## Planting Winds Down during Heat and Storms

While temperatures and humidity levels soared, farmers all but completed the last of their intended plantings, according to Cheryl Turner, State Statistician, USDA NASS, Ohio Field Office. Topsoil moisture conditions were rated 1 percent very short, 6 percent short, 72 percent adequate, and 21 percent surplus. Statewide, the average temperature for the week ending June 19 was 75.0 degrees, 4.7 degrees above normal. Weather stations recorded an average of 1.11 inches of precipitation, 0.14 inches above average. There were 3.8 days suitable for fieldwork during the week ending on June 19.

Strong storms early in the week harmed some crops, with reports of corn, wheat, alfalfa, and hay being flattened by roaring winds. Farmers reported limited replanting necessitated by excess rainfall, high winds, and subsequent soil crusting. Livestock demonstrated fatigue stemming from the heat and humidity. **Corn** was 97 percent planted, and 88 percent of corn had emerged. **Soybean** planting progress was 90 percent complete, while 74 percent were emerged. **Oats** emerged was 99 percent and 52 percent were headed. Crop condition for oats was reported as 70 percent good to excellent. **Winter wheat** was 97 percent headed and 5 percent mature. The winter wheat crop was rated 55 percent good to excellent condition. First cuttings of **alfalfa and other dry hay** were 80 percent and 58 percent completed, respectively. Second cuttings of hay alfalfa were 7 percent complete and second cuttings of hay other than alfalfa were 5 percent complete. **Pasture and range** condition was reported as 82 percent good to excellent.

### Soil Moisture: Week Ending 06/19/22

Item	Very short	Short	Adequate	Surplus
