Cooperating with Louisiana Department of Agriculture and Forestry

This report contains the results from the **Crop Progress and Condition** weekly survey. The survey is completed by parish extension agents' visual observations and contact with producers in their parish. These data are also posted on our web site at <https://www.nass.usda.gov/la> and in a more detailed report at <https://www.nass.usda.gov>. Thanks to all of the parish extension agents who responded to this survey.

Week Ending: November 6, 2022

Released: November 7, 2022

According to the National Agricultural Statistics Service in Louisiana, there were 5.6 days suitable for fieldwork for the **week ending Sunday, November 6, 2022**. Topsoil moisture supplies were 25 percent very short, 43 percent short, 32 percent adequate, and 0 percent surplus. Subsoil moisture supplies were 21 percent very short, 46 percent short, 33 percent adequate, and 0 percent surplus.

Crop Progress for Week Ending November 6, 2022

Crop	This week (percent)	Last week (percent)	Last year (percent)	5-year average (percent)

Louisiana Subsoil Moisture Map for the week of October 24 – October 30, 2022

The Soil Moisture Active Passive (SMAP) provides measurements of soil moisture in the root zone as a weekly average, represented by pixels. Each pixel represents 9 by 9 kilometer plot or about 20,000 acres. The SMAP data measures soil moisture in cubic centimeters of water/cubic centimeters of soil. The scale represents the percent of water in a given volume of soil. More information and additional mapping is available at <https://nassgeo.csiss.gmu.edu/CropCASMA/>.
