WEATHER SUMMARY

There were a few light rain showers in far northeast New Mexico early Monday morning. Breezy to windy conditions returned to New Mexico on Tuesday and Wednesday as an upper level low pressure system pushed into the Northern Rockies. Isolated severe thunderstorms developed Tuesday evening in the Eastcentral and Southeast Plains. Even stronger winds developed across the state on Wednesday. A large area of high pressure dominated New Mexico from late in the week through the weekend...allowing for above normal temperatures. Several locations broke record high temperatures during the weekend. New records on Sunday included 104 degrees in Portales and 84 degrees in Cloudcroft. Las Vegas and Carlsbad tied their record high temperatures at 92 and 106 degrees respectively.
