The June winter wheat yield and production forecast is based on two surveys conducted by the Southern Plains Regional Field Office: a farm operator survey and an objective yield survey. The farm operator survey was conducted primarily by telephone with some use of mail and internet. The objective yield survey collects actual stalk counts and head weights from plots set up in producer fields across the states of Oklahoma and Texas.

Data provided by Oklahoma and Texas operators are the foundation of the estimates for the Southern Plains region. We would like to thank all farmers who responded to the Ag Yield survey and to those winter wheat producers who permitted objective measurements to be taken in their fields.
