June Acreage for New Jersey
Soybeans Planted and Hay Harvested at 100 thousand acres each

TRENTON, NJ --- The June Acreage report provides official, survey-based estimates of U.S. farmers’ 2021 planting acreage, according to Bruce Eklund, state statistician of the USDA’s National Agricultural Statistics Service, New Jersey Field Office. The estimates of planted and harvested acreages are based primarily on surveys conducted during the first 2 weeks of June.

- New Jersey corn harvested for grain is expected to be 80,000 acres, matching 2020. New Jersey farmers are expected to harvest 98,000 soybean acres, up 5,000 acres from last year. The expected 18,000 wheat harvested acres match last year’s harvested acres. Hay area harvested is estimated at 100,000 acres, 15,000 of those being alfalfa.

Corresponding planted acres are:

- Corn planted area for all purposes is estimated at 90,000 acres.
- Soybean planted area is estimated at 100,000 acres.
- Winter Wheat area planted estimate remains at 23,000 acres.

Nationally, corn planted was up 2% from 2020, soybean acreage was up 5%, and all wheat acreage was up 5%, representing the fourth lowest all wheat planted area since records began in 1919.
