

Ohio Crop Weather

Timely Rains

Timely rains helped some corn and soybean fields last week, according to Cheryl Turner, State Statistician, USDA NASS, Ohio Field Office. There were 5.0 days suitable for fieldwork during the week ending August 25.

The perimeter of the State received much of the rainfall while counties across the middle of the State received fewer showers. Overall, the State received slightly higher than normal amounts of rainfall. Temperatures and base 50 growing degree days were slightly higher than normal levels as well. Topsoil moisture rated adequate and surplus saw a 2 percentage point increase from the previous week while subsoil moisture rated adequate and surplus saw a 3 point decrease.

Corn, soybeans, oats, and hay all continued to lag behind the 5-year average progress in all categories listed. Rainfall was a blessing as 52 percent of corn was in dough stage and 70 percent of soybeans were setting pods. Even with the timely rains, corn rated in good to excellent condition was 31 percentage points below the 5-year average rating and soybeans rated in good to excellent condition was 29 points below the 5-year average rating. Oat harvest and the second cutting of alfalfa were very close to completion.

Soil Moisture: Week Ending 08/25/19

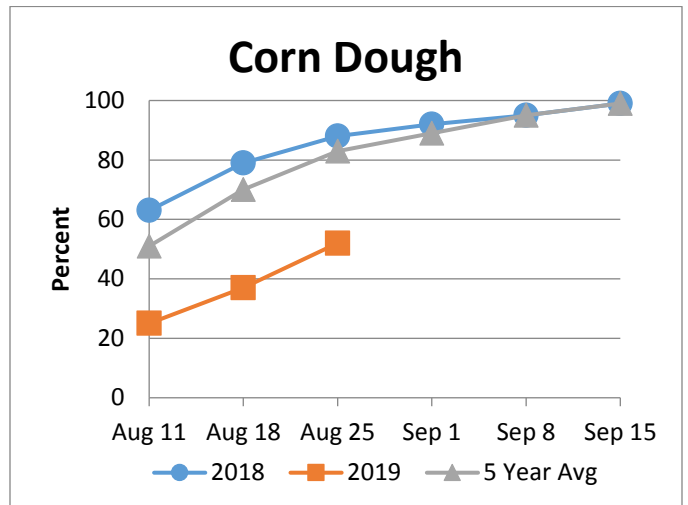

Item	Very short	Short	Adequate	Surplus
	<i>(percent)</i>	<i>(percent)</i>	<i>(percent)</i>	<i>(percent)</i>
