RANGE AND PASTURE CONDITION	56

NEW MEXICO AGRICULTURAL STATISTICS

NEW MEXICO DEPARTMENT OF AGRICULTURE

OFFICE OF THE DIRECTOR
Box 3189/Las Cruces, New Mexico 88003
Telephone (505) 646-3007

TO THOSE INTERESTED IN NEW MEXICO'S AGRICULTURE:

Agricultural methods and practices are changing rapidly in this mechanized age. New Mexico agriculture is faced with keeping in step with new requirements and needs of the consumer. In addition, allied industries must keep pace with changes in agriculture to meet its needs in order to adequately provide food and fiber to the people of this country and the world.

To assist all concerned, we take pride in presenting this volume of New Mexico Agricultural Statistics, providing up to date agricultural production by counties and production values of the major crops of New Mexico.

This publication is a cooperative effort of the New Mexico Department of Agriculture and the Economics, Statistics, and Cooperatives Service of the United States Department of Agriculture.

W.P. Stephens

William P. Stephens

NEW MEXICO
DEPARTMENT OF AGRICULTURE
Agricultural Statistics

American agriculture, including producers, agribusiness, and researchers, need unbiased data to help function efficiently. With relevant information, the industry and government can more effectively make decisions relating to production, resource allocation, and formulation of agricultural policy.

Response to all surveys used in making estimates for this publication is voluntary, and the Department is grateful to all parties who cooperated in providing information. Without the help of farmers, ranchers, and agribusiness; reliable estimates on food, fiber, and agricultural related items would not be possible. Their contribution to this service is greatly appreciated.

This publication is a result of a cooperative effort of the New Mexico Department of Agriculture and the Economics, Statistics, and Cooperatives Service of the United States Department of Agriculture.

Joe D. Herman

Agricultural Statistician in Charge

1/ Includes farms and ranches having one or more head of species; ranch estimates are unofficial and should be used only as a guide.

2/ Preliminary.

NA: Not Available.

NEW DEFINITION: Farms and ranches with annual sales of \$1,000 or more.

ANNUAL CROP SUMMARY - 1978

Cash receipts from farm marketings for crops in New Mexico totaled 193.3 million dollars in 1978, down 13 percent from 1977's total of 221.5 million dollars. Decreases in production of cotton, corn, wheat, and peanuts accounted for the drop in total receipts with most of the decrease being attributed to the smaller upland cotton crop. Farms and ranches in the State were estimated to number 11,400 and accounted for 46.8 million acres.

Upland cotton production totaled 101,000 bales, down 37 percent from last year's large crop. Acreage planted was 137,000 acres, up 6,000 from the previous year; but acres harvested at 109,000 acres was down 19,000 acres from 1977. The 28,000 acres abandoned, much of which was caused by hail and heavy rain early in the season, was the largest on record. Average yield of 443 pounds per acre was 160 pounds below last year.

American pima cotton production of 13,000 bales was 1,000 bales over last year. Acres harvested, estimated at 13,700 made a large increase over last year's 9,300 acres, but the yield of 454 pounds was 167 pounds below 1977's record yield.

Sorghum grain production of 12,282,000 bushels was up 4 percent from 1977 even though the average yield of 46 bushels per acre, irrigated and dryland combined, was down 2 bushels from last year. Acres harvested at 267,000 acres was 9 percent above 1977.

Corn for grain production in 1978 of 7,560,000 bushels was 26 percent below last year's record production. An average yield of 105 bushels per acre was 15 bushels above 1977, but acres harvested fell to 72,000 in 1978 from 114,000 acres in 1977.

Winter wheat production, including durum, of 5,662,000 bushels was down 38 percent from last year's near record crop. Average yield estimated at 19 bushels per acre was down 2.5 bushels from 1977. Acres harvested was down sharply to 298,000 acres in 1978 from 425,000 in 1977.

Barley production of 1,425,000 bushels was up 7 percent. Although acres harvested dropped slightly from 26,000 in 1977 to 25,000 in 1978, yields increased 6 bushels to 57 bushels per acre.

All hay production of 1,054,000 tons was down 6 percent from 1977. Acres harvested of 301,000 remained stable, but yields dropped slightly. Alfalfa hay accounted for 231,000 acres and 970,000 tons of the total. Average yield was estimated at 4.2 tons per acre.

Peanut production in 1978 was 24,064,000 pounds compared with 25,380,000 pounds in 1977. A reduction in the average yield from 2,700 pounds per acre in 1977 to 2,560 in 1978 accounted for the decreased production. Harvested acres remained constant at 9,400 acres.

Irish potato production of 779,000 cwt. was a sizable increase over last year's 551,000 cwt. Harvested acres increased 900 acres to 3,800 and yield increased 15 cwt. to 205 cwt.

Pecan production remained stable at a record high 15 million pounds. Quite a few younger orchards were beginning to come into production.

Apple production of orchards with 100 trees or more was estimated at 17 million pounds.

Vegetable production increased in all categories. Chile production continued to increase, and set another record high. The 1978 production of 17,200 tons, including green chile tonnage converted to dry basis, was 4 percent above last year's record. Acres harvested increased from 10,900 in 1977 to 11,200 in 1978. Spring lettuce production almost tripled from 128,000 cwt. in 1977 to 351,000 cwt. in 1978. Large increases in both acreage and yield occurred with acreage increasing 550 acres to 1,300, and yields increasing from 170 cwt. to 270 cwt. Fall lettuce production increased to 703,000 cwt. from the previous year's 600,000 cwt. Average yield decreased slightly, but acreage increased 700 acres to 3,700. Onion production increased to 1,184,000 cwt. from 1,040,000 cwt. Yields decreased slightly, but an increase of 500 acres to 3,700 acres harvested accounted for the increased production.

ANNUAL LIVESTOCK SUMMARY - 1978

The year 1978 was the fourth consecutive year of herd reduction in the current cattle cycle. The National inventory declined 5 percent from the previous year total. During the four year period, beginning 1975, a combined 17 percent decrease has been experienced by the Nation's herd. New Mexico's total inventory of cattle and calves, meanwhile, came down 3 percent during 1978 to the same number of two years ago.

The State enjoyed mild weather, in general, throughout the year, as reflected in the little variation of pasture and range condition. This condition remained "poor to fair" from April through December and fluctuated, percentage wise, from a low of 65 in May to a high of 76 in July.

Cash receipts for livestock and livestock products skyrocketed to 740.5 million dollars. This is a preliminary estimate but the highest on record, also. Much higher values per head, for all livestock commodities, than in previous years were the major factor causing this increase. Cattle and calves totaled 1,500,000 head as of January 1, 1979. This estimate was 3 percent below previous year's and same as two years before. It is, also, the lowest estimate since 1969. Beef cows were estimated at 602,000, declining 3 percent from the year before and lowest since estimates for this category began in 1970. Milk cows increased for the first time since January 1, 1975 to 33,000. This was 2,000 more than in 1978. Bulls (500 pounds plus) were down 3,000 to 40,000 head from a year ago. Heifers (500 pounds plus) for beef cow replacements estimated at 75,000 head were down 14 percent from 1978 and, like beef cows, lowest since 1970. Heifer (500 pounds plus) for milk cow replacements equaled two-thirds of last year's at 8,000 head. Other heifers (500 pounds plus) decreased 26 percent from a year ago to 78,000 head, which is the lowest since 1970. Steers (500 pounds plus) increased 7 percent from last year to 184,000 head. This is the second year in a row in which steer numbers have climbed up. Steer, heifer, and bull calves (under 500 pounds) remained unchanged, at 480,000 head, from 1978. Calf crop was estimated at 560,000 head for 1978. This is the lowest estimate since 1959 and 5,000 head less than the 1977 crop.

Cattle and calves being fed for slaughter market as of January 1, 1979 were estimated at 202,000 head, down 4,000 head from the year before. Marketings out of feedlots totaled 337,000 head during 1978. This is 43,000 head above 1977 and highest since 1974. Placements totaled 376,000 head in 1978, only 3,000 head below 1977. Other disappearance (including death loss, shipments to other feedlots, and returned to pasture) totaled 43,000 head in 1978 compared to 42,000 the year before.

Sheep and lambs went up 6 percent to a total 604,000 head as of January 1, 1979. This is the highest estimate since 1974. Of this total, 49,000 head were on feed for slaughter market, also highest since 1974. The 1978 wool production was estimated at 5,092,000 pounds, 9 percent above that of 1977. Number of head shorn reached 532,000 in 1978, compared to 496,000 the year before. Average fleece weight was 9.6 pounds in 1978, slightly above the 9.4 pounds in 1977. The average price per pound for wool in 1978 was 73 cents, thus the total value of production was 3,717,000 dollars. Both, price per pound and value of production are highest since 1973. Hogs and pigs reached the lowest level since estimates as of December 1 began back in 1967. There were 50,000 head estimated as of December 1, 1978, same number estimated in 1967. Value per head, however, estimated at 66.50 dollars is the second highest on record. Total inventory value at 3,325,000 dollars is the fourth highest on record.

Chickens were estimated at an all time record high 2,110,000, as of December 1, 1978. Of these, 1,547,000 were hens and pullets of laying age, also a record high; and 561,000 were pullets not of laying age. Egg production totaled 359 million eggs of which 358 million were sold at an average price of 57 cents for a total of 17,005,000 dollars in cash receipts. Both, egg production and cash receipts are the highest estimates on record.

Commercial red meat production from slaughter plants in New Mexico - including federally and state inspected, and custom exempt - totaled 321.4 million pounds (dressed weight) in 1978. This estimate is the fourth highest on record, and 41.3 million pounds below last year's record high of 362.7 million pounds. Number of animals slaughtered during 1978 and 1977 were, in that order: Cattle - 539,400 and 573,600; hogs - 29,200 and 84,400; sheep and lambs - 82,500 and 85,700.

Milk production was estimated at 458 million pounds in 1978, highest on record. Average production per cow at 13,879 pounds is another record high and 137 pounds above last year's previous record. Average number of milk cows increased to 33,000 during 1978. The farm value of milk produced was estimated at \$54,365,000 in 1978, compared to \$48,266,000 in 1977.
