## USDA to Conduct Survey about Hired On-Farm Labor

**HARRISBURG, PA** – The U.S. Department of Agriculture’s National Agricultural Statistics Service (NASS) will conduct its biannual Agricultural Labor Survey during the second half of April. The survey will collect information about hired labor from approximately 4,000 farmers and ranchers across the 11-State Northeastern Region.

“Labor data are critical to farming operations and data about the use of hired workers helps administer farm labor programs,” explained Kevin Pautler, Deputy Director of the National Agricultural Statistics Service, Northeastern Regional Field Office. “The data that farm operators provide through NASS’s Agricultural Labor Survey help leaders, associations, and farmers themselves make decisions based on accurate information.”

USDA and the U.S. Department of Labor will use statistics gathered in the Agricultural Labor Survey to establish minimum wage rates for agricultural workers, administer farm labor recruitment and placement service programs, and assist legislators in determining labor policies.

In the survey, NASS asks participants to answer a variety of questions about hired farm labor on their operations, including total number of hired farm workers, hours worked, and wages paid for the weeks of January 12-18 and April 12-18. For their convenience, survey participants have the option to respond online.

“By asking about two separate reference periods each time we collect data during the year, we are able to publish quarterly data and capture seasonal variation,” said Pautler. “This approach reduces the number of times we ask farm operations to respond to surveys while ensuring that accurate and timely data are available for anyone conducting research or analyses.”

NASS will compile, analyze, and publish survey results in the May 28 *Farm Labor* report. All previous *Farm Labor* publications are available online at:
