

WILD BLUEBERRIES

Maine's 2007 wild blueberry crop totaled 76.9 million pounds, three percent above 2006 output, and 28 percent higher than 2005 production. The preliminary average price growers expect to receive for processed berries in 2007 is 93.5 cents per pound, an increase of 13.5 cents from 2006. If realized, this would place the 2007 processing value at a record \$71.5 million, compared with \$59.4 million the

previous year. The next price update for the 2007 crop will be published in the *Noncitrus Fruits and Nuts Summary* scheduled for release on July 8, 2008.

Maine's wild blueberry crop survived the winter with minimal damage. Mummyberry and red leaf disease were evident in some fields, however overall disease pressure was light and there were few insect problems. A good bloom in early June, accompanied by excellent pollinating conditions resulted in above average fruit set in most areas. Dry conditions late in the growing season initially kept berry size small. Showers and cool nights arrived in August to improve berry size, and the season ended with average to above average sized fruit. Maine's wild blueberry harvest was complete by the beginning of September and crop condition ranged from good to fair across the state.

MAINE WILD BLUEBERRIES: Production and Value, 1998 – 2007

Year	Total Production	All Price per Pound	Total Value of Production	Fresh Wild Blueberries			Wild Blueberries for Processing
