## CROP PROGRESS AND CONDITION WEEK ENDING NOVEMBER 8, 2020

AGRICULTURAL SUMMARY: Despite precipitation in some areas again this week, harvest remained active across all crops, according to the Mountain Regional Field Office of the National Agricultural Statistics Service, USDA. With precipitation confined mostly to central and western locations, converted moisture totals - accounting for any precipitation received as snow - ranged from a trace to as much as 3 inches. Temperatures during the same period were warmer than normal. With pasture grass depleted in many areas, the amount of supplemental feeding needed to sustain livestock continued to creep higher, with current estimates for cattle and calves 12 percentage points higher than last year and 24 percentage points higher than normal. Triticale and wheat continued to be planted. Reports from Chaves County noted that up to 12 inches of snow was received during last week's storm, leading to some concern from pecan growers over the affects that the cold temperatures potentially had on trees. According to the United States Drought Monitor released on November 5, drought conditions changed only slightly from last week. Moderate drought (D1) covered 15.2 percent of the State, severe drought (D2) was present across 18.6 percent, extreme drought (D3) covered 59.0 percent, and 7.2 percent of the State was categorized in exceptional drought (D4). Topsoil moisture levels were reported as 80 percent short to very short, compared with 80 percent last week, 58 percent last year, and a 5 -year average of 45 percent. Pasture and range condition was reported as 42 percent poor to very poor, compared with 37 percent last week, 43 percent last year, and a 5 -year average of 29 percent. Hail damage in across all crops was reported as 1 percent light. Wind damage across all crops was reported as 5 percent light and 5 percent moderate. Hay and roughage supplies were reported as 21 percent very short, 43 percent short, and 36 percent adequate, compared with 22 percent very short, 38 percent short, 38 percent adequate, and 2 percent surplus last week. Stock water supplies were reported as 22 percent very short, 42 percent short, and 36 percent adequate, compared with 20 percent very short, 41 percent short, and 39 percent adequate last week.
