According to the National Agricultural Statistics Service in Louisiana, there were 5.0 days suitable for fieldwork for the week ending Sunday, May 29, 2022. Topsoil moisture supplies were 12 percent very short, 29 percent short, 53 percent adequate, and 6 percent surplus. Subsoil moisture supplies were 6 percent very short, 27 percent short, 62 percent adequate, and 5 percent surplus.

The USDA NASS National Crop Progress release is a more detailed report including crop progress and condition at the National level. You can locate that release at: https://release.nass.usda.gov/reports/prog2322.pdf
The Soil Moisture Active Passive (SMAP) provides measurements of soil moisture in the root zone as a weekly average, represented by pixels. Each pixel represents 9 by 9 kilometer plot or about 20,000 acres. The SMAP data measures soil moisture in cubic centimeters of water/cubic centimeters of soil. The scale represents the percent of water in a given volume of soil. More information and additional mapping is available at https://nassgeo.csiss.gmu.edu/CropCASMA/.
