Cooperating with Louisiana Department of Agriculture and Forestry

This report contains the results from the **Crop Progress and Condition** weekly survey. The survey is completed by parish extension agents' visual observations and contact with producers in their parish. These data are also posted on our web site at <https://www.nass.usda.gov/la> and in a more detailed report at <https://www.nass.usda.gov>. Thanks to all of the parish extension agents who responded to this survey.

**Week Ending: March 13, 2022**

**Released: March 14, 2022**

According to the National Agricultural Statistics Service in Louisiana, there were 2.9 days suitable for fieldwork for the **week ending Sunday, March 13, 2022**. Topsoil moisture supplies were 8 percent very short, 23 percent short, 60 percent adequate, and 9 percent surplus. Subsoil moisture supplies were 6 percent very short, 26 percent short, 65 percent adequate, and 3 percent surplus.

### Crop Progress for Week Ending March 13, 2022

Crop	This week (percent)	Last week (percent)	Last year (percent)	5-year average (percent)
Corn planted	11	(NA)	13	6
Rice planted	9	(NA)	7	6
Winter wheat headed	1	(NA)	1	3

(NA) Not available.

## Louisiana Subsoil Moisture Map for the Week of February 28 – March 6, 2022

The Soil Moisture Active Passive (SMAP) provides measurements of soil moisture in the root zone as a weekly average, represented by pixels. Each pixel represents 9 by 9 kilometer plot or about 20,000 acres. The SMAP data measures soil moisture in cubic centimeters of water/cubic centimeters of soil. The scale represents the percent of water in a given volume of soil. More information and additional mapping is available at <https://nassgeo.csiss.gmu.edu/CropCASMA/>.
