1990 REVISED
1991 PRELIMINARY

Dr. Milton B. Wise
Vice President/Vice Provost

Henry J. Power, Jr.
State Statistician

We are pleased to present the 1992 edition of **South Carolina Agricultural Statistics**. This publication contains agricultural statistics for crops, livestock and poultry, for 1990 and 1991.

This bulletin is a cooperative effort between the National Agricultural Statistics Service of the United States Department of Agriculture, and the Department of Agricultural and Applied Economics, the South Carolina Agricultural Experiment Station, and the Cooperative Extension Service of Clemson University. This cooperative relationship increases efficiency by avoiding duplication of effort and conflicting reports. The Federal program serves to provide comparable statistics for all states, which are released in national reports, while State funds make it possible to prepare and publish detailed statistics for South Carolina.

We are indebted to the thousands of South Carolina farmers who voluntarily give their time and effort to report information relating to their operation. Without this voluntary cooperation, it would be impossible to make reliable estimates or compile this publication. Thanks to all of you who assist in this effort. We also thank our staffs for their dedication in preparing this bulletin.

SOUTH CAROLINA CROP SUMMARY

1991

JANUARY: The month of January 1991 began under a shield of clouds and drizzle. Daily average temperatures during January were 1 to 3 degrees above normal. One significant cold air outbreak occurred on the 22nd and 23rd when minimum temperature dipped to 10 degrees at Tigerville. Daily temperatures during this outbreak averaged 10 to 15 degrees below normal. A winter storm developed on the 24th and snow accumulations ranged from 6 inches in the Mountains, and foothills to 3 inches in the Piedmont and Midlands. Based on the period from 1895 to 1991, monthly total precipitation in January ranked eighty-seventh (eleventh wettest). By mid-January, many locations statewide had exceeded the normal monthly total precipitation.

Frequent showers and little or no drying the first half of the month kept outdoor activities to a minimum. The wet field conditions slowed field work; however, land preparation for spring planting and planting tobacco seed beds continued as weather permitted.

FEBRUARY: Early in the month an area of high pressure was centered along the coast of the Carolinas providing ample sunshine and warm temperatures. On the 7th and 8th a low pressure area, centered over western Tennessee, moved eastward bringing showers and thunderstorms to the State. A severe thunderstorm spawned a tornado which hit parts of Pickens County east of Liberty, S.C. on the 14th. Localized snow showers occurred across the State with the cold air. This cold air outbreak was the coldest of the 1990-91 winter thus far as low temperatures fell into the teens and single digits from the Coast to the Upstate. Mountain locations reported temperature readings below zero on the 16th.

Precipitation during February ranged from 4.8 inches at Calhoun Falls to 0.13 inch at Hilton Head. Many locations along the southern coast of South Carolina received record low rainfall for the month. Daily average temperatures during the month were 1 to 4 degrees above normal.

Wet conditions continued to slow fieldwork. Tobacco plant beds were in generally good condition. Fruit growers were actively pruning peach trees. Most growers were unable to apply nitrogen to small grains due to soggy fields.

MARCH: The month of March was characterized by the occurrence of severe storms which dumped heavy rains and spawned three tornadoes, and by warm, dry weather which resulted in rampant wildfires. Fires destroyed nearly 14,000 acres across the State in March. Daily average temperatures varied from 2 to 4 degrees above normal across the Palmetto State in March. March was the 71st warmest month of record since 1895. Precipitation during March ranged from 11.13 inches at Caesars Head to 2.69 inches at Irmo.

Small grains looked very good. Tobacco plant beds were in good condition. Corn planting continued but was slowed due to rainfall. Pastures and livestock were in good condition.

APRIL: The month of April was marked by a higher than usual occurrence of severe weather across the Palmetto State. Precipitation varied widely during April as isolated showers and thunderstorms developed ahead of fronts which passed through the State. Preliminary precipitation totals indicates that extremes for the month ranged from 10.32 inches at Yemassee in Jasper County to 0.98 inch at Myrtle Beach.

April showers were frequent and heavy at times; however, most farmers were able to get their planting activities done between showers. Planting of all crops was slightly behind last year's fast pace but generally ahead of the 5-year average. Condition of crops was generally fair to good. Small grain crops were progressing on schedule; however, the above normal rainfall resulted in above normal disease and insect problems.

South Carolina's peach crop was in good condition. Pastures were reported in fair to mostly good condition.

MAY: The month of May was characterized by ample rainfall and seasonal temperatures. Almost daily thunderstorms brought hail, high winds and flooding across the State. A cold snap was experienced in late May with daytime temperatures only reaching the low 70's; however, the monthly average temperature was 3 to 4 degrees above normal.

The planting of corn and tobacco was delayed by the continuous showers, but was completed by the second week of May. Both crops were in fair to good condition. Peanut planting neared completion with 94 percent planted by month's end. Cotton, sorghum and soybean planting lagged well behind normal while sweetpotatoes were right on schedule. The harvesting of peaches continued at a slower than average pace in late May; however, the crop maintained its good condition rating. Frequent showers continued to cause delays in watermelon and cantaloup planting. Although disease was reportedly showing up in many fields, both crops were reported in fair to good condition.

Small grains matured ahead of the average rate and although the overall condition of the small grains remained fair to good, diseases were an increasing problem. The pastures were rated fair to good.

JUNE: Warm and occasionally violent weather prevailed across much of the Palmetto State during June. End of the month showers brought very little relief to the State's dryer acres. Soil moisture over the entire month was short to adequate.

Soybean planting continued to linger behind the previous year's pace with the crop in fair to good condition. Cotton and corn were reported in fair to good condition. Tobacco development was well ahead of the normal rate and was reported in fair to good condition. Harvesting of cantaloups and watermelons progressed well ahead of the average pace. Watermelons remained in fair to good condition while cantaloups dropped to fair condition. Peach harvesting continued to lag behind the previous year's pace. Snap beans remained in fair to good condition, as planting neared completion. Tomato harvesting continued at an active pace and the condition of the crop was fair to good. Small grain harvest was virtually complete in June.

JULY: The warm and wet weather continued throughout July. Showers and thunderstorms, some severe, were frequent during the latter half of the month. Average daily temperatures during July ranged from 1 degree above normal in the Upstate to 3 degrees above normal in the Coastal Plains. The increased precipitation resulted in higher than usual humidity, which when combined with temperature, elevated the heat index into the 105 to 110 degree range.

The condition of the soybean, corn, cotton, sweetpotato, and tobacco crops improved during the month as showers were fairly numerous at most locations. Harvesting of this year's cantaloup and watermelon crops continued ahead of the normal pace while cantaloups improved to fair to good condition and watermelons dropped to fair condition. The peach and snap bean crops maintained their statewide condition rating of fair to good. The hay crop was reported in fair to good condition as harvesting was well ahead of the 1990 pace.

AUGUST: The month of August was typical of mid-Summer complete with heat and humidity. The abundant rainfall which fell was a product of a series of frontal passages during the first half of the month and isolated intense thunderstorms during the last half of the month.

Corn harvest was behind 1990's fast pace but was slightly ahead of the 5-year average. Soybean development was progressing on schedule with the crop rated in good condition. Excessive rains continued to effect the cotton crop in a negative way as condition of the crop was rated fair to good. Tobacco harvest was active during the month with almost 90 percent of the crop in the barn. Peanuts continued to be rated in fair to good condition. Peaches and cantaloups remained in fair to good condition, while watermelons continued in fair condition. Apple harvest was in full swing, and the crop had a good condition rating. Hay crops and pastures were in good condition throughout the month.

SEPTEMBER: The month of September was characterized by prolonged periods of warmer and drier than normal weather across the Palmetto State. The frequency of rainfall diminished significantly during the month as several locations reported only one day of measurable rainfall.

September had ideal weather for harvesting corn and by month's end 91 percent of the State's acreage was reported harvested. Soybeans did not fair quite as well as more rainfall would have been beneficial during the maturity stage. Cotton condition improved. Sorghum and peanut conditions improved during the month while pasture conditions declined. Tobacco harvest was virtually complete by mid-month and marketing was very active during the month. Apple and sweetpotato harvest continued at an active pace. Pecan condition declined to fair. Dry September weather slowed down land preparation and planting of small grains.

OCTOBER: Weather for the month of October was unusually warm and dry. Rainfall averaged less than an inch at many locations around the State. Temperatures were a little cooler than normal early in the month but warmed up to much above normal toward the end of October.

Soybean harvesting continued to gain momentum and was 24 percent complete by the end of the month. Favorable weather conditions allowed cotton harvesting to continue in full swing. Peanut, sweetpotato, and sorghum harvest was reported well ahead of normal throughout the month.

Apple harvest was completed by the end of the month. Pecans, snap beans and cucumbers were reported in fair condition. Planting of small grains and winter grazing was slowed due to extremely dry conditions. Pastures were in mostly fair condition.

NOVEMBER: The month of November 1991 was cooler and drier than usual. Precipitation was generally less than average and temperatures averaged 2 to 4 degrees below normal despite a notable mid-month warm period.

Soybean conditions improved as harvesting continued well ahead of normal. Cotton harvest continued at an active pace. Sorghum and sweetpotatoes maintained their fair to good condition rating. Small grains remained in fair to good condition while pastures were rated fair.

DECEMBER: The month of December 1991 began warmer and drier than usual and ended cooler and wetter than usual. The average daily temperature was 3 to 6 degrees above normal. Total precipitation ranged from less than 1 inch across portions of the Coastal Plains to more than 5 inches in the Mountains.

Cotton harvest was complete by mid-month while soybean harvest was virtually complete by month's end. Sweetpotatoes remained in fair to good condition, while sorghum dropped to fair condition. Tobacco seed bed preparation was underway during the month. Small grain planting continued across the State and was virtually complete by the end of December.

SOUTH CAROLINA: Acreage, Yield, Production and Value of Crops, 1990 and 1991

1991 VEGETABLE ACREAGE DOWN

South Carolina's harvested acres of all vegetable and small fruit commodities produced in 1991 was 41,810 acres, down 5 percent from the 44,070 acres harvested in 1990. Of the five leading commodities harvested, sweetpotatoes, watermelons and cucumbers for pickles acreage declined 17, 15 and 1 percent, respectively. Fresh market snap beans acreage showed an increase of 11 percent, while tomato acreage was unchanged from 1990. Acreages harvested for other commodities were mixed, with decreases ranging from 1 to 33 percent. Increases ranged from 5 to as much as 70 percent.

South Carolina's value of production for all vegetable and small fruit commodities was \$91.5 million in 1991. The five leading commodities in value of production were tomatoes, watermelons, cucumbers for pickles, sweetpotatoes and collards.

ACREAGE, YIELD, PRODUCTION, PRICE AND VALUE OF COMMODITIES, 1991

Commodity	Acreage		Yield Per Harvested Acre	Production	Average Price	Value of Production
	Planted	Harvested

1991 SOUTH CAROLINA FRUIT TREE SURVEY

South Carolina's commercial orchards and vineyards totaled 35,544 acres as of December 1, 1991. This was 4 percent below the acreage reported in 1988. Peach acreage decreased 3 percent, apples 8 percent and grapes 34 percent. Peach acreage was by far the largest, accounting for 89 percent of the total fruit acreage. Peach acreage registered a 9 percent decline in the Upper State while the Ridge and Coastal Plains were both down 1 percent from 1988.

South Carolina is the largest peach producing state in the South and is second in the Nation in total peach production.

Although South Carolina's apple acreage was down 8 percent from 1988, the total number of trees registered a 6 percent increase. In Oconee County, the county with the largest apple acreage in the State, tree numbers were up 39 percent from 1988 as growers continue to switch from standard trees to the dwarf and semi-dwarf rootstocks. Acreage and number of trees were down from 1988 in all of the other major apple counties in the State. South Carolina accounts for less than one percent of the Nation's apple production; however, the state is recognized for early, fine quality fruit.

Grape acreage continued the sharp downward trend that began in the mid-seventies with all varieties of grapes showing declines. Most vineyards were older and there has been little incentive to replace vines when they became unproductive.

**Peaches: Number of Commercial Growers and Trees,
South Carolina, Selected Years, 1950-1991**

Year	Number of Growers	Trees of all Ages
1950	1,410	4,375,000
1958	1,305	4,927,000
1964	899	3,888,393
1965	885	3,730,913
1968	471	2,538,230
1972	367	2,277,507
1975	346	2,640,397
1978	299	3,140,185
1982	341	4,002,713
1985	272	4,007,659
1988	242	3,192,978
1991	218	3,185,159

**Apples: Number of Commercial Growers and Trees,
South Carolina, Selected Years, 1966-1991**

Year	Number of Growers	Trees of all Ages
1966	82	177,433
1968	105	213,092
1972	122	264,160
1975	113	288,024
1978	114	323,951
1982	124	380,161
1985	105	651,831
1988	95	648,895
1991	82	688,868

SOUTH CAROLINA FARM NUMBERS

The number of farms in South Carolina as of June 1, 1991 is estimated at 24,000, down 1,000 from the June 1, 1990 number of 25,000. Total land in farms for 1991 is 5.1 million acres, down 2 percent from the 5.2 million acres in 1990. The average size of farm in 1991 is 213 acres up 5 acres from 1990.

The number of farms in the United States in 1991 is estimated at 2.105 million, down 2 percent from the 2.140 million in 1990. Total land in farms for 1991 is 983 million acres, down fractionally from 1990. The number of farms has continued to decline at a faster rate than land in farms with the average size of farms increasing from 461 in 1990 to 467 in 1991.

1/ Per program modification: on-farm corn, wheat and sorghum grain stock estimates discontinued. Off-farm barley and oats will be made as of June 1 each year; sorghum stock estimates each June 1 and Sept. 1. Beginning Sept. 1, 1988 off-farm barley stock estimates were restored for Sept. 1, Dec. 1, and Mar. 1. Oat and sorghum grain stocks estimates restored beginning Mar. 1, 1990. * Not published to avoid disclosing individual operations.

LIVESTOCK REVIEW

FARMS in South Carolina were estimated at 24,000 for 1991, many of which included livestock as part of the farm operation. The total **LIVESTOCK and POULTRY INVENTORY VALUE** for 1991 was \$358,397,000 compared with \$354,773,000 in 1990 and \$342,602,000 in 1989.

There were 600,000 **CATTLE and CALVES** on South Carolina farms January 1, 1992, up 3 percent from January 1, 1991 and 2 percent above January 1, 1990. Included in this inventory were 18,000 cattle and calves on feed, unchanged from a year ago. The beef cow inventory at this same time totaled 287,000 head, up 4 percent from last year. The milk cow inventory at 33,000 was down 1,000 head from January 1, 1991. The inventory value for all cattle and calves January 1, 1992 was \$318,000,000 up 3 percent from 1991. The average value was \$530.00 per head, unchanged from 1991 but \$30.00 more than 1990.

HOGS and PIGS on South Carolina farms December 1, 1991 totaled 405,000 head, 1 percent less than the 410,000 in 1990 and 6 percent less than the 430,000 in 1989. The inventory value was \$29,565,000 in 1991, down 16 percent from 1990's \$35,260,000. The value per head was \$73.00 in 1991, \$86.00 in 1990, and \$80.50 in 1989. South Carolina ranked 21st in the Nation in hog numbers with North Carolina 6th, Georgia 13th, and Florida 29th.

CHICKENS in commercial and farm flocks in South Carolina as of December 1, 1991 totaled 6,770,000 birds excluding broilers down 5 percent from the previous December 1. The inventory value was \$10,832,000 in 1991, down 11 percent from 1990 and 17 percent below 1989. **BROILER PRODUCTION** grossed \$116,475,000 in 1991, up 8 percent from 1990's \$107,969,000, and 7 percent more than 1989's \$109,205,000. There were 394,830,000 pounds produced receiving an average of 29.5 cents per pound liveweight equivalent.

^{1/} These specie belts show the geographic concentration of each specie within South Carolina. Each belt consist of the top five counties.

1/ Prior to January 1, 1970, definition was milk cows and beef cows 2 years old and over. 2/ Estimates discontinued 1-1-79. 3/ Annual number raised rather than inventory. 4/ Annual average number of layers, (December previous year through November current year).

CATTLE

The South Carolina cattle industry had 15,000 CATTLE FARMS in 1991 with 287,000 BEEF COWS while a decade ago 20,000 cattle farms had 309,000 beef cows.

The 1991 CALF CROP totaled 245,000 head, no change from 1990 but 8 percent below 1989's 265,000 calves. The CALVING RATE for these years measures the steady efficiency of South Carolina cattlemen with 77 percent for 1991 and 79 percent for 1990. These rates are conservative because some cows died or were slaughtered before calving and the January 1 inventory does not include young heifers which had their first calf after that date.

CATTLE and CALVES ON FEED in South Carolina are animals being fed a ration of grain, silage, hay and/or protein supplement for slaughter market that are expected to produce a carcass that will grade select or better. It excludes cattle being "backgrounded only" for later sale as feeders or later placement in another feedlot. There were 18,000 cattle and calves on feed in South Carolina January 1, 1992, unchanged from a year earlier.

MILK PRODUCTION

South Carolina dairymen have an admirable record of efficiency in milk production. In 1981 there were an estimated 2,400 farms with one or more dairy cows in South Carolina with an average of 48,000 MILK COWS during the year producing 552 million POUNDS OF MILK, 31.5 POUNDS PER COW per day. During the past ten years dairymen have improved this rate to 33.6 pounds per cow per day in 1991. This rate of milk produced per cow per day is computed by dividing all milk produced (excluding milk sucked by calves) by the average number of milk cows (including milk cows used only for subsistence and milk cows that are dry). There were an estimated 800 farms with one or more dairy cows in South Carolina during 1991 with an average of 33,000 milk cows which produced 405 million pounds of milk.

The 1991 MILK PRODUCTION was 9 percent less than 1990 and 12 percent below 1989. The 1991 annual average MILK PER COW at 12,273 pounds compares with 12,771 pounds in 1990 and 12,486 pounds in 1989. FARM VALUE of milk produced, which includes value of fluid milk and cream consumed in farm households, milk used for farm-churned butter, milk fed to calves, as well as marketings of milk and cream totaled \$56,324,000 in 1991 compared with \$73,650,000 in 1990, and \$73,044,000 in 1989. The AVERAGE PRICE of milk in 1991 was \$13.91 per cwt. compared with \$16.47 in 1990, and \$15.81 in 1989.

HOGS

South Carolina had 7,500 HOG FARMS in 1991. The leading hog counties in terms of numbers and in order of importance were Orangeburg, Horry, Sumter, Dillon, and Hampton. Hog farms have decreased over the last 10 years from 19,000 in 1981. The leading counties in order for 1981 were Orangeburg, Horry, Sumter, Williamsburg, and Hampton.

The 1991 PIG CROP of 670,000 was slightly below 1990. There were 334,000 pigs saved in the spring of 1991 from 46,000 sows (7.3 per litter). The fall period showed 336,000 pigs saved from 45,000 sows (7.5 pigs per litter).

MARKETING, which includes custom slaughter for use on farms where produced and outshipments, but excludes inter-farm sales within the State, during 1991 totaled 687,000 head in South Carolina. These marketings decreased 4 percent from the 1990 marketings of 715,000 head and were 9 percent less than the 1989 marketings of 753,000 head.

1/ Balance sheet estimates. The sum of inventory for the current year plus pig crops (Dec.-Nov.) and inshipments for the following year equals the sum of marketings, farm slaughter, deaths, and inventory for the following year. 2/ December previous year. 3/ Pigs per litter equal pigs saved divided by sows farrowed. 4/ Excludes inshipments direct to Federal Inspected slaughter plants. 5/ Includes custom slaughter for use on farms where produced and State outshipments, but excludes inter-farm sales within the State. 6/ Excludes custom slaughter for farmers at commercial establishments.

EGG PRODUCTION

South Carolina **EGG PRODUCTION** in 1991 totaled 1,420 million eggs from an average 5,458,000 layers. This compares to 1990's production of 1,422 million eggs, slightly above 1991, and 1,342 million eggs in 1989 which was 5 percent less than in 1991.

The **NUMBER OF LAYERS** on hand during 1991 were 5,458,000, up slightly from the 5,441,000 on hand in 1990 and 7 percent above 1989's 5,114,000 layers. The annual average **RATE OF LAY** per layer (including breeders) was 260 eggs in 1991 or 71.2 percent. This compares with 261 or 71.8 percent in 1990. The **VALUE OF EGGS PRODUCED**, which includes hatching eggs and eggs consumed on farms, was \$77,982,000, 6 percent less than the 1990 value of \$82,950,000 but 4 percent more than the \$75,264,000 for 1989.

South Carolina **RANKED** 15th in the nation for egg production in 1991 with California 1st, Georgia 5th, North Carolina 8th, and Florida 10th. Within the State, Newberry County ranked 1st followed by Kershaw, then Greenwood, Oconee, and Saluda counties.

BROILER PRODUCTION

South Carolina broiler producers produced a record high of 96,300,000 broilers in 1991. This is 15 percent more than 1990 and 25 percent more than 1989. **POUNDS PRODUCED** totaled 394,830,000 in 1991, up 15 percent from 1990. The **AVERAGE PRICE** received for broilers in 1991 was 29.5 cents per pound liveweight equivalent, down 2.0 cents from 1990. **VALUE OF PRODUCTION**, which includes home consumption, was \$116,475,000, up 8 percent from 1990's \$107,969,000.

Lexington, Aiken, and Saluda are the leading broiler-producing counties in the State. South Carolina ranks 16th in the Nation with Arkansas holding the top and Alabama placing 2nd, Georgia 3rd, and North Carolina 4th.

RECORD HIGH BROILER AND TURKEY PRODUCTION

South Carolina broiler and turkey production was at new record highs for 1991 with 96,300,000 and 6,000,000 birds produced, respectively. Broiler production increased 15 percent from 1990 while turkey production increased 3 percent. Together, 13,200,000 more broilers and turkeys were produced in 1991 for an increase in the value of production of \$10,695,000.

Total Broilers and Turkeys Raised in South Carolina

TURKEYS RAISED

TURKEYS RAISED in South Carolina during 1991 totaled a record high 6,000,000 birds, 9 percent above the 5,550,000 birds raised in 1990.

VALUE OF PRODUCTION was \$65,934,000 during 1991, 3 percent more than 1990. During 1991 the average price received was 37.0 cents per pound, 1.0 cent less than 1990 and 1.4 cents less than what producers received on a nation-wide basis during 1991.
