According to the National Agricultural Statistics Service in Louisiana, there were 4.5 days suitable for fieldwork for the week ending Sunday, April 10, 2022. Topsoil moisture supplies were 1 percent very short, 15 percent short, 70 percent adequate, and 14 percent surplus. Subsoil moisture supplies were 0 percent very short, 13 percent short, 74 percent adequate, and 13 percent surplus.

The USDA NASS National Crop Progress release is a more detailed report including crop progress and condition at the National level. You can locate that release at: [https://release.nass.usda.gov/reports/prog1622.pdf](https://release.nass.usda.gov/reports/prog1622.pdf)
Louisiana Subsoil Moisture Map for the Week of March 28 – April 3, 2022

The Soil Moisture Active Passive (SMAP) provides measurements of soil moisture in the root zone as a weekly average, represented by pixels. Each pixel represents 9 by 9 kilometer plot or about 20,000 acres. The SMAP data measures soil moisture in cubic centimeters of water/cubic centimeters of soil. The scale represents the percent of water in a given volume of soil. More information and additional mapping is available at [https://nassgeo.csiss.gmu.edu/CropCASMA/](https://nassgeo.csiss.gmu.edu/CropCASMA/).
