## 2019 Blueberry Statistics

## New Jersey Blueberry Crop Valued at $\mathbf{\$ 8 5}$ Million

New Jersey blueberry growers harvested 46 million utilized pounds from 9,300 acres. The value of utilized production was over $\$ 85$ million for 2019, the highest since 2011 and third highest on record. Average price was $\$ 1.85$ per pound.

## United States Blueberry Utilized Production Increases 21 Percent

Utilized production in 2019 totaled 673 million pounds, leaping 21 percent from 2018. Area harvested was estimated at 102,700 acres, up 15 percent from the previous year. The average yield was 6,630 pounds per acre. Of the total utilized production, 373 million pounds were for the fresh market and 300 million pounds were for processing. The value of the crop totaled $\$ 909$ million, up 14 percent from the previous season, with an average annual price of $\$ 1.35$ per pound. One state's recent acreage increase, Georgia, is described thusly 'Blueberry harvested acres went down slightly from 2015 to 2016 before plummeting in 2017 due to a devastating freeze. In 2018, harvested acres rebounded slightly, but took a significant hit from Hurricane Michael. The surge higher in 2019 is due to better weather conditions as well as new bearing acres coming into production. Planted acreage has been increasing in recent years.'

## Who we are . . .

The mission of USDA's National Agricultural Statistics Service (NASS) is to provide timely, accurate, and useful statistics in service to United States agriculture. Statistics are based on data collected from growers and agri-businesses through annual, quarterly, monthly, and weekly surveys and the Census of Agriculture.

We issue about 500 national reports annually covering about 120 crop and 45 livestock items in the majorproducing states along with economic and demographic information. We publish reports according to a pre-set calendar. Strict security ensures that no one gains premature access to the information. We conduct he Census of Agriculture every five years to generate statistics for agricultural commodities at the county, state, and national levels. The five-year program also includes special studies like the Census of Horticulture and Aquaculture.

Reports are available via the Web at www.nass.usda.gov .

# 2019 Blueberry (Non-Citrus Fruits and Nuts) Release Date - 

May 5, 2020

We ensure the confidentiality of all individual reports. No person (outside of Agricultural Statistics Service personnel), organization, or other local, state, or federal government agency has access to any report an individual submits to us. Individual reports are used only in combination with other reports and are summarized to develop county, state, and national blueberry production estimates.

The publication and dissemination of agricultural statistics are possible only through the support and cooperation of the New Jersey Department of Agriculture and the agricultural industry. The New Jersey Agricultural Statistics Service would like to thank those producers who responded to our surveys and furnished information for the Blueberry Program.
