## CROP PROGRESS AND CONDITION WEEK ENDING NOVEMBER 10, 2019

AGRICULTURAL SUMMARY: Cold overnight temperatures and season-ending frosts and freezes were happening across much of the State, pushing producers to stay busy harvesting the last of their row crops and preparing their livestock for winter, according to the Mountain Regional Field Office of the National Agricultural Statistics Service, USDA. Light precipitation was measured across the southern two-thirds of the State, but did little to impact fieldwork. Harvest for chile, corn, and cotton showed progress of 15 percentage points or more during the week, while 94 percent of the peanut crop had been dug and combined, well ahead of both last year and the 5-year average. In Union County, dryland wheat showed signs of drought stress and fire danger was high. Elsewhere, pecans were being harvested in Dona Ana and Lea Counties. Reports from Eddy County suggested that a larger percentage of the pecan crop in the area seemed to be stick-tights - non-developing pecans that will never split - this season. The United States Drought Monitor released on November 7 noted that the State remained free of exceptional and extreme drought (D3 and D4) despite a below average monsoon season and prolonged dryness in many areas as winter approaches. Severe drought (D2), moderate drought (D1), and abnormal dryness (D0) remained entrenched across 8.7, 26.0, and 30.1 percent of the State, respectively, all unchanged from last week. Overall, conditions rated abnormally dry or worse were evident across 64.7 percent of the State. Drought-free conditions were present across 35.3 percent of the State, with the area mostly limited to the southeast. Topsoil moisture levels were reported as 42 percent adequate to surplus, compared with 42 percent last week, 71 percent last year, and a 5 -year average of 56 percent. Pasture and range condition was reported as 24 percent good to excellent, compared with 25 percent last week, 16 percent last year, and a 5 -year average of 35 percent. Hail damage in all crops was reported as 1 percent light. Wind damage in all crops was reported as 5 percent light and 2 percent moderate. Stock water supplies were reported as 20 percent very short, 35 percent short, 44 percent adequate, and 1 percent surplus, compared with 6 percent very short, 22 percent short, 71 percent adequate, and 1 percent surplus last year. Hay and roughage supplies were reported as 30 percent very short, 29 percent short, 40 percent adequate, and 1 percent surplus, compared with 9 percent very short, 25 percent short, and 66 percent adequate last year.
