PO Box 1809, Las Cruces, NM 88004

## CROP PROGRESS AND CONDITION <br> WEEK ENDING JUNE 9, 2019

AGRICULTURAL SUMMARY: Temperatures were about average across the State, while precipitation remained exceedingly scattered during the week, with most of the counties along the western border receiving less than 50 percent of their normal moisture, according to the Mountain Regional Field Office of the National Agricultural Statistics Service, USDA. Reports from Grant and Luna Counties noted that drought conditions were worsening, with grass production from native pastures at levels less than adequate to support livestock. In the northwest, comments indicated that row crops were still being planted even though cool overnight temperatures remained in some locations. As a result, crop emergence lagged behind normal in certain areas. It was noted that the corn crop in Union County was planted, although the total acreage appeared to be less than in recent years due to the cost of production inputs and crop prices. Hay harvest was in full swing across much of the State, with 70 percent of the alfalfa hay reported in good to excellent condition, compared with 64 percent last year, and a 5 -year average of 66 percent. Reports of high winds and hail were received from several counties, but crop damage totals were not yet available since assessments were still ongoing. Statewide, 73 percent of the pecan crop was reported in good to excellent condition, compared with 77 percent last week, 96 percent last year, and a 5 -year average 88 percent. The United States Drought Monitor released on June 6 noted that the State remained free of exceptional, extreme, and severe drought (D4-D2), while moderate drought (D1) was present across 18.9 percent of the State, unchanged from last week. Overall, conditions rated abnormally dry or worse were evident across 34.8 percent of the State, a slight decrease of 0.6 percentage points when compared with last week. Drought-free conditions covered 65.2 percent of the State. Topsoil moisture levels were reported as 52 percent adequate to surplus, compared with 47 percent last week, 23 percent last year, and a 5 -year average of 39 percent. Pasture and range condition was reported as 28 percent good to excellent, compared with 27 percent last week, 6 percent last year, and a 5 -year average of 25 percent. Hail damage in all crops was reported as 6 percent light and 6 percent moderate, compared with 3 percent light and 4 percent moderate last week. Wind damage in all crops was reported as 10 percent light, 10 percent moderate, and 4 percent severe, compared with 14 percent light, 14 percent moderate, and 4 percent severe last week. Stock water supplies were reported as 15 percent very short, 25 percent short, 59 percent adequate, and 1 percent surplus, compared with 18 percent very short, 29 percent short, 52 percent adequate, and 1 percent surplus last week.
