percent has reached maturity, and 6 percent has been harvested; all three are at least 8 days ahead of last year and the five-year average. Moisture content of all corn in the field is estimated at 25 percent, while moisture content of corn being harvested is estimated at 21 percent. Corn lodging is rated 78 percent none, 19 percent light, 3 percent moderate, and 0 percent heavy. Ear droppage is rated 84 percent none, 14 percent light, 2 percent moderate, and 0 percent heavy. Corn condition rated 4 percent very poor, 8 percent poor, 20 percent fair, 47 percent good, and 21 percent excellent. Eightynine percent of the soybean acres have turned color, ahead of last year's 84 percent and the five-year average of 87 percent. Leaves have begun to drop in 57 percent of the soybean acres, 3 days ahead

Statewide Crop Conditions as of September 19, 2010

•							
Item	Very Poor	Poor	Fair	Good	Excellent		
	(Percent)	(Percent)	(Percent)	(Percent)	(Percent)

Soybeans shattering	89	10	1	0	

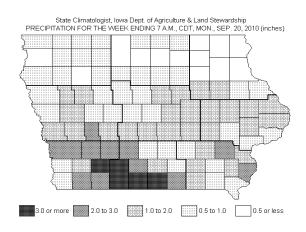

of last year and equal to the five-year average. Soybean condition rated 3 percent very poor, 7 percent poor, 20 percent fair, 49 percent good, and 21 percent excellent. Alfalfa third cutting increased 3 percentage points to 95 percent complete, ahead of the 89 percent completed last year and the five-year average of 92 percent. All hay condition rated 4 percent very poor, 8 percent poor, 25 percent fair, 48 percent good, and 15 percent excellent.

<u>Livestock, Pasture and Range Report:</u> Pasture and range condition rated 2 percent very poor, 5 percent poor, 28 percent fair, 48 percent good, and 17 percent excellent. Recent weather conditions have been beneficial for livestock after a summer of high heat and humidity.

IOWA PRELIMINARY WEATHER SUMMARY Provided by Harry Hillaker, State Climatologist Iowa Department of Agriculture & Land Stewardship

As is typical for the season the past week saw highly variable weather across Iowa. Temperatures were generally above normal from Monday (13th) through Wednesday (15th) with daytime highs generally in the mid 70's to mid 80's. Temperatures were well below normal on Thursday (16th), Saturday (18th) and Sunday (19th) with highs mostly in the 50's and 60's. Friday (17th) averaged near normal with highs in the upper 60's northeast to mid 80's southwest. Temperature extremes for the week varied from a Monday afternoon high of 91 degrees at Glenwood to a Saturday morning low of 39 degrees at Sibley. Temperatures for the week as a whole averaged 0.4 degrees below normal. The reporting week began with showers and thunderstorms over the southwest one-half of the state with locally heavy rain over parts of south central Iowa. Dry weather prevailed on Tuesday while Wednesday saw scattered thunderstorms over the northwest half of the state. Thursday and Friday were mostly dry while rain fell statewide on Saturday with torrential downpours and some severe hail over portions of southwest Iowa. Finally, rain fell nearly statewide on Sunday with amounts mostly on the light side. Weekly rain totals varied from only 0.12 inches at Kanawha in Hancock County to 6.90 inches at Mount Ayr. The statewide average precipitation was 1.24 inches while normal for the week is 0.79 inches. There were a few reports of large hail across west central Iowa on Monday afternoon as well as some hail and high wind reports over the northwest on Wednesday evening. However, the largest hail came on Saturday night with scattered damage from eastern Pottawattamie County southeastward to the Clarinda, Bedford and Mount Ayr areas.
