

FARM NUMBERS HIGHLIGHTS

The number of farms in Kentucky in 2000 totaled 90,000. This number was down 1,000 farms from 1999. The decrease in number of farms can be attributed to a decrease in the number of small farms. A farm is defined as any establishment from which \$1,000 or more of agricultural products were sold or would normally be sold during the year. Government payments are included in sales. Institutional farms, experimental and research farms, and Indian Reservations are included as farms. Places with their entire acreage enrolled in the Conservation Reserve Program, set aside, or other government programs are considered operating farms.

Kentucky ranks fourth tying Tennessee in number of farms. Ranking ahead of Kentucky in farm numbers were Texas with 226,000, Missouri with 109,000 and Iowa with 95,000. Of Kentucky's 90,000 farms, 51,000 had sales of \$1,000-\$9,999, 33,000 had sales of \$10,000-\$99,999 and 6,000 had sales of \$100,000 and over.

Land in farms was estimated at 13.6 million acres, unchanged from the 1999 estimate. Metropolitan expansion continues to take farmland out of agricultural production. Farmland in Kentucky accounted for 54 percent of the

approximate 25.4 million total acres in the State. The average size of a farm in Kentucky for 2000 was 151 acres, down from 1999's 153 acres.

The number of farms and ranches in the United States in 2000 was estimated at 2.17 million, down 0.9 percent from 1999. The decline in farms and ranches occurred primarily in agricultural operations with less than \$10,000 in sales. This is the largest decline in farms and ranches since 1991 when just over 29,000 operations were lost. Total land in farms, at 943.0 million acres, declined 0.5 percent or 4.4 million acres from last year. The average size of farm increased 2 acres from 432 acres in 1999 to 434 acres in 2000.

The U.S. number of agricultural operations in the economic sales class \$1,000-\$9,999 declined 1.7 percent to 1,173,650 in 2000. Farms and ranches with sales in the \$10,000-\$99,999 economic sales class increased slightly from 1999 to 649,350 operations while the number of farms and ranches with sales over \$100,000 rose 0.1 percent to 349,080. The impact of adverse weather, lower commodity prices and competition for land contributed to the overall reduction and consolidation of farms and ranches during 2000.

1/New definition of farm, initiated in 1975; a farm is a place as of June 1 that sells or could sell \$1,000 of agricultural products during the year. 2/Reference period changed from June 1 to all operations qualifying as a farm during the year to resolve a definitional difference between the Census of Agriculture and USDA's annual farm count. 3/Farm definition changed in 1995 to include farms with 5 horses or more even if they don't qualify under the \$1,000 or more of sales rule; boarding stables and race tracks are excluded. 4/Revised.
