NC sweet potatoes

The Vegetable with Super Food Power!

The sweet potato is truly a vegetable with super food power! Just underneath the thin brownish orange skin is a powerhouse of nutrition, flavor and versatility. From the smallest of children to the eldest of adults, the sweet potato's naturally sweet taste and superior healthfulness makes it the perfect accompaniment to any meal. North Carolina farmers not only produce more sweet potatoes than any other state but provide stimulus to our state's economy.

North Carolina has been growing sweet potatoes since the days of our nation's founding fathers. During our country's formative years, sweet potatoes were grown in garden plots solely for homestead usage. Today, our farmers harvest around 64,000 acres of sweet potatoes annually for markets within the USA and around the globe. As North Carolina's "Official State Vegetable" we rank first among fruit and vegetable crops and 8th in percentage of sales of other commodities. This lowly vegetable has become an economic dynamic with a farm gate value of $226.5 million in 2011 that translates to an economic boost to our state of roughly $550 million and job opportunities for almost 7,000 people.

We attribute our progress to three basic resources:

Our People: North Carolina's 450 sweet potato farmers are diverse, resourceful and progressive. While sweet potatoes are but one of many crops produced on our soil, growers seek out and utilize the proven farming technologies and resources in horticultural practices, marketing prowess, environmentally-friendly storage facilities, cropping innovation and logistics to bring to America's plates wholesome, delicious sweet potatoes every month of the year.

Our Environment: Sweet potatoes are tropical vegetables and require a moderate climate such as we have in North Carolina. Geographically located approximately 2,000 miles from the equator and on the eastern portion of the United States; North Carolina's climate and location is ideal for the production of flavorful sweet potatoes as well as having a short transit time to 50% of the USA's population as well as the markets in the United Kingdom and Western Europe. We are ever conscious that we must continue to be good stewards of our land and farming practices in order to maintain consumers' trust. Therefore, we employ good agricultural practices with its accompanying certification and ongoing education.

Our Associations: Since its inception in 1961, the North Carolina SweetPotato Commission and the grower membership have partnered with the NC Department of Agriculture and Consumer Services to expand markets for North Carolina sweet potatoes both domestically and internationally. We have also monetarily supported basic research and extension programs at NC State University at the county and state levels in plant breeding; state of the art seed production; advanced weed suppression and insect biological control; newer frontiers of research technology such as sweet potatoes' functionality as a medicine for human health are being explored. Our progress is synergistic to our alliances with others.

North Carolina sweet potatoes are a super food that is leading the nation and feeding the world.

Sue Johnson-Langdon
Executive Director, North Carolina SweetPotato Commission

STATISTICAL REPORTS PROGRAM

The North Carolina Field Office of USDA's National Agricultural Statistics Service compiles current and historic statistics concerning agriculture in the State. Where possible, information most often requested by farmers, the general public, and workers in government agencies are included. Reporting of crop and livestock statistics is a service provided to farmers and others in the State by the National Agricultural Statistics Service of the U.S. Department of Agriculture in cooperation with the North Carolina Department of Agriculture and Consumer Services. The collection and dissemination of agricultural statistics had its start in 1863. This is one of the oldest activities of the United States Department of Agriculture. It was recognized that there were many advantages of a joint relationship between the State and Federal Governments in the development of agricultural statistics. In 1919, the N.C. Department of Agriculture entered into a cooperative agreement with the U.S. Department of Agriculture to provide detailed agricultural statistics. The agreement resulted in the creation of the Agricultural Statistics Division of the North Carolina Department of Agriculture and Consumer Services. The North Carolina Field Office of USDA's National Agricultural Statistics Service publishes official statistics on crops, livestock, prices, and various other agricultural items. The most important reports and the approximate dates of releases are shown in the table below. The reports marked with an (*) are issued separately and are only available at **www.ncagr.gov/stats**. All others are included in the monthly release entitled "Farm Report." These reports are free and available by writing to: Director, Agricultural Statistics, P.O. Box 27767, Raleigh, NC 27611 or E-mail at: **ncagstat@ncagr.gov**. Current and historical data series can be found at **www.nass.usda.gov**, and using the "Quick Stats" feature.

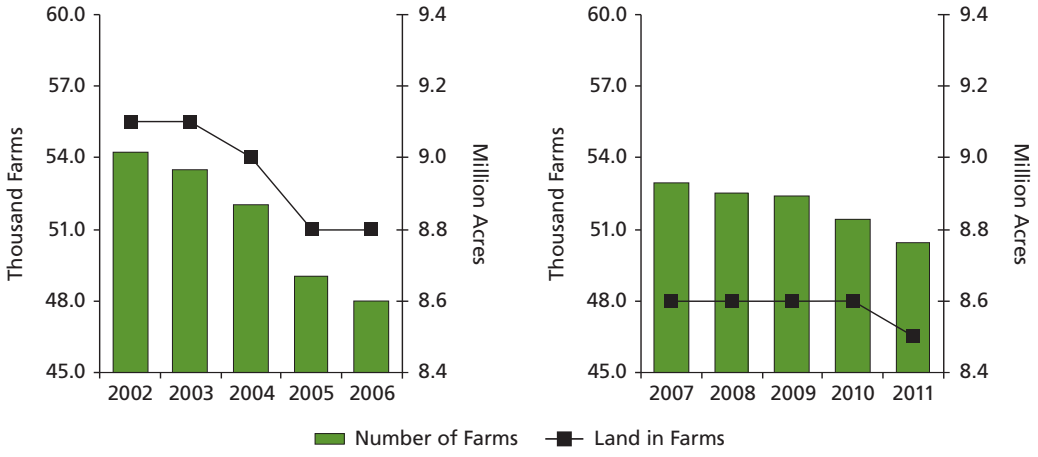
[1] *A farm is any establishment from which $1,000 or more of agricultural products were sold or would normally be sold during the year.*

NUMBER OF FARMS AND LAND IN FARMS [1]



[1] *The 2007 Census of Agriculture established a new farm number base due to methodological changes that allowed a more accurate count of small farms.*

2011 WEATHER SUMMARY

The year began with very dry conditions. In February, North Carolina saw below normal precipitation and above normal average temperatures. On February 22nd, soil moisture levels were rated at 8% very short, 35% short, 54% adequate and 3% surplus. On February 23rd, 27 counties were designated as having severe drought, 28 moderate drought and 30 were classified as abnormally dry by North Carolina's Drought Management Advisory Council (DMAC). As spring rolled around, more precipitation was seen throughout much of the state, but temperatures were still above normal in most areas. The increased precipitation and warm temperatures did help small grain conditions. On Saturday, April 16th, 2011, tornados swept across Eastern and Central North Carolina, causing tremendous loss of human life, crops and property. Late spring/ early summer started the trend of lower precipitation and higher temperatures, which hurt some crops during a critical growing stage. Soil moisture was mostly in the short to adequate range, with some areas not having enough moisture to plant soybeans and peanuts until late. During the summer months, soil moisture was depleted because of the extreme heat and little rainfall. On June 26th, statewide soil moisture levels were rated at 24% very short, 38% short, 34% adequate and 4% surplus. By July 26th, 11 counties were designated as having extreme drought, 21 in severe drought, 21 moderate drought and 16 were classified as abnormally dry by DMAC. Excessive heat and little rainfall caused stress on corn and soybeans in many areas, and some tobacco farmers had started to irrigate. On Saturday August 27th, Hurricane Irene hit Eastern North Carolina, causing extensive damage to crops, equipment and buildings, as well as flooding in some areas. Cooler drier weather was seen in October, but it was not long before temperatures went back to above normal in most areas to finish out the growing season.

DEFINITIONS & METHODOLOGY

Cash receipts for agricultural commodities are defined as the gross income from sales of crops, livestock, and livestock products during a calendar year. The USDA, Economic Research Service (ERS) uses USDA, National Agricultural Statistics Service (NASS) estimates to develop state level cash receipts. The county level cash receipts in this publication are based on the ERS state level cash receipts and various county data. To ensure respondent confidentiality, estimates at any level, including county estimates, are not published if those estimates would disclose any information about individual operations. More information about ERS and NASS data can be found at the following websites:

http://www.ers.usda.gov/Data/FarmIncome
http://www.nass.usda.gov/Data_and_Statistics/

Source: Economic Research Service, USDA

[1] Value of agricultural sector production is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization or Economic Cooperation and Development.

[2] Includes repair and maintenance of capital items, machine hire and customwork, marketing, storage, and transportation, contract labor and miscellaneous expenses.

MONTHLY PRICE RECEIVED FOR CORN
(Dollars per Bushel)

US 2011	**107,489**	**180,593**	**939,323**	**81,254**

[1] Excludes commercial broilers. [2] Includes rendered, died, destroyed, composted, or disappeared for any reason except sold during the 12-month period.

HONEY
Production, Stocks and Value

Year	Honey Producing Colonies [1]	Yield per Colony	Production	Stocks December 15 [2]	Average Price per Pound [3]	Value of Production [4]
	Thousands	*Pounds*	*Thousand Pounds*	*Thousand Pounds*	*Dollars*	*Thousand Dollars*
2007	12	45	540	76	2.49	1,345
2008	12	52	624	137	2.18	1,360
2009	11	45	495	84	2.57	1,272
2010	13	46	598	144	2.66	1,591
2011	**14**	**62**	**868**	**95**	**2.82**	**2,448**
US 2011 [5]	**2,491**	**59.6**	**148,357**	**36,761**	**1.73**	**256,509**

[1] Honey producing colonies are the maximum number of colonies from which honey was taken during the year. It is possible to take honey from colonies which did not survive the entire year. [2] Stocks held by producers. [3] Average price per pound based on expanded sales. [4] Value of production is equal to production multiplied by average price per pound. [5] Due to rounding, total colonies multiplied by total yield may not exactly equal production.
