# Ohio Agriculture...

...puts food on our plates.

...provides jobs, supports producers, and is the cornerstone of the state's economy.

...is part of our proud heritage and supports local communities.

...provides a self-sufficient way for Ohioans, and all fellow Americans, to have access to food and fiber products.

...is leading us into the future with the use and production of bio-based fuels and bio-products.

As Director of the Ohio Department of Agriculture, I look forward to running our agency as cost effectively as possible and in taking a common sense approach to enforcing regulations.

You can count on seeing the Department focused on our core mission of food safety, and you will see that we will take head-on those issues critical to improving the business climate in our state for farmers and agribusiness.

During my first week on the job I met with the directors of Ohio EPA and the Ohio Department of Natural Resources to address environmental concerns at Grand Lake St. Marys. In fact, the three of us went that week to Grand Lake St. Marys to hear from local community leaders about the locally-developed solutions they were advocating for lake improvement.

Our goal also has been to complete the work of the Ohio Livestock Care Standards Board in establishing and enacting species-specific rules which fulfill the expectations of Ohioans who overwhelmingly passed State Issue 2 in 2009. We've done that work and a comprehensive set of Ohio's first livestock care standards will become effective by the end of 2011.

We have much to be thankful for in this state. Due to the hard work and creativity of our farmers, our state produces a wide array of crops and livestock which serve as the foundation of our \$98 billion food and agriculture industry which employs one out of every seven Ohioans.

Governor Kasich has made it clear that he believes that the agriculture industry will lead the way out of this economic downturn. Agriculture is already Ohio's largest industry, but there is still greater potential for further growth. We are currently meeting with successful agribusiness owners to develop ways to create even more opportunities in our state to employ more Ohioans through agriculture.

But for this to be successful over the long haul, we need to keep people involved in agriculture. One of the ways we hope to do that is through the "Ag is Cool" program. Working with the Ohio State Fair and the Ohio Farm Bureau Federation, fourth grade students will be able to use their report cards as a free admission ticket for themselves and an adult to the Ohio State Fair. We've established several educational and interactive stations around the fairgrounds and they also have the opportunity to win one of four \$500 scholarships.

I'm proud of the management team we've put together at ODA, just as I'm proud of the work of our field staff who inspect large livestock farms, dairy farms, test milk, and processing plants, as well as the work of our veterinarians, laboratory scientists and administrative staff.

I look forward to the coming months as we work together to protect and promote Ohio's most important industry.

Sincerely,  
James Zehringer  
Director

I am pleased to present the 2010 Ohio Department of Agriculture Annual Report and Statistics. This is the twenty-sixth edition issued jointly by the Ohio Department of Agriculture and the Ohio Field Office of the National Agricultural Statistics Service, but it represents the 93rd time since 1918 that an annual agricultural statistics publication has been issued for Ohio. It is my final letter because I will retire before this is published. This publication will be available only on-line or on Compact Disk (CD). Printed copies are no longer available for distribution. It can be found on-line at [www.nass.usda.gov/oh](http://www.nass.usda.gov/oh) or at [www.agri.ohio.gov](http://www.agri.ohio.gov).

In Ohio, 2010 record lows were recorded for the production of grapes, potatoes and burley tobacco. For potatoes and tobacco, that was the result of the fewest acres ever harvested in Ohio. Prices farmers received for their products were above 2009 levels for corn, soybeans, wheat, potatoes, apples, hogs, cattle, sheep and milk. Planting conditions were generally favorable during the early spring but turned wet in early May. Precipitation during June, July and August was at or below normal levels across most of the state. Rainfall during the fall was generally below normal which provided near ideal harvest weather for the corn and soybean crops.

Prices received by farmers for grain crops were generally higher than during 2009 near historically high levels. Prices for cattle, hogs, eggs and milk were also higher than during 2009. The prices farmers paid for inputs, primarily those for fuel, fertilizer and pesticides were on par with those paid in 2009 due largely to steady prices for petroleum and the products made from petroleum.

Thanks to all who helped us provide the important information for this publication by completing one or more survey questionnaires during 2010. Accurate and timely data are essential for good decision making and a healthy agriculture industry. This information assists producers and industry officials in making the best possible decisions even with the uncertainty of factors like weather, production input costs, market conditions, farm policy, consumer expectations and international trade. It is our mission to ensure that Ohio producers are equipped with the best available data to address these and other issues. Special thanks are also extended to the many businesses and organizations in the State who continually strive to improve the information flow to producers and policy makers. They play a vital role in the business of agriculture. Our job would be much more difficult without their help and good will.

All of the data in this publication and much more can be found on the Internet at <http://www.nass.usda.gov/> in the "Quick Stats" database. This is a growing database from which you can quickly obtain production and price statistics from as early as 1866 for some commodities and for nearly all commodities since 1973. All of the data from the 2007 Census of Agriculture and for most of the follow-on studies are available. Data from the 1992, 1997, and 2002 Census of Agriculture are also available. You can get free on-line subscriptions to many U.S. and Ohio reports so they are delivered to your email box as soon as they are released. Just click on "Receive reports by Email" then on "National" or "State" under the Receive NASS Updates banner in the lower right portion of the page and select the reports that you wish to receive.

The Internet has become a key source for information and statistics about U.S. agriculture, but it can sometimes be frustrating. If you need assistance in finding facts about agriculture, we may be able to help. Give us a call or send an email message. We love hearing from you.

Sincerely,  
James E. Ramey  
Director, National Agricultural Statistics Service, Ohio Field Office

# Ohio Department

The mission of the Ohio Department of Agriculture is to protect Ohio citizens by ensuring the safety of the state's food supply and the health of Ohio's food animals and plant life, and to create economic opportunities for Ohio's farmers, food processors and agribusinesses.

# of Agriculture

The Ohio Department of Agriculture provides leadership for Ohio's No. 1 industry – food and agriculture – to create greater, sustainable economic opportunity for Ohio's farmers and processors; to preserve and enhance Ohio's bountiful resources; and to partner with Ohio's research institutions to further the development of new agricultural products and services. The department administers numerous regulatory, food safety and consumer protection programs for the benefit of all Ohioans and helps build marketing opportunities for Ohio farmers and food processors.

The department's workload is divided among the following divisions and programs: Administration, Amusement Ride Safety, Animal Industry, Consumer Analytical Laboratory, Dairy, Enforcement, Farmland Preservation, Food Safety, Livestock Environmental Permitting, Marketing, Meat Inspection, Ohio Grape Industries, Plant Industry and Weights and Measures.

## Senior Administrators

*Senior Staff (pictured below). Row 3 (left to right): Dr. Michael Hockman, Nathan Aichele, Kevin Elder, Bill Hopper, Dr. Tony Forshey, James Ramey (USDA National Agricultural Statistics Service, Ohio Field Office Director), Roger Tedrick, Rick Corbin, Steve Swain, Gary Hill, Tom Johnston, Matt Beal.*

*(Not Pictured: Andy Ware)*

## Ohio Livestock Care Standards

One of the greatest assets to the agriculture industry is people. If we are going to maintain the great engine that is keeping our state moving, we are going to need skilled people to do it.

With the wide range of agricultural careers available today, there is a tremendous need for young people to train for these careers to help the future of agriculture.

If we are to keep our workforce filled with qualified people, we need to align and rejuvenate youth interest.

The governor wants young people to know that "Ag is Cool." The Ohio Department of Agriculture will work with the Ohio State Fair and Farm Bureau to help promote ag education to 4th graders. Those leaving the 4th grade this year can bring their grade cards that will get them and an adult into the fair for free. Once they are there they will visit 6-8 agricultural stations across the fairgrounds and have the opportunity to win one of four \$500 scholarships.

Ohio's new standards for livestock care will become effective by Fall 2011. These standards stem from State Issue 2, which Ohio voters passed in November 2009, creating the Ohio Livestock Care Standards Board. The board and supporting committees met many times over an 18 month period to develop the state's new comprehensive standards for livestock care.

The new standards apply to all species of livestock raised for food and fiber. The standards govern all aspects of animal care, such as water, food, handling, housing, management, medicine, transportation and humane euthanasia.

Producers and consumers can be proud of Ohio's leadership in establishing the most comprehensive livestock care standards in the nation. As these new standards take effect, it is the department's intent to work with producers to educate them on the new standards, and to help them identify steps needed to keep their farm in compliance.

The answer to many of our economic challenges lies in the fields of Ohio's farmers.

The governor has made it clear that he wants to support the agriculture industry in leading us out of this recession. The Ohio Department of Agriculture is working with producers to help reduce barriers to our agribusinesses and to provide support to projects that will spur economic development.

There are approximately \$1.2 billion worth of Ohio agriculture-related economic development projects in various stages of development.

An exporter from Florida is relocating its cattle and hog export operations to Wilmington Air Park in Wilmington. The facility is becoming a USDA export facility to prepare animals for export by air shipment.

Dannon Yogurt is completing a major capital expansion in Minster which will add 100 employees to the existing 400 jobs over the next 3-4 years.

## Celebrating Ohio Agriculture Day

*Lt. Governor Mary Taylor and Ohio Department of Agriculture Director James Zehringer met with agriculture representatives and community business leaders at Nutek Green in Glenwillow to celebrate Ohio Agriculture Day.*

*The celebration focused on bioproducts and how the agriculture industry includes diverse products beyond food production. It also highlighted the importance of agribusiness to the state's economy.*

*Nutek Green is a Cleveland-area agribusiness that uses Ohio soybeans to produce 100 percent biodegradable cleaners, lubricants, and other household products. Nutek Green's products are on the shelves of well-known stores including Home Depot, Ace Hardware, True Value, Kroger, and Northern Tool.*

Veterinarians and scientists in the Animal Industry Division help protect the health and safety of Ohio's livestock industry. Animal Industry staff provides quick response in the event of an animal disease outbreak, provides ongoing tests and inspections of livestock to verify the absence of disease, and controls and eradicates infectious animal diseases in Ohio.

Staff licenses and inspects livestock dealers, weighers, renderers, raw rendering collectors and garbage feeders. Staff also actively participates in a number of federal cooperative agreements with the USDA's Animal and Plant Health Inspection Service and the Food and Drug Administration relative to national disease control programs: Johne's disease, scrapie, bovine spongiform encephalopathy (BSE), foreign animal disease, exotic newcastle disease, avian influenza, chronic wasting disease, premise and animal identification, tissue drug residues, and exhibition livestock inspection and testing. Division staff members work closely with the Ohio Poultry Association through the Ohio Egg Quality Assurance Program to reduce consumer exposure to *Salmonella enteritidis*.

The division administers the Animal Disease Diagnostic Laboratory, which provides regulatory testing support for disease control programs and full diagnostic laboratory services for veterinarians, livestock producers and agribusinesses. It is one of only 41 accredited laboratories in the United States. As the only accredited laboratory in the state of Ohio, the lab operates under guidelines that ensure the quality of personnel, facilities and procedures.

This laboratory serves as a participating member of the National Animal Health Laboratory Network, providing high-caliber diagnostic testing support in a number of animal disease situations and provides surge capacity for the nation in the event of a regional or national animal disease outbreak.

In 2010, the Animal Industry division staff worked closely with the U.S. Department of Agriculture to perform traceback investigations as part of the nationwide effort to locate, quarantine, and test cattle which tested positive for bovine tuberculosis.

Bovine tuberculosis is a contagious, infectious, communicable disease of animals and humans. It is commonly a chronic, debilitating disease but occasionally may assume an acute, rapidly progressive course. It is widespread and affects nearly all species of vertebrates. The disease can be spread by direct contact, inhalation of droplets from infected lungs, and ingestion of contaminated feed or milk. There was no known human illness associated with this occurrence.

Animal Disease Diagnostic Laboratory staff performed a necropsy (animal autopsy) on a Thoroughbred horse that had been exhibiting signs of neurological illness and died at an Ohio racetrack. A quarantine was immediately placed on the racetrack after laboratory test results from the necropsy substantiated the presence of the equine herpes virus 1 (EHV -1) organism. During the course of the outbreak, the Ohio Department of Agriculture confirmed the organism in two additional Thoroughbred horses that died at the track exhibiting the same symptoms.

The EHV-1 organism can spread quickly from horse to horse and can cause three different forms of disease: rhinopneumonitis (a respiratory disease of young horses), abortions in pregnant mares, and the neurological disease EHV-1 myeloencephalopathy, which can be fatal to horses. The stricken horses at the racetrack showed symptoms of the neurological form. The virus is not a human health threat.

Thanks to cooperative efforts by both Division of Animal Health inspectors and veterinarians, and the professional staff of the racetrack, the outbreak was quickly contained.

*Scientists in the Animal Disease Diagnostic Laboratory are a critical component in safeguarding the state's multi-billion dollar livestock industry.*

Animal Health Division staff were active in response to positive test results from Equine Piroplasmosis that was conducted at the National Veterinary Services Laboratory in Ames, Iowa. Equine Piroplasmosis is a blood-borne parasitic disease in which the protozoa reside in red blood cells. The disease is transmitted by ticks.

The positive horse was located and a confirmatory test performed. An additional positive horse was located on the same farm while testing 20

additional horses. The two positive horses were isolated on the farm and follow-up testing provided assurance that no other horses were infected on the test. Both positive horses were imported from Spain prior to 2005, when the import test requirements were changed. Testing was performed on both positive horses with negative results, indicating a probable inability to transmit the disease.

# Ohio Livestock Care Standards

---

**O**hio agriculture is once again leading the nation. This time, it is in the area of livestock care.

Ohio's new standards for livestock care will become effective in summer 2011. These standards stem from State Issue 2, which Ohio voters passed in November 2009, creating the Ohio Livestock Care Standards Board. The Board and supporting committees met many times over an 18 month period to develop the state's new comprehensive standards for livestock care.

The new standards apply to all species of livestock raised for food and fiber, including: swine, poultry, dairy cows, beef cattle, veal, sheep, goats, llamas and alpacas. The care standards also apply to horses, ponies, mules and donkeys.

The standards govern all aspects of animal care, such as water, food, handling, housing, management, medicine, transportation and humane euthanasia.

Ohio's livestock care standards will be enforced by the Ohio Department of Agriculture's Division of Animal Health.

Producers and consumers can be proud of Ohio's leadership in establishing the most comprehensive livestock care standards in the nation. As these new standards take effect, it is the department's intent to work with producers to educate them on the new standards, and to help them identify steps needed to keep their farms in compliance.

The livestock care standards are practical for livestock producers of all sizes and production methods and will not only assure better livestock care, but will also support the state's goals of promoting safe and affordable food, and helping to prevent the outbreak of animal and human diseases.

---

Under Ohio law, all amusement rides must be inspected and licensed before operating to ensure they are assembled, maintained, and operated in a manner that will minimize the possibility of accidents or injuries to the riding public. The Ohio Department of Agriculture’s Amusement Ride Safety Division inspectors are responsible for the safety and regulation of all Ohio rides. The inspectors evaluate everything from the structural safety and warning signs to general ride operations. Inspectors also license go-kart tracks and water parks. Ohio was the first state to enact a Rider Responsibility Act that stresses the consumer’s role in amusement ride safety. In addition to amusement ride inspection, the division ensures that midway games of skill and side shows operating at all 94 county and independent agricultural fairs and the Ohio State Fair are fair and properly operated.

In 2010, department staff licensed 64 permanent amusement parks, which included 29 go-kart facilities and 19 water park facilities and family centers. Department staff also inspected 304 portable ride companies. Department staff inspected, licensed and maintained records on all 3,223 amusement rides and 670 games in the state. By law, all amusement rides must be inspected and licensed before operation to help assure they are assembled, maintained and operated according to manufacturer’s recommendations and specifications. State inspectors also perform random, mid-season inspections on amusement rides.

Inspectors monitor ride structure and operations. Structural integrity, electrical safety, hydraulic systems, brakes, tubs, sweeps, warning sign displays and general ride operations are all thoroughly checked. In addition to inspecting amusement rides, the division also helps assure the fairness of midway games and side shows at the Ohio State Fair and all 94 county and independent fairs.

In 2010, staff worked on several major initiatives to improve the safety of the industry, including: increasing the number of unannounced inspections of rented inflatable rides; working with the Amusement Ride Safety Board on proposed new rules pertaining to water quality for indoor and outdoor water parks; revising and updating water park rules; working on legislation to better define licenseable amusement rides; and conducting go-kart seminars.

Rides Licensed .....	3,223
Games and Concessions Licensed .....	670

The Consumer Protection Laboratory is Ohio's premier food and agriculture testing lab and carries out an important component of the department's mission to protect the public. Scientists test food, feeds, fertilizers, pesticides and animal exhibition and race track samples. The lab houses the official Equine Drug Testing Laboratory for the Ohio State Racing Commission. As a member of the FDA/USDA-sponsored Food Emergency Response Network, it is the state's primary emergency response lab for biological and chemical terrorism in food and environmental products. The Consumer Protection Laboratory also provides consumer protection and helps assure the safety of Ohio's food supply, agricultural products and animal competitions and exhibitions.

The Consumer Protection Laboratory has a major role in detecting human foodborne illness outbreaks and works with FDA and the Centers for Disease Control during these investigations.

In April 2010, romaine lettuce was implicated in a multistate outbreak involving E.coli O145. Scientists in the Consumer Analytical Laboratory Microbiology section worked with the department's Food Safety Division to test multiple lots of samples originating from a distributor in Ohio. The laboratory also worked closely with the Centers for Disease Control, FDA and Federal Emergency Response Network to discuss testing strategies to isolate the organism. The laboratory was able to isolate a Shiga Toxin E.coli that was different from the outbreak strain.

The lab analyzes samples originating in the food chain - from the farm, through processing and distribution, to the retail level. Analysts test raw and processed dairy products, meat products, vegetables, fruits, water, environmental samples, animal feed and fertilizer. Analysts in the division's four sections — Microbiology, Pesticide Residue, General Chemistry and the Analytical Toxicology Laboratory — annually perform over 240,000 tests on more than 40,000 samples.

**Pesticide Residue Lab**  
Through a contract with the USDA Pesticide Data Program, the Consumer Protection Laboratory

pesticide residue chemists test 1,500 produce samples for over 80 chemicals annually to verify that pesticides, if present, are safely below harmful levels.

#### Anabolic Steroid Test Program

The Analytical Toxicology Lab (ATL) is the official drug testing lab for the Ohio State Racing Commission (OSRC). The lab provides testing of samples from horses competing at Ohio's seven commercial racetracks and over seventy county fairs for prohibited substances under the OSRC's Medication and Drug Related Regulations. This internationally renowned laboratory provides testing for nearly 10,000 horses annually. In 2010, the ATL initiated tests for detecting Anabolic Steroids in the horses. This testing supports the OSRC's effort to comply with the policies of the Association of Racing Commissioner's International (ARCI) and the Racing Medication and Testing Consortium (RMTC) pertaining to testing for illegitimate use of anabolic steroids in performance horses.

The laboratory has three major competitive federal grants from the FDA and USDA for emergency response in foods. The Consumer Protection

Laboratory provides critical expertise to respond to natural food borne illness outbreaks or intentional introduction emergencies.

Under a grant from the USDA Agricultural Marketing Service Microbiological Data Program, the Consumer Protection Laboratory

According to the Centers for Disease Control, reducing foodborne illness by just 10 percent would keep about 5 million Americans from getting sick each year. Preventing a single fatal case of E. coli O157 infection saves an estimated \$7 million. Shown above, a scientist tests canned tomato paste.

*Scientists in the Consumer Protection Laboratory test food and non-food items daily to assure safety and efficacy.*

Microbiology Section participates in a national program to monitor fresh fruits and vegetables for the presence of pathogenic microorganisms. The program assays fresh fruits and vegetables for Salmonella, E. coli O157:H7 and enteropathogenic E. coli using the latest DNA technology. Results provided to the lab have led to multi-state recalls and the removal of contaminated produce from markets, potentially preventing human illness. Isolate information is uploaded in the CDC/FDA PulseNet program for use by anyone attempting to track and respond to human illness outbreaks.

The Consumer Protection Laboratory's Microbiology and Chemistry Sections test commercial disinfectants for formulation and

microbial efficacy. Staff members also verify the effectiveness of commercially available hospital disinfectants against a variety of bacterial infectious agents and spores.

In 2010, chemists provided analysis of exhibition animals in Ohio's 94 state, county and independent fairs. This program, which is administered by the Division of Animal Industry, is one of the most comprehensive programs in the nation for evaluation of exhibition animals for illegal drugs.

Ohio's Dairy Division is charged with overseeing the production and processing of milk and dairy products by inspecting farms, milk processors, and milk haulers in the state. In addition, all producers' milk and all processed products are sampled each month to ensure a safe and wholesome product. Ohio's dairy farmers and processors reach millions of consumers with a wide range of products, including milk, cheese, butter, cottage cheese, sour cream, and frozen desserts. Ohio's dairy industry accounts for \$7 billion in economic activity.

The basis of the division's Grade A dairy regulatory activities are mandated in accordance with the National Conference on Interstate Milk Shipments and the U.S. Food and Drug Administration. Manufactured Grade inspections and sampling adheres to the U.S. Department of Agriculture regulations, Ohio Revised Code and associated rules.

All farm milk delivered to a processing plant is tested for antibiotics prior to being unloaded, and if laboratory tests reveal a positive result, the entire load must be discarded and not used for human food or animal feed. Individual farm milk samples are further tested at an approved laboratory for antibiotics, bacteria level and somatic cell count. Raw farm milk that meets the rigorous screening and is approved for food processing is sampled and tested by state dairy sanitarians and approved laboratories.

New advances in engineering, animal nutrition, herd and dairy plant management, genetics and animal care, all contribute to Ohio's success as a

dairy-producing state. Ohio continues to be the largest Swiss cheese producer and the 11th largest milk producing state in the nation. Even though cow numbers were down in 2010 by 7,000 animals, milk production was up 1.1 percent. Total milk production for 2010 reached 5.25 billion pounds.

Ohio's dairy industry is diversifying, with a number of on-farm processing enterprises starting during 2010. A total of 20 small artisan cheese making, fluid and yogurt operations were licensed in Ohio with a number more making plans to vertically integrate to add value to their operations.

In 2010, Dairy Division staff partnered with the Food and Drug Administration Milk Safety Branch on a study to examine the extent of pathogens in raw commingled milk. The Food and Drug Administration is scheduled to issue a full report in 2011.

The amount of milk Ohio dairy farmers produced over the last three years would fill Ohio Stadium more than 4 times!

Dannon in Minster, Ohio is the largest yogurt manufacturing plant in the United States. It has experienced significant growth over a 15 year period. Ohio's Dairy Division has been a partner in the journey, as it has regulatory oversight on new technology and progressive operating practices such as extended production runs. Dannon has experienced a 15 percent growth annually over the past 15 years, becoming one of the leading employers in west central Ohio.

Ohio is home to several major milk manufacturers, including Tamarack Farms Dairy in Newark, Ohio; Superior Dairy in Canton, Ohio; and Reiter Dairy in Springfield. These facilities supply some of the state's top grocery chains with milk. Combined, they purchase more than 100 million pounds of milk each month and supply one fourth of the state's milk. These facilities are just a few of Ohio's 19 Grade A (milk) plants that must be inspected four times per year, as mandated by FDA.

Director Zehringer (left) tours Tamarack Farms Dairy in Newark, Ohio. Tamarack is one of nearly 400 Grade A Dairy processors inspected by the Ohio Department of Agriculture.

Middlefield Cheese, a company in Geauga County, is known as a model of efficiency and quality. Each month this facility purchases 46-50 million pounds of milk to produce 12 percent of the nation's Swiss cheese.

The department’s Enforcement Division provides support to the Ohio Department of Agriculture’s regulatory divisions in gaining compliance with Ohio agricultural laws and regulations.

If a business or individual regulated by the department fails to meet state laws or rules, division staff members take appropriate action through notices of violation and warning letters. In severe cases, staff members provide administrative actions and criminal prosecutions. Compliance of food safety regulations is especially important because non-compliance can pose a public health risk.

In calendar year 2010, Enforcement Division staff conducted 356 investigations, 594 random reviews and planned compliance inspections, embargoed 1,623 pounds of misbranded or adulterated products and collected 65 samples of ground beef for E. coli O157:H7 testing.

Division staff members work with the Ohio Veterinary Medical Licensing Board to conduct investigations regarding complaints against its licensees. In addition, enforcement staff members also administer the Ohio Auctioneer Program.

The Auctioneer Program licenses active auctioneers, apprentice auctioneers, special auctioneers, auction firms, auctioneer corporations, partnerships and associations. In 2010, program staff members oversaw 3,265 active licenses.

The Auctioneer Program issues licenses, gives license examinations, and receives and processes complaints against auctioneers. When a complaint is received, the investigation is referred to a department investigator. Once the investigation is complete, the file is reviewed.

# Farmland Preservation

**T**he Office of Farmland Preservation strengthens the base of the state's top industry, food and agriculture. It does this by assisting farmers and local officials with farmland protection efforts and educating the public about the importance of saving Ohio's valuable farmland. The quality and quantity of agricultural commodities produced in our state is dependent upon the land available for farming. Recognizing the fundamental relationship between agricultural commodities produced and the land available for farming, the department strives to maintain the state's agricultural heritage while providing food, energy, products, and jobs.

Between 1950 and 2007, Ohio lost more than seven million acres of farmland, representing nearly one-fourth of Ohio's total land mass. Approximately 343 acres of farmland are lost each day. Office staff members work to slow this rate through programs and options available to farmers.

Two programs, the Clean Ohio Agricultural Easement Purchase Program and the Ohio Agricultural Easement Donation Program, use agricultural easements to protect the land. It is a voluntary, permanent, legally binding restriction placed on a farm. The easement limits the use of the land to predominantly agricultural activity. The land remains under private ownership and management and stays on the tax rolls under current agricultural use valuation. The farmland can be sold or passed along as a gift to others at any time, but the restriction prohibiting non-farm development stays with the land.

Office staff members also provide technical assistance to local municipalities on the Agricultural Security Area Program, administers the Ohio Century Farm program, and hosts the largest statewide gathering addressing farmland protection, the Ohio Farmland Preservation Summit.

The Clean Ohio Agricultural Easement Purchase Program purchases agricultural easements from interested Ohio farmland owners. Awards are issued for up to 75 percent of the points-based appraised value of a farm's development rights. A payment cap is \$2,000 per acre, with a maximum of \$500,000 per farm. All easement transactions are recorded on the property deed and transfer with the land.

Since the beginning of the program, the Office of Farmland Preservation has received approximately 2,200 applications, and with available funding, preserved 208 of those farms, totaling 39,322 acres, including pending offers.

The Ohio Agricultural Easement Donation Program allows land owners to donate development rights of their land to the State of Ohio or local governments for the purpose of protecting productive farmland from conversion to non-agricultural use. Since the signing of the bill, 52 farms have donated easements to the state totaling approximately 6,310 acres.

The Ohio Agricultural Security Area Program authorizes one or more landowners of at least 500 acres of contiguous farmland to request enrollment into an ASA for a 10-year period. Office staff members provide technical assistance to farmers and local officials. Since 2005, more than 27,000 acres have been enrolled.

*The Ohio Century Farm Program honors farms that have remained in the same family for at least 100 years. Currently, 850 farms across Ohio are registered as Ohio Century Farms.*

## Acres Preserved (2010):

Clean Ohio Ag. Easement Purchase Program .....	37 farms, 6,190* acres
Ag. Easement Donation Program .....	3 farms, 310 acres

Total (2001-2010) .....	48,572* acres
Agricultural Security Areas .....	27,455 acres

\* Denotes pending offers

A local Columbus company, Brownie Points, has grown from a one employee, home-based bakery to two locations that employs 12 people. This expansion is due, in-part, to the proactive approach the department's inspectors provide to business owners. Individualized attention, education on state laws, and site visits are just a few of the ways inspectors work with businesses to help get them up and running. In this case, an inspector actually went to the facility before it was purchased to help the business owner work through what would be needed to bring the facility into compliance. On average, the state's nine regional inspectors will do one of these preliminary visits per week just to assist business owners and answer questions.

The Division of Food Safety helps assure consumers are provided foods, over-the-counter drugs, dietary supplements and cosmetics that are safe, unadulterated and honestly presented. Division staff members work toward this goal through regulatory oversight of the wholesale and retail industry and through contracts, partnerships and educational activities with federal, state and local food regulatory agencies.

In 2010 agro-terrorism and food security remained a priority. Staff continued to distribute Food Security Planning Checklist brochures and a Food Processing Establishment Assessment Checklist for wholesale and retail operations. Both efforts help increase awareness of food defense and assist operators in assessing their vulnerabilities. Representatives also participated in several key emergency preparedness activities, including Utility Radiological Safety Board, After Action Working Group and Ohio Homeland Security Strategic Analysis and Information Center meetings.

The Ohio Department of Agriculture and Ohio Department of Health continued their close working relationship to update rules, laws and procedures to assure the safety of the food supply in the state. Staff from both agencies worked together to revamp the cost methodology that is used by local health departments to determine the cost of their retail food licenses. Both agencies also revised the survey methodology. As a result of the

changes to the survey method, the amount of time spent conducting a survey has decreased, allowing more time to provide training to local health departments.

State retail division staff also presented programs addressing farmers' markets, farm markets, cottage foods, home bakeries and labeling across the state. Training and education programs pertaining to Cottage Food Operations were conducted across Ohio.

During the year, the department's wholesale food safety specialists inspected food-processing firms that included food manufacturers, bakeries, canneries, snack food and candy manufacturers, egg processors, soft drink and bottled water producers, seafood processors, shellfish re-packers and re-shippers, and food warehouses including fruit and vegetable distributors. Hazard Analysis and Critical Control Point (HACCP) inspections were conducted at seafood and juice production facilities.

Division staff performed contract inspections for the U.S. Food and Drug Administration and weekly sample collection for the USDA's Pesticide and Microbiological Data Programs. This random sample collection is a vital part of making sure the food we eat is safe. Also in 2010, country-of-origin inspections were performed under contract with the USDA, and staff completed 311 audits of retail food establishments.

The division's food-sampling program activities included routine sampling of processed foods for *Listeria monocytogenes*; cider for *E. coli* O157:H7 and patulin; maple syrup for lead content; fresh produce for *Salmonella*, *Listeria monocytogenes*, generic *E. coli* and *E. coli* O157:H7; water for coliform; and juice products for *E. coli* O157:H7 and *Listeria monocytogenes*.

*87% of Ohio's food manufacturing and processing firms are inspected by the department's Division of Food Safety.*

*All but 5% of Ohio's food manufacturing and processing firms are inspected by the Ohio Department of Agriculture.*

*Division of Food Safety inspectors help make sure food processing facilities are producing safe, unadulterated food that is truthfully labeled.*

Food Safety Division staff also implemented a new registration requirement for all food processing establishments. All wholesale firms that process or warehouse food must now register annually with the division. This makes it easier for staff to track the movement of food firms in Ohio.

In conjunction with the Ohio Department of Health, the Division of Food Safety disseminated 168 food recall notices to local public health officials and the public. The recalls, for a variety of food products, were issued based upon

bacteriological and allergen concerns. Such foods might have caused illness if the foods had been consumed.

The division and the Ohio Department of Health jointly conducted two Retail Food Safety Advisory Council meetings in 2010. These meetings are co-chaired by the directors of agriculture and health with council members representing local health departments, the retail food industry, academia and the consuming public. The council serves as a forum to discuss and resolve issues related to the food safety program.

Ohio's Livestock Environmental Permitting Program protects citizens and the environment by regulating how Ohio's largest livestock farms handle manure and waste water to protect surface and ground water quality, as well as manage flies, rodents and other pests. The program operates on science-based standards that provide optimum protection, while still allowing the facility to thrive.

A total of 176 facilities have been permitted since Aug. 19, 2002, when the licensing authority for large livestock farms was transferred from the Ohio EPA to the Ohio Department of Agriculture.

During 2010, program staff processed 33 permits to large livestock and poultry farms in the state, including 10 Permits to Install and 33 Permits to Operate. Of those, 28 were renewal permits for farms that were issued either a Review Compliance Certificate or a Permit to Operate by the Ohio Department of Agriculture in 2003 or 2004. Initial permits issued by the department allowed farms to operate for five years. After that time, farm owners are required to apply for a Permit to Operate renewal, which is also valid for five years.

At year-end 2010, 18 farm owners had submitted permit applications and were in the process of seeking a draft Permit to Install or a draft Permit to Operate.

During the year, environmental inspectors conducted 368 inspections. Of those, 339 were routine inspections of operating facilities, 23

were partial inspections, five were construction inspections, and one was a closure inspection.

Inspectors responded to 17 complaints during 2010. Of those, six were found to be unsubstantiated. The remainder were issues that were immediately addressed by the inspector and the farm.

Staff conducted two Certified Livestock Manager trainings. Certification is required for anyone who manages or handles manure at a major concentrated animal feeding facility, or anyone who buys, sells or land applies more than 4,500 dry tons or 25 million gallons of liquid manure a year. Since 2004, a total of 141 people have received this certification. Course work is taught cooperatively with various state and federal partners. Ohio is one of a few states that require this training.

In 2010, program staff continued to develop the final rule revisions necessary to transfer the National Pollutant Discharge Elimination System (NPDES) permitting authority over Ohio's large livestock and poultry farms from Ohio EPA to the department. In consultation with the U.S. Environmental Protection Agency, program staff conducted a thorough review of all relevant federal NPDES statutes and rules, comparing them with Ohio's, and identifying those that needed to be amended in response to recent federal rule changes. The department is waiting a final decision from U.S. EPA on the transfer of the federal NPDES permitting authority.

*Livestock Environmental Permitting Program inspectors check many critical areas on the farm, including liquid manure levels in lagoons, to ensure compliance with Ohio laws and rules.*

*Ohio is home to 176 permitted farms, all of which operated under science-based guidelines to ensure environmental protection and public safety.*

*These operations include dairies, poultry farms, and swine farms. They play a vital role in supporting the local economy, the state's grain farmers and the food processing industry.*

When consumers buy Ohio-grown, raised or processed products, they help support local farmers and economies and the state's multi-billion dollar food and agriculture industry.

The Markets Division provides marketing services to Ohio's food and agricultural sectors to help retain and create jobs and enhance their competitive advantage in Ohio and the United States. The division has two major program areas: domestic marketing and grape industries.

#### Ohio Proud Program

Ohio Proud is the state's domestic marketing program that promotes Ohio food and agricultural products within Ohio's borders and beyond.

The Ohio Proud logo helps consumers identify foods that are made in Ohio and grown in Ohio. Ohio Proud supports the state's goal to provide

safe, local foods to consumers and to create new opportunities for local growers, producers and processors.

The number of Ohio Proud partners reached an all-time high of 463 companies, representing 79 Ohio counties. The new interactive website that promotes an online applications has made it easier for Ohio companies to join the program and has led to a 133 percent increase in membership over the past two years.

The Ohio Food Summit offered Ohio producers the opportunity to spend one-on-one time with specific buyers. Each Ohio producer who attended had pre-scheduled meetings with buyers to introduce their products and hear the buyers' expectations.

Retail buyers representing 20 companies and 42 Ohio producers participated in the program, which

#### The Ohio Grape Industries Program

oversees the expenditure of promotional and research funds for the grape and wine industries, as determined by the Ohio Grape Industries Committee.

In accordance with state law, the director of the Ohio Department of Agriculture serves as chairman of the nine-member committee, whose activities are funded from a portion of the excise tax on the sale of wine in Ohio.

The program serves as the marketing and promotional advocate of Ohio's grape and wine industries. The program also supports grape growers by funding research and extension programs focusing on viticulture (cultivating grapes), entomology, plant pathology, and weed science.

Ohio is home to nearly 150 wineries that produce more than 1.1 million gallons of wine per year. Ohio also has more than 1,500 acres of grapes with Riesling being the most widely grown variety.

In 2010, committee members voted to increase consumer awareness of Ohio's modern, high-quality wine industry through a cost-effective road signage program for Ohio's wineries and vineyards. The Cost Share Road Signage program allowed A2 permit holders in Ohio who met specific criteria set forth by the Ohio Department of Transportation to participate in this program.

The program helped to design and implement uniform road signage for motorists looking to visit Ohio's wineries and vineyards while traveling on state highways and state routes. More than 30 wineries participated in the program.

is expected to result in annual sales of nearly \$500,000.

In 2010, the Ohio Farmers' Market cost share advertising grants were awarded to farmers' markets to help create advertising campaigns. Twenty-two markets were able to participate in advertising opportunities because of this grant.

Markets needed to have matching funds to apply and no more than \$1,500 was awarded to each market.

The committee partnered with 18 restaurants in the Cincinnati, Cleveland, and Columbus areas to better promote the Ohio Quality Wine program and Ohio wines at restaurants. Restaurants selected a minimum of three Ohio wines to feature on their menus from June through November 2010.

The Ohio Grape Industries Committee obtained funding from the U.S. Department of Agriculture's Specialty Crop Block Grant and created the Vineyard Expansion Assistance Program. This program was designed to help both new and existing grape growers in the state to plant high-quality wine grapes and table grapes.

Through a competitive application process, 19 recipients were selected to receive reimbursement for the cost of the grape vines only, up to \$2,000 per acre. This program allows for a more stable

source of high-quality, high-value wine grapes for Ohio's winemakers.

The Division of Meat Inspection helps assure all meat and poultry establishments with a state license are producing safe, wholesome and truthfully labeled products in a sanitary environment.

Division staff members oversee 283 slaughter and processing facilities. Of those, 213 are fully-inspected facilities, which provide products that are eligible for re-sale within Ohio. The remaining establishments operate under a “custom exempt” status and simply provide a “not-for-sale” service to individuals who wish to have their own animals processed.

The state’s inspection approach is centered on an establishment’s performance, incorporating the concepts of Hazard Analysis and Critical Control Point (HACCP) and Sanitation Standard Operating Procedures. The required HACCP procedures make each fully inspected establishment responsible for safeguarding the meat and poultry products they produce. The operating procedures help assure the environment in which the establishment operates is maintained in a sanitary manner.

Additionally, establishments are expected to develop programs for the control of *Listeria monocytogenes* (a pathogen associated with ready-to-eat meats and poultry), programs to control specified risk materials and *E. coli* O157:H7 in beef, and a variety of other prerequisite programs to support their food safety system.

Charter schools, daycare centers and the growth of senior meal feeding programs across the state continue to provide opportunities for caterers and food service operators to modify

their business models in order to provide meals to these consumers. The Division of Meat Inspection staff members provide inspection services to 36 facilities that specialize in meal production and continues to work with other prospective facilities to license and enter this market. On average, these 36 facilities produce 100,000 meals each day.

The sampling program continues to be a vital tool that is used to verify an establishment’s food safety program. Because a state program is required to be at least equal to the federal Food Safety Inspection Service program, the state samples at similar frequencies as the federal program.

In 2010, more than 900 meat samples were analyzed for *E. coli* O157:H7; more than 2,000 samples were analyzed for *Salmonella*; and more than 1,300 samples were analyzed for *Listeria monocytogenes*, all dangerous pathogens that can affect public health. Due to the large percentage of establishments producing ready-to-eat meat and poultry products, including meals to seniors and young children, division staff members have developed a robust, proactive *Listeria* program.

*E. coli* (top) and *Salmonella* (left) are two dangerous pathogens the state’s Division of Meat Inspection sampling program safeguards against.

*Division of Meat Inspection staff members oversee Ohio's 283 slaughter and processing plants that employ more than 2,200 people statewide. The red meat and poultry inspected at these facilities is valued at \$950 million annually.*

Nationally known Ohio companies, including Gerber Poultry, Valley Foods and Donatos Pizza, once got their start under Ohio's state meat inspection program. Demand for these products has grown to the point that these companies are now federally inspected and ship across state lines.

Ohio is one of 27 states to have a state meat inspection program, which is removing barriers for Ohio companies. Ohio's program works with companies to provide specialized instruction and explain the laws to get up-and-coming companies into compliance.

## Inspections

State-Inspected Establishments (fully-inspected) .....	214
Custom Exempt Establishments .....	69
Red Meat at Slaughter .....	75,612,200 lbs.
Poultry at Slaughter .....	500,776 lbs.
Red Meat at Processing .....	176,949,387 lbs.
Poultry at Processing .....	10,296,875 lbs.

The Plant Industry Division is the department's second largest division and is responsible for enforcing many consumer and public protection regulations. Staff duties include testing germination of packaged seeds, verifying label statements on feed and fertilizers, regulating plant nursery stock, monitoring the financial stability of grain elevators, registering pesticides, licensing pesticide applicators, investigating pesticide use complaints, and working with the U.S. Department of Agriculture's Animal Plant Health Inspection Service and the U.S. Forest Service to control invasive pest species. The division's goal is to assure businesses that produce, process and distribute agricultural products provide safe and properly labeled products to consumers.

*Honeybees play an important role in Ohio's agriculture industry.*

#### Apiary Program

Honey bees play a vital role in Ohio agriculture not only through honey production, but are an essential source of pollination for many of the fruit and vegetable crops grown in Ohio, including apples, melons, cucumbers, and pumpkins.

The Apiary Program coordinates state and county inspection services to help ensure a healthy beekeeping industry. Beekeepers are required to register their apiaries annually with the program so the colonies may be easily located and examined for diseases and parasites. In 2010, there were 3,871 beekeepers, which represents 6,000 apiaries or an estimated 32,119 colonies. Apiary program staff work with various national groups and the U.S.

#### Apiary

Registration Certificates Issued .....	3,871

Routine Inspections.....	2,199

Department of Agriculture in providing samples for study of Colony Collapse Disorder, which has caused massive colony deaths in many states, including Ohio.

#### Pesticide and Fertilizer Regulation

The division's Pesticide and Fertilizer Regulation section regulates the use and distribution of pesticides as well as the manufacturing and distribution of fertilizer, lime, and agricultural additives. This section issues licenses to pesticide applicators and serves as the registrar for pesticide and fertilizer companies. Through routine inspections, staff members enforce the state laws

*Inspectors routinely inspect fertilizer tanks and assure the safe use of pesticides.*

and rules that govern these activities. In addition to these responsibilities, staff members conduct inspections for the U.S. EPA in accordance with a cooperative agreement to ensure compliance with the Federal Insecticide, Fungicide and Rodenticide Act.

In 2010, program staff licensed 28,769 pesticide applicators and restricted-use pesticide product dealers and registered 14,363 pesticide products for use in Ohio. Training and testing sessions for certification and re-certification of pesticide applicators were also held throughout the year, helping to assure the safe use of pesticides and preventing misuse and mishandling.

This section also organizes the Clean Sweep Pesticide Disposal Program, holding three regional pesticide collections to assist farmers with a safe and environmentally responsible disposal of unusable, outdated pesticides.

**Grain, Feed and Seed Program**  
The Grain, Feed and Seed Program licenses and regulates commodity handlers in Ohio; helps assure label claims are accurate on all agricultural, vegetable, flower and lawn seeds; and monitors animal feed, including pet food, to make sure claims of protein, fat, vitamins, minerals and antibiotics are accurate.

**Grain, Feed, Seed**

Licensed grain handlers are required to meet certain net worth requirements, verified by financial statements annually submitted to the department. Licensed handlers are required to have insurance coverage equal to full-market value on all grain in their facilities to protect all or part of their losses in case of fire or other disasters. This section also administers the state grain indemnity fund, which reimburses eligible farmers when a licensed elevator becomes insolvent.

*Asian Longhorned Beetle*

Inspectors examine records and check production facilities for verification that feeds are manufactured properly. They help assure precautions are taken to prevent possible cross-contamination and that feeds are correctly labeled to prevent any prohibited material from being fed to ruminants.

Program staff works with the U.S. Food and Drug Administration performing inspections to help prevent the occurrence of bovine spongiform encephalopathy, or “mad cow disease”. The section completed another successful year, finding no violations of these regulations or any serious violations of the U.S. Food and Drug Administration’s medicated feed regulations.

## Plant Pest Control

Ohio’s green industry is one of the highest-value segments of the state’s agricultural sector. The Plant Pest Control program helps protect the state’s plant nurseries and consumers by performing annual inspections to detect pests that pose a threat to plants. This section enforces federal and state quarantines that restrict the movement of articles capable of harboring destructive pests. It provides inspections and phytosanitary certificates for shipments of grain, seed, logs, lumber, greenhouse plants and other agricultural commodities destined for other states and foreign markets.

The Plant Pest Control section also performs exotic pest surveys for destructive insects and disease. Early detection of these pests can increase the likelihood of control and decrease the negative impact to growers or the environment.

In 2010, staff members performed an expanded survey for Asian longhorned beetle in response to the discovery of a live beetle that was captured in a Cincinnati warehouse. The beetle was first found in the U.S. in 1996 in New York. The beetle bores into hardwood trees, and heavy infestations can kill the tree. Initial surveys of the wooded areas near the warehouse by the department and the U. S. Department of Agriculture showed no evidence of infestations. Expanded surveys of high risk locations took place across the state and continue into 2011.

## Plant Pest Control

Federal Phytosanitary Certificates.....	3,279
State Phytosanitary Certificates .....	78

The emerald ash borer is a destructive, invasive pest and a major threat to Ohio's 3.8 billion ash trees. During 2010, the department conducted a survey that placed more than 1,700 purple traps in Ohio. The traps are designed to lure and collect adult beetles and gauge the extent of Ohio's infestation. As a result, some new infestations were found, which included areas of the Wayne National Forest. As a result of these discoveries, the quarantine was expanded to the entire state. Throughout 2010, the department worked with the forest products industry, the U.S. Department of Agriculture and our neighboring states to facilitate the utilization of ash materials while mitigating the risk of spreading emerald ash borer.

The gypsy moth is a non-native, invasive species that was first detected in 1971 in Ashtabula County and has since advanced across Ohio. In its caterpillar stage, it feeds on the leaves of trees and shrubs and is especially fond of oak. The department's Gypsy Moth program is part of an integrated pest management program that involves several states and the U.S. Department of Agriculture. Activities include trapping to

detect and monitor populations and treatments to slow or eradicate populations. In 2010, 14,281 traps were placed and 112,047 acres were treated. To date, 51 counties are under gypsy moth quarantine for moving regulated materials.

## Ohio Plant Diagnostic Network

In 2010, the department established the Ohio Plant Diagnostic Network, which is a cooperative partnership between the department's Plant Industry Diagnostic Laboratory and The Ohio State University's Plant Diagnostic Network. This newly established network brings research and regulation together to more efficiently address Ohio's plant pest, disease and diagnostic needs; eliminates duplicative functions; and increases response efficiency to pest or disease outbreak. Following the National Plant Diagnostic Network model, this lab offers remote teaching and diagnostic nodes across Ohio that will facilitate a more rapid response to diseases and pests.

The plant pathology lab was conceived, designed, and constructed to meet the U.S. Department of Agriculture APHIS-PPQ 526 permit containment specifications. The lab is versatile and will be able to handle viral, bacterial, fungal, oomycete, and nematode pathogens, as well as insect pests under containment conditions. The department received its APHIS-PPQ 526 permit to receive infected plant material from other states.

# Weights and Measures

Mettler Toledo, a leading global supplier of precision instruments, employs more than 600 Ohioans. Mettler Toledo's equipment, which is verified and calibrated at the department's weights and measures lab, was used in the 1996 Olympics.

Ohio's Weights and Measures Lab is the only one in the nation to offer testing on multi-dimensional devices for nation-wide shippers, like Fed Ex and UPS.

The Weights and Measures Division helps to ensure equity in the marketplace by administering and enforcing all laws pertaining to true and uniform weights and measures standards. The division works with county and city weights and measures programs to test devices ranging from fuel meters and retail store scanners to vehicle and livestock scales for consistent measuring standards.

Ohio houses one of only four National Type Evaluation Program Laboratories in the nation that tests and evaluates new scale designs. Ohio's lab is also authorized to test for international standards.

National statistics show that Ohio's lab continues to be the busiest and most productive in the nation.

Ohio's Metrology Laboratory, which houses the state's standards of mass, length and volume, is accredited to the International Standards of Organization 17025. This laboratory is one of only 16 in the nation to receive this designation, which assures necessary traceability for Ohio manufacturers and businesses using these services.

### OHIO 2010 CROP SUMMARY

Favorable weather early in the year allowed Ohio's **Corn** producers to get an early start planting the crop – with the majority being in the ground by April 27, 10 days ahead of the five-year average. This weather encouraged growth and by May 13th, the majority of the crop was emerged, a week earlier than normal. Keeping up with this pace, the 2010 crop matured much faster than average, and farmers began harvesting corn for grain during the first week of September. Ninety-four percent of corn for grain was harvested by November 7th, compared to 35 percent the year before, and three weeks ahead of the five-year average. Corn for grain yielded 163 bushels per acre, the second highest yield on record, falling 11 from the previous year. There were 3.27 million acres harvested in 2010, up from 3.14 in 2009. Total corn production was 533.0 million bushels.

*The price of Ohio's corn rose to \$5.55 per bushel, making 2010 the highest grossing crop on record at \$3.0 billion.*

**Soybean** producers began planting early, yet delays during the second week of May prevented the majority of the crop from being planted until May 24th. The entire crop was planted by the 1st of July which coincides with the five-year average. Soybean development progressed normally through July and August. September brought warm, dry conditions and pushed the crop to drop leaves and mature earlier than normal. Farmers began to harvest in early September as the first soybeans began reaching maturity. Fifty percent of the crop was harvested by October 6th, compared to 14 percent in 2009, and 30 percent for the five-year average. Harvest wrapped up in late October and was complete by November 3rd, almost three weeks ahead of the five-year average. Growers harvested 4.59 million acres of soybeans in 2010, up from 4.53 million acres in 2009. The 2010 crop yielded 48 bushels per acre, one off from the record high set in 2009. Total production topped 220.3 million bushels of soybeans, also the second highest on record.

*Ohio winter wheat producers only harvested 750,000 acres, the second lowest on record.*

**Winter wheat** development progressed on pace with the five-year average. The first fields began to head by the beginning of May, and by the end of the month, 92 percent of the crop was headed. Fields began to turn color by the end of May and the majority were turned by June 11th. Soon after, fields began to turn ripe, and by June 26th, most had reached this stage. Harvest was quick to keep up, and by the time the last fields in the state became ripe, 95 percent of the crop was already harvested. Growers harvested 750,000 acres of winter wheat for grain in 2010, a decrease of 230,000 acres from 2009. The average winter wheat yield was 61 bushels per acre, down 11 bushels from the previous year. Total wheat production was estimated at 45.8 million bushels, a 35.2 percent decrease from the 70.6 million bushels produced in 2009.

*The price of Ohio's soybeans rose to \$11.80 per bushel, making 2010 the highest grossing crop on record at \$2.6 billion.*

The harvest of **alfalfa hay** largely progressed along with the five-year average. The first cutting began the first week of May and was completed by July 6th. The second cutting began the second week of June, and was completed by August 4th. The third cutting was eleven percent complete on July 18th and was completed by September 15th. Producers who were able to harvest a 4th cutting began doing so early in August and were completed by November 2nd. The alfalfa yield was 3.3 tons per acre, a decrease of 0.1 ton from 2009. There were 390,000 acres of alfalfa harvested, up 10,000 acres from the previous year. Production fell only five thousand tons from 1.292 million tons in 2009 to 1.287 million tons in 2010.

*The 2010 Ohio cucumber for pickle harvest had the highest yield in the nation at 10.78 tons per acre, beating Florida by 2.48 tons.*

The first cutting of **other hay** began the second week of May and concluded by July 11th – six days ahead of the five-year average. The second cutting began during the second week of June. Cuttings picked up through the beginning of July, and finished August 27th – 14 days ahead of the five-year average. The third cutting began during the third week of July, and progressed at a faster than normal pace. It was completed by October 12th, three weeks ahead of the five year average. A total of 720,000 acres of other hay were harvested, up 60,000 from 2009. The average yield of other hay was 2.2 tons per acre, which was down 0.2 tons from the 2009 yield. Production of dry hay was 1.58 million tons, the same as in 2009.

Despite a late start, **oats** were 91 percent planted by April 29th, ten days ahead of the five year average. Oat development progressed on a normal pace until July 12th, when oats began to ripen at a fast pace. The crop was completely ripe by July 28th, 12 days ahead of the five-year average. Harvest began the first week of July and was completed by August 9th. Sixty-five thousand acres of oats were planted, and 50,000 acres were harvested for grain. The 2010 harvest yielded an average of 70 bushels per acre, a decrease of 5 bushels per acre from the previous year. Total production was 3.5 million bushels, an increase from 3.375 million bushels in 2009.

*Ohio's strawberries received the highest price in the nation at \$272.00 per hundredweight.*

**Burley tobacco** production totaled 5.1 million pounds, a 1.7 million pound decrease from 2009. There were 2,500 acres of tobacco harvested, down from 3,400 in 2009. The average yield for the harvest was 2,050 pounds per acre, up slightly from the previous year.

**Potato** production totaled 609,000 hundred-weight, down from 704,000 in 2009. Producers planted 2,200 acres, down 100 acres from the previous year. However, harvested acreage stayed the same at 2,100 acres. The yield fell from the all-time high seen last year of 335 hundredweight per acre to 290 cwt in 2010.

**Sweet corn** production totaled 1.2 million hundredweight. This was a decrease of 133,000 cwt from 2009. Producers planted 16,400 acres of sweet corn, a decrease of 100 acres from the previous year. Producers harvested 13,600 acres with an average yield of 90 cwt per acre. The average price of sweet corn was \$24.60 per cwt, down \$5.80 from the 2009 price. The value of production fell to \$30.1 million, down from a record \$41.3 million the previous year.

**Fresh market tomato** production totaled 1.3 million hundredweight, a 267,000 cwt decrease from 2009. Harvested acreage rose 100 acres from the previous year to 4,700 acres. The 2010 harvest yielded 270 cwt per acre, down 64 cwt from 2009. The average price per cwt of \$36.90 was down \$7.10 from the previous year. Total value of production topped \$46.8 million and was down from \$67.6 million in 2009.

*Ohio's bell pepper producers planted and harvested the most acres for their crop on record, at 3,100 and 2,800 acres, respectively.*

**Pumpkin** growers in Ohio harvested 6,900 acres, down 600 acres from 2009. Yield decreased to 160 hundredweight per acre resulting in a total of 1.1 million cwt of total production. The average price of \$15.10 per cwt was down \$3.10 from the previous year. The total value of production was \$16.7 million.

**Apples** were harvested from 6,300 acres of trees, 500 acres less than in 2009. The harvest yielded 13,200 pounds per acre which equals a total production of 83.2 million pounds, down 28 percent from 2009. The average price per pound of apples was 37.4 cents. Value of utilized production totaled \$26.8 million, down 31 percent from 2009.

**Peaches** were harvested from 1,200 acres of trees. The average yield was 5.20 tons per acre, compared to 1.97 tons per acre in 2009. Production increased to 6,240 tons, an increase of 144 percent from 2009. The average price per ton was \$1,580, compared to \$1,640 in 2009. The value of utilized production totaled \$9.45 million, an increase of 139 percent from 2009.

**Grapes** were harvested from 1,900 acres of vines. The harvest yielded 1.83 tons per acre for a total production of 3,470 tons. Of this, 40 tons were utilized for fresh market, 3,010 tons were used for processing, and the remaining 420 tons were not utilized. The average price per ton fell to \$711, a decrease of 26.9 percent from 2009. The total value of utilized production was \$2.2 million, compared to \$5.0 million in 2009.

*Ohio's 2010 cabbage price of \$25.60 per hundredweight was the highest on record. It broke the previous record set in 2006 by \$6.20.*

**Strawberry** growers harvested 730 acres, up 20 acres from 2009. The harvest yielded 48 hundredweight per acre, up 14 percent from the previous year. Likewise, total production rose 17 percent to 35,000 cwt in 2010. The average price per cwt rose 42.4 percent to \$272.00, by far, the highest on record. The value of production totaled \$9.5 million, compared to \$5.7 million in 2009.

## 2010 LIVESTOCK, DAIRY AND POULTRY SUMMARY

**Highlights** of Ohio's livestock statistics for 2010 include: Cattle inventories declined 4 percent to 1.23 million head; dairy cow numbers decreased by 2,000 head; total milk production rose 2 percent from 2009 production; sheep numbers remained unchanged at 103,000 head, but wool production rose 12 percent in 2010. Other 2010 highlights include: hog inventories increased 20,000 head from last year; egg production rose over 1 percent, and layers increased 2 percent over last year's level. Broiler numbers were up 6 percent from 2009, increasing inventories by 3.6 million birds. Turkey numbers, at 4.6 million head, were down 12 percent from 2009, but the value of production rose 4 percent. Ohio beekeepers made a dramatic comeback in 2010 by posting a 92 percent increase in honey production.

**Cattle and calf** inventories, at 1.23 million head, dropped 50,000 head from January 1, 2010 to January 1, 2011. Beef cow inventories were up 1 percent from last year; however, beef cow replacement heifers fell 15 percent from 2010. The number of calves on hand dropped 4 percent from last year. Milk cow replacement heifers moved up 4 percent. Steers and bulls declined 12 and 17 percent, respectively. Cattle on feed numbers fell 13 percent, leveling out at 170,000 head, and the calf crop decreased 4 percent to 450,000 head. Cattle inventory values rose 12 percent from \$850 per head on January 1, 2010 to \$950 per head on January 1, 2011. The total inventory value of cattle and calves increased 7 percent during 2010. On January 1, 2011, Ohio ranked 25th in the nation for cattle inventory.

**Milk cow** numbers decreased from 272,000 head on January 1, 2010 to 270,000 head on January 1, 2011. Total milk production rose 2 percent from 5.19 billion pounds in 2009 to 5.27 billion pounds in 2010. Producers received an average price of \$17.90 per cwt., 28 percent higher than the \$14.20 per cwt. received in 2009. Milk production per cow rose 3.7 percent from the previous years' annual average of 18,744 pounds to 19,446 pounds in 2010. Dairy farmers exceeded last year's production by 1.5 percent, and still managed to generate \$206 million more than last year's revenues. Wayne County continues to lead the state in dairy cow numbers followed by Mercer, Holmes, Tuscarawas and Columbiana counties, respectively.

**Hog inventories** increased from 2.01 million head on December 1, 2009 to 2.03 million head on December 1, 2010. Inventory levels at that time were the highest they had been in 21 years. Hog prices experienced a healthy revival in 2010, ending at \$53.80 per cwt., up 33 percent from the previous year. Mercer, Darke, Auglaize, Putnam and Shelby counties had the highest hog inventories, and combined, represented over 40 percent of Ohio's total inventory in 2010.

### **Cattle:**

*Total cattle inventory was 1.23 million head in 2010, which is less than 1 percent above the all-time record low of 1.22 million head, set in 2003. Ohio cattle ranchers received \$100 more per head in 2010, gaining a 12 percent boost over the previous year's prices. Total value rose 7 percent in 2010, adding \$81 million for the cattle industry. In January 2011, all inventory categories declined, with the exception of beef cows and milk cow replacements.*

### **Milk Cows:**

*Ohio dairy farmers produced 5.27 billion pounds of milk in 2010 - the same amount produced in 1950. Despite equal milk production, only 270,000 cows were needed in 2010, whereas 945,000 cows were necessary in 1950. Average milk prices rose 26 percent, from \$14.20 per cwt. in 2009 to \$17.90 per cwt. in 2010. Total value of production was up 28 percent over the previous year, resulting in a total gain of \$206 million, which equates to \$763 per dairy cow.*

### **Hogs:**

*Ohio hog numbers totaled 2.03 million head, having passed the 2 million mark in June 2009. Inventory levels hadn't been this high since 1989. Even though hog inventories rose marginally, average prices also rose \$13.50 per cwt. during 2010. Gross income for producers went from \$419 million in 2009 to \$586 million in 2010 generating a \$167 million gain, up 40 percent from the previous year.*

**Sheep and Lamb** numbers in Ohio rose less than 1 percent from last year. Inventories edged up only 1,000 head from last year, with 128,000 head in January 2010 and 129,000 head in January 2011. Breeding stock inventories, Ewes, Rams and Replacement lambs all remained constant from the previous year. Despite any significant movements in inventory, prices were anything but constant. Lamb prices leapt 24 percent from \$106.00 per cwt. in 2009 to \$131.00 per cwt. in 2010. Sheep prices rose an unprecedented 49 percent; from \$33.40 per cwt. in 2009 to \$49.70 per cwt. in 2010. **Wool** production in Ohio finally started to comeback in 2010, posting a 12 percent increase. In 2009, wool production was at an all-time record low of 560,000 pounds. There were 100,000 head of sheep shorn in 2010 with an average fleece weight of 6.3 pounds per head. Ohio ranked 13th nationally in sheep numbers, but remained the leader in the United States east of the Mississippi River. The leading counties for total sheep numbers were Knox, Harrison, Wayne, Licking & Muskingum.

**Meat and Other Goat** numbered 59,000 head, up 18 percent from 2009. Milk Goat numbers remained unchanged at 8,000 head, but angora goats, at 1,000 head, dropped slightly from the previous year. Total goat numbers in Ohio increased 15 percent in 2010, from 59,300 the previous year to 68,000 head on January 1, 2011.

**Laying Hen** numbers rose 2 percent in 2010. Ohio began the year with 27.8 million head and finished with 28.3 million head in December 2010. Ohio ranks 2nd in the nation for both laying hens and egg production. Total egg production in 2010 increased over 1 percent from 7.4 billion eggs in 2009 to 7.5 billion eggs in 2010. Ohio supplied over 8.2 percent of the nation's eggs in 2010. Egg value of production increased 5.8 percent from 2009. Turkey numbers in Ohio dropped from 5.2 million birds in 2009 to 4.6 million birds in 2010. Pounds produced were down 13 percent, but the value of production registered a 4 percent increase.

**Bee Colonies** in Ohio soared from 11,000 colonies in 2009 to 17,000 colonies in 2010; a 55 percent increase. Yield per colony increased from 50 pounds per hive in 2009 to 62 pounds per hive in 2010. Due to the dramatic increase in colonies and yield, honey production rose 92 percent. The dramatic increase in supply forced prices down 21 percent from \$2.81 per pound in 2009 to \$2.23 per pound in 2010.

**Manufactured Dairy** products play an important role in Ohio's Dairy industry. Fifty six plants in Ohio manufacture a variety of products that include: Swiss Cheese, American Cheese, Cheddar Cheese, Milk Sherbet, Cottage Cheese, Butter and Ice Cream. In 2010, Ohio continued to rank number 1 in the nation for Swiss Cheese production, 4th in Lowfat Cottage Cheese and Sour Cream, and 5th in Creamed Cottage Cheese and Cottage Cheese Curd.

#### **Sheep & Lambs:**

*Sheep & lamb inventory stayed fairly static while prices took a dramatic change. In contrast, wool prices remained static while production rose. Wool production rose 12 percent in 2010 lifting off its all-time record low of 560,000 pounds set in 2009. Wool prices remained low at \$.28 per pound, only one penny less than producers received in 1940.*

#### **Laying Hens:**

*The value of egg production increased 5.8 percent in Ohio and 5.7 percent in the U.S. The value per bird in Ohio remains unchanged from 2009 to 2010 at \$2.00 per head.*

#### **Bee Colonies:**

*Ohio bee inventories rose dramatically in 2010 and honey production nearly doubled from the previous year. Over the past several years, dwindling numbers, lower production and a phenomenon called the "Colony Collapse Syndrome" has plagued the beekeeping industry. In 2010, however, honey production made a remarkable comeback.*

Total <sup>2</sup>	27,182	27,951	273	270	7,426	7,535

<sup>1/</sup> December preceding year. <sup>2/</sup> For layers columns this is average for the year. For eggs per 100 layers columns this is total egg production divided by average number of layers on hand.

TABLE 48

### Egg Production, Price and Value, Ohio and United States, 2009-2010<sup>1</sup>

Item	Ohio		United States	
	2009	2010	2009	2010
Eggs produced (million eggs)	7,426	7,535	90,484	91,398
Price per dozen (cents)	0.653	<sup>2</sup>	0.817	<sup>2</sup>
Value of production (\$1,000)	403,793	427,071	6,166,038	6,517,823

<sup>1/</sup> Estimates cover the 12 month period Dec. 1, previous year through Nov. 30. <sup>2/</sup> State and National level annual prices discontinued January, 2010.

TABLE 49

### Broiler Production, Price and Value, Ohio and United States, 2009-2010<sup>1</sup>

Item	Ohio		United States <sup>2</sup>	
	2009	2010	2009	2010
Number produced (1,000 head)	56,400	60,000	8,550,200	8,625,200
Pounds produced (1,000 pounds)	338,400	376,800	47,752,300	49,162,100
Value of production (\$1,000)	154,649	181,618	21,822,804	23,696,132

<sup>1/</sup> Broiler production including other domestic meat-type breeds. <sup>2/</sup> Excludes states producing less than 500,000 broilers.

TABLE 50

### Turkey Production, Price and Value, Ohio and United States, 2009-2010

Item	Ohio		United States	
	2009	2010	2009	2010
Number produced (1,000 head) <sup>1</sup>	5,200	4,600	247,359	244,188
Pounds produced (1,000 pounds)	203,320	177,560	7,149,455	7,107,282
Price per pound (dollars) <sup>2</sup>	0.52	<sup>3</sup>	.500	.615
Value of production (\$1,000)	105,726	110,087	3,573,392	4,371,400

<sup>1/</sup> Based on turkeys hatched September 1, previous year, through August 31, current year. Excludes young turkeys lost. <sup>2/</sup> Liveweight equivalent price. <sup>3/</sup> State level price per pound discontinued.

TABLE 51

### Number of Layers by District, Ohio, December 1, 2006-2010

District	Hens and Pullets of Laying Age				
	2006	2007	2008	2009	2010
	Thousand				
10 Northwest	855	1,080	1,245	1,120	1,430
20 North Central	2,110	2,100	2,150	2,230	1,980
30 Northeast	1,130	1,050	1,340	1,320	1,630
40 West Central	17,200	16,755	15,820	16,680	17,080
50 Central	5,650	5,085	5,960	6,050	5,740
60 East Central	215	195	235	240	190
Southern Region <sup>1</sup>	315	313	313	198	222
State	27,475	26,578	27,063	27,838	28,272

<sup>1/</sup> Includes Districts 70 Southwest, 80 South Central and 90 Southeast.

TABLE 52

### Bee Colonies and Honey Production, Ohio, 2006-2010<sup>1</sup>

Year	Honey Producing Colonies	Yield Per Colony	Production	Stocks Dec 15 <sup>2</sup>	Average Price Per Pound <sup>3</sup>	Value of Production
	Thousand	Pounds	Thousand Pounds	Thousand Pounds	Cents	Thousand Dollars
2006	14	56	784	282	140	1,098
2007	14	61	854	376	177	1,512
2008	14	53	742	371	168	1,247
2009	11	50	550	132	281	1,546
2010	17	62	1,054	327	223	2,350

<sup>1/</sup> For producers with 5 or more colonies. <sup>2/</sup> Stocks held by producers. <sup>3/</sup> Prices weighted by sales.

## Farm Income Statement of Ohio: 2007-2009

### U.S.: 2008-2009

Gross Farm Income	Ohio			United States	
	2007	2008	2009	2008	2009
Thousand Dollars					
<b>Plus: Net government transactions</b>	(4,933)	(6,856)	(7,238)	923,502	1,203,668
+ Direct Government payments	268,733	275,223	288,445	12,241,697	12,262,587
- Motor vehicle registration and licensing fees	14,470	12,515	15,751	604,251	645,378
- Property taxes	259,196	269,564	279,932	10,713,944	10,413,541
<b>Gross value added</b>	3,484,795	4,006,941	4,327,608	165,276,469	142,142,418
<b>Less: Capital consumption</b>	1,011,300	1,079,742	1,133,460	28,689,535	30,116,259
<b>Net value added <sup>1</sup></b>	2,473,495	2,927,199	3,194,148	136,586,934	112,026,158
<b>Less: Payments to stakeholders</b>	1,058,242	1,044,105	1,072,318	49,989,371	49,839,092
Employee compensation (total hired labor)	513,329	462,675	458,363	24,979,930	24,850,656
Net rent received by nonoperator landlords	163,849	196,141	234,632	9,589,811	9,834,140
Real estate and nonreal estate interest	381,064	385,289	379,323	15,419,630	15,154,296
<b>Net farm income <sup>1</sup></b>	1,415,253	1,883,094	2,121,830	86,597,563	62,187,066

<sup>1/</sup> Value of agricultural sector production is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development. <sup>2/</sup> A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

TABLE 62

## Farm Assets, Debts and Ratios, U.S. 2006-2009

Assets, Debts and Equity	United States			
	2006 <sup>1</sup>	2007 <sup>1</sup>	2008 <sup>1</sup>	2009
Million Dollars				
Farm assets	1,923,596	2,055,276	2,015,707	2,043,500
Real estate	1,625,835	1,751,386	1,702,961	1,727,173
Livestock and poultry	80,747	80,649	80,607	79,785
Machinery and motor vehicles <sup>2</sup>	114,200	114,706	115,785	112,332
Crops <sup>3</sup>	22,699	22,703	27,610	32,887
Purchased inputs	6,460	7,019	7,167	7,217
Financial	73,656	78,812	81,577	84,106
Farm debt <sup>4</sup>	203,581	214,063	242,677	245,360
Real estate	108,048	112,682	133,582	134,514
Farm Credit System	43,448	46,793	57,124	58,423
Farm Service Agency	2,374	2,281	2,313	2,343
Commercial banks	40,149	41,884	49,705	50,338
Life insurance companies	12,001	12,750	14,736	14,246
Individuals and others	9,790	8,657	9,552	8,695
CCC storage & drying loans	285	316	151	469
Nonreal estate	95,533	101,382	109,096	110,846
Farm Credit System	27,811	31,622	37,290	39,883
Farm Service Agency	2,736	2,808	2,652	2,823
Commercial banks	51,253	54,129	57,313	57,027
Individuals and others	13,733	12,823	11,841	11,113
Equity	1,720,015	1,841,212	1,773,029	1,798,140
Ratio:				
Debt/equity	11.8	11.6	13.7	13.5
Debt/assets	10.6	10.4	12.0	12.0

<sup>1/</sup> Revised <sup>2/</sup> Includes only farm share value for trucks and autos. <sup>3/</sup> Non-CCC crops held on farms plus value above loan rates for crops held under CCC. <sup>4/</sup> Includes CCC storage and drying facilities loans but excludes debt on operator dwellings and for nonfarm purposes.

### 2007 Census of Agriculture Farm Structure

Structure	Percent
Sole Proprietor	81.8
Partnership	8.6
Family Corporation	8.0
Non Family Corporation	0.4
Other Structure	1.1

## COUNTY SUMMARIES

Number of Farms = 250  
Average Farm Size = 144 Acres  
Total Land in Farms = 36,000 Acres  
Non-irrigated cropland rent per acre = \$54.50  
Commercial Grain Storage Capacity (bu.) = -

## 2009 Cash Receipts from Marketing of Farm Commodities

Corn	\$445,000	Dairy & Milk	\$282,000
Soybeans	\$276,000	Cattle & Calves	\$789,000
Wheat	\$14,000	Hogs & Pigs	\$62,000
Oats & Hay	\$262,000	Poultry & Other Livestock	\$297,000
Other Crops	\$1,577,000	Total	\$4,004,000
Average Cash Receipts per farm	\$16,015		

## 2007 Census of Agriculture Farm Structure

<b>Structure</b>	<b>Percent</b>
Sole Proprietor	88.4
Partnership	8.0
Family Corporation	2.8
Non Family Corporation	0.8
Other Structure	0.0

2010 Crops	Acres Harvested	Yield	Production	Rank
Corn for Grain, Bu.	22,000	163.1	3,588,000	49
Soybeans, Bu.	38,000	46.4	1,765,000	48
Wheat, Bu.	2,400	67.1	161,000	46
Alfalfa Hay, Ton	1,750	3.20	5,600	62
Other Hay, Ton	7,600	1.95	14,800	40

Livestock	Number	Rank
All Cattle & Calves (1/01/11)	3,600	76
Milk Cows (1/01/11)	100	80
All Hogs & Pigs (12/01/09)	1,000	63
All Sheep (1/01/11)	800	58

Number of Farms = 870  
Average Farm Size = 101 Acres  
Total Land in Farms = 88,000 Acres  
Non-irrigated cropland rent per acre = -  
Commercial Grain Storage Capacity (bu.) = 597,000

## 2009 Cash Receipts from Marketing of Farm Commodities

Corn	\$9,904,000	Dairy & Milk	\$395,000
Soybeans	\$15,751,000	Cattle & Calves	\$1,170,000
Wheat	\$1,283,000	Hogs & Pigs	\$310,000
Oats & Hay	\$691,000	Poultry & Other Livestock	\$1,232,000
Other Crops	\$7,645,000	Total	\$38,381,000
Average Cash Receipts per farm	\$44,116		

## 2007 Census of Agriculture Farm Structure

Structure	Percent
Sole Proprietor	86.3
Partnership	7.9
Family Corporation	4.4
Non Family Corporation	0.6
Other Structure	0.9
