

PEARS

Connecticut was dropped from the NASS pear estimating program beginning in 2009. NASS conducts a program review after completion of each Census of Agriculture. A 5-year average production is computed for each State and the U.S. Each State's share of the total production is then calculated. States

with less than 1 percent of the U.S. total, or approaching the 1 percent level and showing a decreasing trend, are designated as limited estimate States or dropped from the estimating program. Following the 2007 Census of Agriculture historical review, Connecticut was dropped from the NASS pear estimating program. The State's status could change if there is a significant increasing production trend.

PEARS: Production and Value, 2000 – 2009

| State and Year | Production | | Utilized Price per Ton | Value of Utilized Production |
|---------------------------------|--------------------|-----------------------|------------------------|------------------------------|
| | Total ¹ | Utilized ² | | |
| | Tons | | Dollars | 1,000 Dollars |
| Connecticut ³ | | | | |
| 2000 | 1,250 | 1,250 | 562 | 703 |
| 2001 | 480 | 480 | 644 | 309 |
| 2002 | 500 | 500 | 858 | 429 |
| 2003 | 1,300 | 1,270 | 1,000 | 1,270 |
| 2004 | 900 | 900 | 800 | 720 |
| 2005 | 1,000 | 1,000 | 952 | 952 |
| 2006 | 1,000 | 1,000 | 1,100 | 1,100 |
| 2007 | 1,000 | 1,000 | 1,300 | 1,300 |
| 2008 | 800 | 800 | 1,340 | 1,073 |
| 2009 | — | — | — | — |

¹ Total production is the quantity actually harvested plus quantities which would have been acceptable for fresh market or processing but were not harvested because of economic or natural reasons.

² Utilized production is the amount sold plus the quantities used at home or held in storage.

³ Connecticut estimates discontinued in 2009.
