USDA to Collect Final 2021 Crop Production and Crop Stocks Data

November 19, 2021 – As the 2021 growing season officially comes to an end, the U.S. Department of Agriculture’s National Agricultural Statistics Service (NASS) will contact producers nationwide to gather final year-end crop production numbers and the amount of grain and oilseeds they store on their farms. At the same time, NASS will survey grain facility operators to determine year-end grain and oilseed stocks. To protect the health of producers, partners, and employees, NASS is unable to work with survey respondents in person to complete this survey.

“These surveys are the basis for the official USDA estimates of production and harvested acres of all major agricultural commodities in the United States and year-end grain and oilseed supplies,” said Curt Stock, Nevada State Statistician. “Data from the survey will benefit farmers and processors by providing timely and accurate information to help them make critical year-end business decisions and begin planning for the next growing and marketing season.”

NASS will analyze the survey information and publish the results in a series of USDA reports, including the Crop Production Annual Summary and quarterly Grain Stocks reports, both scheduled for release on Wednesday, January 12, 2022.

As with all NASS surveys, information provided by respondents is confidential, as required by federal law. NASS safeguards the privacy of all responses and publishes only aggregate data, ensuring that no individual operation or producer can be identified. All NASS reports are available online at www.nass.usda.gov/Publications/. For more information call the NASS Pacific Regional Field Office at 1-800-851-1127.

###

NASS is the federal statistical agency responsible for producing official data about U.S. agriculture and is committed to providing timely, accurate and useful statistics in service to U.S. agriculture.

USDA is an equal opportunity provider, employer, and lender.
