The estimates of planted and harvested acreages in this report are based primarily on a probability list frame survey conducted during the first 2 weeks of June. This survey was based on a sample of approximately 6,500 farm operators. Data were collected by mail, internet, and telephone interview to obtain information on these operations.

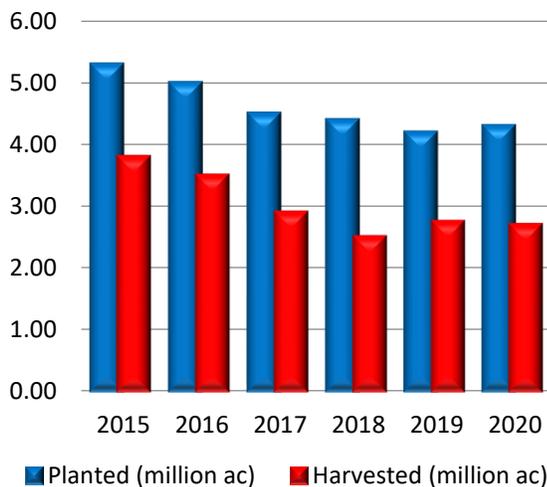

Data provided by Oklahoma and Texas operators are the foundation of the estimates made for the Southern Plains region. The Southern Plains Regional Field Office would like to thank all farmers and ranchers that responded to these surveys and provided data used to set these important estimates.
