AGRICULTURAL SUMMARY: Warmer than normal temperatures blanketed much of New Mexico during the week, with weekly recordings in portions of the southeast climbing to 12 degrees above average. Highs over the century mark were common throughout the south. Rainfall was recorded at most weather stations, keeping year-to-date totals above normal and aiding crop development. Hay quality and harvest progress suffered as the result of additional moisture. Most notably, precipitation totaling 3 inches or more fell in Capulin, Roy, and Tucumcari. Hail damage in all crops was reported as 4 percent light and 4 percent moderate. Wind damage in all crops was reported as 7 percent light and 2 percent moderate. Stock water supplies were reported as 4 percent very short, 20 percent short, 75 percent adequate, and 1 percent surplus.
