Weather conditions for the week were unseasonably warm and dry. Hay producers took advantage of the conditions and most of the first cutting hay has now been harvested with no rain. Corn planting is nearing completion while vegetable planting is still in full swing.

Tobacco transplanting continued. Some growers are reporting problems with hot soils drying out the transplants at the soil line, causing galls in the stems. Corn is up and growing, but needs more moisture. Soybean planting continued, with most early acres planted. There will be more fields planted through late June, though. Pastures and hay fields are still in good shape, with hay field recovery better than expected considering the heat and dry weather we are experiencing. We have had a few pop-up showers, but no significant rainfall during the week.

Extremely dry conditions with no rainfall coupled with unseasonably hot, dry conditions limiting planting. Corn suffering ed yield potential.

Weather conditions for the week were unseasonably warm and dry. Hay producers took advantage of the conditions and most of the first cutting hay has now been harvested with no rain. Corn planting is nearing completion while vegetable planting is still in full swing. Stanley Holloway – Yancey County Extension
