Honey production from producers with five or more colonies in Minnesota totaled 5.94 million pounds in 2020 according to the USDA, National Agricultural Statistics Service *Honey Report*. This was a 15% decrease from the 6.96 million pounds produced in 2019. The number of honey producing colonies in the state decreased from 118,000 colonies in 2019 to 108,000 colonies in 2020. This number does not include producers with fewer than five colonies or producers who did not harvest honey. Yield per colony in Minnesota averaged 55 pounds, down 4 pounds per colony from 2019. Minnesota remains ranked seventh nationally in honey production, unchanged from last year. Colonies which produced honey in more than one state were counted in each state where the honey was produced. Therefore, at the United States level yield per colony may be understated, but total production would not be impacted.

On December 15, 2020, producer honey stocks in Minnesota, excluding stocks under government loan programs, were 2.50 million pounds, a 19% decrease from 2019. The state's 2020 honey crop was valued at \$10.4 million, down 18% from the previous year's \$12.7 million. The average price per pound for all marketing channels in Minnesota was \$1.75, down 8 cents from 2019.

Number of Colonies, Yield, Production, Stocks, Price, and Value – Selected States and United States: 2019 and 2020

[Operations with five or more colonies that also qualify as a farm. Colonies which produced honey in more than one state were counted in each state.]

¹ Honey producing colonies are the maximum number of colonies from which honey was harvested during the year. It is possible to harvest honey from colonies which did not survive the entire year.

² Stocks held by producers.

³ Average price per pound based on expanded sales.

⁴ Value of production is equal to production multiplied by average price per pound.

⁵ Due to rounding, total colonies multiplied by total yield may not exactly equal production.

⁶ United States value of production will not equal summation of states.

UNITED STATES BEE & HONEY

United States honey production in 2020 totaled 148 million pounds, down 6% from 2019. There were 2.71 million colonies producing honey in 2020, down 4% from 2019. Yield per colony averaged 54.5 pounds, down 2% from the 55.8 pounds in 2019. Colonies which produced honey in more than one State were counted in each State where the honey was produced. Therefore, at the United States level yield per colony may be understated, but total production would not be impacted. Colonies were not included if honey was not harvested. Producer honey stocks were 39.7 million pounds on December 15, 2020, down 3% from a year earlier. Stocks held by producers exclude those held under the commodity loan program.

United States honey prices increased 2% during 2020 to \$2.03 per pound, compared to \$1.99 per pound in 2019. United States and State level prices reflect the portions of honey sold through cooperatives, private, and retail channels. Prices for each color class are derived by weighting the quantities sold for each marketing channel. Prices for the 2019 crop reflect honey sold in 2019 and 2020. Some 2019 crop honey was sold in 2020, which caused some revisions to the 2019 crop prices.

The average prices paid in 2020 for honey bee queens, packages, and nucs were \$18, \$84, and \$105 respectively. Pollination income for 2020 was \$254 million, down 18% from 2019. Other income from honey bees in 2020 was \$55.8 million, down 28% from 2019.
