2011 Vegetable Season: During the 2011 growing season, conditions for vegetable development were good to excellent during the spring. Spring and early summer vegetable crops benefited from abundant moisture due to substantial melt from the previous year's snowfall. Dry spells started in early July, and irrigation was needed for most of the vegetable crops. However, in August Hurricane Irene, followed by two tropical storms, dumped more than 20 inches of rain throughout most the of state during just a one month period. As a result, many fields had standing water for more than two weeks. Continued excessive water prevented harvesting of late summer crops. The flooded conditions also caused severe damage to tomatoes, peppers, squash, and pumpkin crops. Much produce rotted in the field as a result. Despite all the damage, this season was rated overall as an above average growing season for New Jersey Vegetables.

Area harvested for the eighteen fresh market, and 5 major processing vegetables, totaled 39,100 acres. This was down 7 percent from 42,000 acres in 2010. Both fresh market and processing vegetable harvested acres declined. Combined production of fresh and processing vegetable was 311,420 tons, 17,900 tons less than 2010. Gross value for all crops was $\$ 204.8$ million in 2011, compared with $\$ 183.2$ million in 2010, as the results of sharply increasing season average prices.

Vegetables for Fresh Market: There are 18 fresh market vegetables in the USDA-NASS, New Jersey Field Office estimating program. Area planted for these fresh market vegetables in 2011 totaled 37,800 acres with 33,900 acres harvested. This compares to 37,900 acres planted in 2010 and 35,900 acres harvested. Production amounted to 5.24 million hundredweight, a decrease of 4 percent from the 5.46 million hundredweight produced in 2010. Overall yield in 2011 averaged 155 hundredweight per acre, up 3 hundredweight from the previous year. Season average price was $\$ 37.50$ per hundredweight compared with $\$ 32.10$ in 2010, an increase of $\$ 5.40$ per hundredweight.

Among the fresh market vegetables, asparagus, herbs, bell peppers, and snap beans had increased harvested acres in 2011 versus the previous year. Cabbage, cucumbers, lettuce, parsley, pumpkins, spinach, summer \& winter squash, and sweet corn had lower harvested acres in 2011 than in 2010. Collards, eggplant, escarole \& endive, kale, and tomato acres remained the same. The total value of fresh market vegetables showed an increase of 12.1 percent from $\$ 175.2$ million in 2010 to $\$ 196.4$ million in 2011.

Ranking New Jersey's fresh market vegetables by value of production, tomatoes replaced bell peppers as the number one commodity with $\$ 31.5$ million of value. Bell peppers were second with $\$ 30.4$ million. Sweet corn and cucumbers were third and fourth with $\$ 15.8$ million and $\$ 15.6$ million, respectively. Herbs replaced lettuce, ranking fifth, with $\$ 15.0$ million.

Vegetables for Processing: In 2011, harvested acreage of the five major processing vegetables (green peas, snap beans, spinach, sweet corn, and tomatoes) totaled 5,200 acres, compared 6,100 acres in 2010. Harvested acres increased for snap beans. Tomato acreage remained the same. And green peas, spinach, and sweet corn acreage decline. Total production, at 49,320 tons, was a 12 percent decrease from the 56,320 tons in 2010. The season average price was $\$ 171.20$ per ton, compared with $\$ 141.70$ per ton in 2010, up $\$ 29.50$ per ton. The 2011 value of production, at $\$ 8.45$ million, was up 6 percent from $\$ 7.98$ million the previous year.

> A special THANK YOU goes to all those producers who participated in our Vegetable Surveys!
