## NEW MEXICO DEPARTMENT OF AGRICULTURE

OFFICE OF THE DIRECTOR  
Box 3189/Las Cruces, New Mexico 88003  
Telephone (505) 646-3007

Agricultural methods and practices are changing rapidly in this mechanized age. New Mexico agriculture is faced with keeping in step with new requirements and needs of the consumer. As the business of agriculture becomes more complex, detailed statistics such as those found in this publication are becoming more of a necessity in making decisions.

The New Mexico Department of Agriculture in response to the growing need for statistical data is continuing its cooperative effort with the Statistical Reporting Service of the United States Department of Agriculture to provide the agriculture industry with this information.

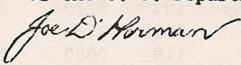

*W.P. Stephens*  
William P. Stephens  
Director

UNITED STATES DEPARTMENT OF AGRICULTURE  
STATISTICAL REPORTING SERVICE  
P. O. Drawer 580, Las Cruces, New Mexico 88001

The purpose of the Statistical Reporting Service is to provide reliable data to the agriculture industry. We are concerned that the accuracy and timeliness of our estimates meet the needs of today's agriculture. With the aid of rapid transmission and processing of data by electronics and the timely dissemination of reports via modern communications media, we are more capable of meeting these needs. Along with the improvement in agriculture production and marketing technology, significant advances have also been made in the statistical techniques used to provide better service to agriculture. These include modern sample surveys such as probability area sample surveys, multi-frame livestock survey, and objective methods of measuring crop yields. Also, periodic checks are made with those engaged in agricultural production and agri-business enterprises to determine the kinds of data most useful to the industry.

Despite these improved methods, we are still dependent upon the contribution made by the many voluntary crop and livestock reporters. Whether reporting facts about their individual farms or ranch operations by mail, by personal interview, or by telephone, they remain the principal source of information upon which accurate estimates depend. We in the New Mexico Crop and Livestock Reporting Service gratefully acknowledge the contributions of these public spirited citizens, our voluntary reporters. We also wish to acknowledge the contributions of numerous others such as agri-business people, farm organizations and State and County Extension personnel and other members of the U. S. Department of Agriculture, and the New Mexico Department of Agriculture.

This publication is a result of a cooperative effort of the New Mexico Department of Agriculture and the Statistical Reporting Service of the U. S. Department of Agriculture.

Joe D. Herman  
Agricultural Statistician in Charge

## ANNUAL CROP SUMMARY - 1972

Cash receipts from crop marketings in New Mexico totaled 124.2 million dollars, up 16 percent from last year's receipts of 107.1 million dollars. Although the number of farms has decreased 27 percent in the past decade, land in farms has dropped by only 5 percent.

Barley for grain production increased 7 percent during 1972. Production is estimated at 840,000 bushels compared to 784,000 bushels in 1972. Planted acres of barley for all purposes decreased from 28,000 acres in 1971 to 27,000 acres in 1972. Acres harvested for grain at 14,000 acres in 1972 was the same as the previous year. Yield per acre increased to 60.0 bushels.

Corn for grain production is estimated at 1,575,000 bushels, up 68 percent from last year's 935,000 bushels. Acres harvested for grain increased by 4,000 acres and is estimated at 21,000 acres. Yield per acre increased to 75.0 bushels, an all time high for the State.

Sorghum grain production totaled 19.3 million bushels, down 6 percent from the 20.5 million bushels produced in 1971. Acreage for harvest decreased to 297,000 acres compared to 353,000 acres in 1971. Yield per acre reached a new high of 65.0 bushels, up 12 percent from the 58.0 bushels produced in 1971. The previous record at 63.0 bushels per acre was established in 1966.

Wheat production in 1972 totaled 4,335,000 bushels. This represents a 13 percent increase from the 3,840,000 bushels produced in 1971. Acreage for harvest increased by 10,000 acres and is currently estimated at 170,000 acres. Yield estimated at 25.5 bushels per acre is 1.5 bushels above that realized in 1971.

All cotton production for 1972 is estimated at 173,400 bales, up 18,100 bales from the 1971 crop. Acres harvested, estimated at 152,100 acres, was 1,500 acres lower than that harvested in 1971. Yield per acre averaged 465 pounds per acre compared to 493 last year. Upland cotton production is estimated at 158,000 bales compared to 133,000 bales the previous year. Yield per acre averaged 581 pounds.

Production of all hay in 1972 at 932,000 tons is 9 percent below last year's production. Average yield per acre was 3.53 tons. Alfalfa hay represents 90 percent of all hay. Estimated production of alfalfa is 839,000 tons. Acres harvested remained at 195,000 acres. Yield is estimated at 4.30 tons per acre, down 4 percent from last year.

Production of broomcorn decreased from 3,100 tons in 1971 to 1,900 tons in 1972. Acreage for harvest at 12,000 acres is 6,000 acres less than that harvested in 1971. Yield per acre decreased from 345 pounds per acre to 315 pounds in 1972. Irish potatoe production increased from 480,000 cwt. in 1971 to 880,000 cwt. in 1972, this is the highest production on record. Harvested acres totaled 3,200 acres compared to 2,400 acres in 1971. Yield per acre at 275 cwt. is 75 cwt. higher than last year's level. Peanut production at 20.5 million pounds was up 23 percent from that produced in 1971. Harvested acres decreased from 8,000 acres in 1971 to 7,900 acres in 1972. Yield per acre is estimated at 2,590 pounds, 520 pounds more than the previous year. Apple production at 48,000 bushels is down sharply from last year's production of 298,000 bushels. The decrease in production was a result of a severe freeze last spring. Pecan production estimated at 7.0 million pounds is up 67 percent from the 4.2 million pounds produced in 1971.

1/ Based on acres in cultivation on July 1, 1952, total planted for later years.

2/ Bale weight: 1922-52 = 500 pound gross weight bale

1953-72 = 480 pound net weight bale

3/ Includes allowance for unredeemed loans.

4/ Does not include payments for acreage diversion, conservation practices, etc.

5/ Preliminary. (Subject to Revision).

6/ As of January 1, 1973; to be revised July, 1973.

## LIVESTOCK SUMMARY - 1972

Marketings of livestock and livestock products by New Mexico ranchers and farmers continued increasing in 1972. Preliminary estimates of cash farm receipts indicate a total of 416,900,000 from livestock and livestock products, an 11 percent increase over 1971.

The January 1973 inventory of all cattle and calves was 1,615,000 head, up 7 percent from the 1,509,000 on hand in 1972. Cow numbers increased 8 percent to 710,000 head. Beef cow numbers were up from a year earlier while milk cow numbers were down slightly. Heifers, steers, and bulls under 500 pounds increased 12 percent from the 1972 level.

There were 226,000 cattle on feed for the slaughter market on January 1, 1973. This is a 20 percent increase over the January 1, 1972 level. 1972 marketings out of feed lots was above the low level marked in 1971, but below the 1970 level. The average live weight of New Mexico commercial cattle slaughter was 979 pounds, compared to 952 pounds in 1971.

Milk cow numbers continued to decline in 1972 and are at the lowest level since 1908. Although numbers are declining, remaining herds are continually being upgraded. Average annual milk production in 1972 was 10,867 pounds per cow.

Sheep numbers on January 1, 1973 totaled 743,000 head, a 35 percent decrease in the past decade. A total of 51,000 sheep and lambs were on feed January 1, 1973 compared with 32,000 head the previous year. Wool production was down slightly in 1972. The number shorn was 5 percent below the 1971 level. The average price of wool, at 34 cents per pound, was double the 1971 price. The value of wool production for 1972 was \$2,086,000.

The December 1, 1972 inventory of hogs was 63,000 head, down 1,000 head from the level a year earlier. The inventory was valued at \$5,241,000 which includes value of breeding animals and other pigs of all sizes, for an average of \$83.19 per head. The average price received for market hogs for the marketing year December through November was \$25.50 per hundred weight compared to the average of \$18.50 received during the 1971 marketing year.

The December 1, 1972 chicken inventory at 1,271,000 birds was 5 percent above the level of last year. Hens of laying age increased 86 percent while pullets of laying age declined 36 percent. Egg production was 7 percent above the level of the last 2 years. An average of 227 eggs per layer was laid during 1972 compared to 214 eggs in 1971. Egg prices in 1972 average 35.9 cents per dozen.

Red meat production from slaughter plants in New Mexico that are under Federal and State inspection was 241.4 million pounds during 1972 compared to 215.5 million pounds in 1971, a 12 percent increase. The number of head slaughtered during 1972 and 1971 respectively were: cattle---388,000 and 353,500; hogs---115,900 and 121,400; sheep and lambs---123,700 and 88,300.

1/ As of 1969 classification of cattle and calves has changed. For years 1969, 1970, 1971, &amp; 1972 refer to page 39.

2/ Not strictly a calving rate. Figure represents calves born expressed as percentage of January 1 inventory of cows and heifers 2 years old and over and not the number of all cattle and heifers giving birth to calves during the year.

3/ Cattle and calves slaughtered combined.

## CATTLE AND CALVES: NUMBERS ON FARMS AND RANCHES BY CLASSES, JANUARY 1, 1970-1973

Year	All cattle and calves	Cows and heifers that have calved			Heifers 500 lbs. and over			Total	Steers 500 lbs. & over	Heifers, steers, & bulls under 500 lbs.
		All cows	Beef cows	Milk cows	Bulls 500 lbs. & over	Beef replacement	Milk replacement
