AE 476
1991 REVISED
1992 PRELIMINARY

FOREWORD

We are pleased to present the 1993 edition of **South Carolina Agricultural Statistics**. This publication contains agricultural statistics for crops, livestock and poultry, for 1991 and 1992.

This bulletin is a cooperative effort between the National Agricultural Statistics Service of the United States Department of Agriculture, and the Department of Agricultural and Applied Economics, the South Carolina Agricultural Experiment Station, and the Cooperative Extension Service of Clemson University. This cooperative relationship increases efficiency by avoiding duplication of effort and conflicting reports. The Federal program serves to provide comparable statistics for all states, which are released in national reports, while State funds make it possible to prepare and publish detailed statistics for South Carolina.

We are indebted to the thousands of South Carolina farmers who voluntarily give their time and effort to report information relating to their operation. Without this voluntary cooperation, it would be impossible to make reliable estimates or compile this publication. Thanks to all of you who assist in this effort. Also, thanks to my staff for their dedication in preparing this bulletin.

Sincerely,

A handwritten signature in cursive script that reads "Henry J. Power, Jr." The signature is written in dark ink and is positioned to the right of the word "Sincerely,".

Henry J. Power, Jr.
State Statistician

SOUTH CAROLINA CROP SUMMARY

1992

JANUARY: Average temperatures during the first part of the month were several degrees above normal but neared normal toward the end of the month. Precipitation for the month was about normal.

Land preparation for spring planting and the planting of tobacco seed beds continued as weather permitted; small grain fertilizing was active.

FEBRUARY: Temperatures during the month averaged well above normal, ranging from 1 to 3 degrees above normal early in the month to 6 to 11 degrees above normal the end of the month. Rainfall varied across the State with monthly totals slightly below to near normal.

Tobacco plant beds were in good condition. Small grains were in good condition; nitrogen application was active and herbicide applications were made as needed. Fruit growers were actively pruning trees.

MARCH: During the first week of March, average temperatures were 11 to 13 degrees above normal but averaged 1 to 3 degrees below normal for the remainder of the month. Rainfall was slightly below normal for the month. Soil moisture ratings at the end of the month were 5 percent short, 93 percent adequate and 2 percent surplus.

Some light and spotty frost damage occurred on peaches during the second week of the month. Vegetable, melon and corn planting was active during the month and tobacco transplanting was just getting underway at month's end. Small grains looked very good. Pastures and livestock were in good condition.

APRIL: April began cool and dry but temperatures began warming at mid-month until unusually cold temperatures set record low temperatures at some sites the last few days of the month. Frost was reported in some areas. Rainfall during the last half of the month was above normal and provided relief to the dry soil conditions. Soil moisture ratings at the end of the month were 9 percent short, 86 percent adequate and 5 percent surplus.

Planting of nearly all crops was ahead of normal with cotton and sweetpotatoes being the exceptions, slightly behind the 5-year average. Condition of crops was generally fair to good.

The small grain crops were developing slightly behind normal with some disease and insect problems reported; however, the overall condition was good. Peaches were in fair condition with spotty cold weather damage ranging from light to severe depending on variety and location. Pastures were in fair to good condition.

MAY: The month began very cool, with record low temperatures in many areas at the end of the first week. Temperatures warmed to near normal during mid-month but cooled again toward the end of May. Precipitation for the month was about one-half of

normal. Soil moisture ratings at the end of the month were 61 percent short and 39 percent adequate.

The planting of cotton and peanuts made good progress during the month and was nearly complete at month's end; planting of most other crops was slightly behind normal. Small grain harvest was just getting underway at the end of the month after being delayed by the cool weather. Peach harvest was also slow in starting as many of the early ripening varieties were damaged by the early spring freezes. The pastures were rated fair to good.

JUNE: June was cool and wetter than May, as scattered showers brought needed rain to the State, improving soil moisture conditions. Temperatures were generally below normal. Soil moisture ratings at the end of the month were 50 percent short, 48 percent adequate and 2 percent surplus.

Crop planting, development and harvesting was generally behind normal due to the cool weather. Cotton condition was fair to good but squaring of the crop lagged well behind normal. Tobacco topping was slightly ahead of normal with the crop in fair to good condition. Soybean planting continued to linger behind the previous year's pace with the crop in fair to good condition. Sorghum and sweetpotato planting was also behind normal. Peach harvesting continued behind normal with the crop in fair to good condition. Melon harvest picked up during the month, but was still well behind the previous year. Tomato and snap bean harvest remained behind normal; crop condition was fair to good. The small grain harvest was also well behind normal due to the cool, rainy weather.

JULY: July weather was just the opposite of June - hot and dry. However, scattered showers at the end of the month brought some needed relief. Temperatures during the month averaged normal to mostly above normal. Any precipitation received was in the form of scattered thunderstorms. Soil moisture ratings at the end of the month were 21 percent very short, 68 percent short and 11 percent adequate.

At the beginning of July, cotton was setting bolls well behind normal; however, the crop progressed rapidly during the month and was near normal at the end of the month. Tobacco harvesting was ahead of normal with the crop in fair to good condition. Corn made good progress but was still maturing behind normal. Final sorghum planting was about complete

while early harvest was getting underway. Late soybean planting wrapped up slowly with the crop in fair to good condition. Peach harvest continued behind normal through July. Watermelon and cantaloupe harvest was ahead of normal by the end of the month, with both crops in fair condition. Tomato and cucumber harvest neared completion. Small grain harvest was finished about mid month. Pastures were in fair to good condition.

AUGUST: The unusual weather continued in August. Temperatures started the month above normal and ended the month below normal. Rainfall was well below normal the first week and above normal the remainder of the month. Soil moisture ratings at the end of the month were 9 percent short, 87 percent adequate and 4 percent surplus.

Crop harvesting was active during the month despite the sporadic rainy conditions. Tobacco harvest was still ahead of normal at month's end while corn harvest was slightly behind normal. Corn was in fair to good condition. Soybean development was ahead of normal with the crop in fair to good condition. Cotton development continued behind normal with open bolls on only 12 percent of the acreage compared to 20 percent normally. Peach harvest was

nearly complete by month's end and apple harvest was well underway. Watermelon harvest was nearly complete by mid-month while cantaloupe harvest continued to the end of the month. Pastures were in fair to good condition.

SEPTEMBER: Temperatures during September were near normal and scattered showers during the month were beneficial but overall precipitation was slightly below normal. Soil moisture ratings at the end of the month were 38 percent short, 60 percent adequate and 2 percent surplus.

Cotton made good progress during the month with development aided by the normal temperatures; however harvest was still behind normal when September ended. Tobacco harvest was completed during the month. Corn harvest made excellent progress during the month and was ahead of normal as October approached. Soybean development was about normal but slightly behind the previous year as 27 percent of the acreage had leaves turning compared to 34 percent in 1991. Sweetpotato harvest was slightly behind normal while sorghum harvest was ahead of normal. Apple harvest lost ground during the month and was 13 percent behind normal as the month ended. Pastures were in good condition.

OCTOBER: October was generally cool and dry although warmer temperatures and scattered showers during the last few days of the month tempered the pattern somewhat. Soil moisture ratings at the end of the month were 62 percent short and 33 percent adequate.

Corn harvest was virtually complete by the end of the month, but cotton fell further behind normal with only 36 percent harvested at the end of the month compared to the normal 68 percent at the end of October. Soybeans were slowly maturing and harvest was underway but behind the normal pace. Sorghum and sweetpotato harvest continued active. Apple harvest, while still behind normal, was nearing completion as the month ended. The pecan crop was in poor to fair condition. Small grain planting made good progress during the month and was ahead of normal. Pastures were in fair to good condition.

NOVEMBER: November was wet in most areas. Temperatures were about normal. Soil moisture ratings at the end of the month were 5 percent short, 68 percent adequate and 27 percent surplus.

Despite the rain, cotton harvesting picked up a little during the month and by December 1 was only 15 percent behind normal. The crop was in fair condition. Soybean harvest was slowed during the month and was 19 percent behind normal but in fair condition. Small grain planting continued active and, except for wheat, was well ahead of normal. Pastures were in fair to good condition.

DECEMBER: The first half of the month was cooler than normal but temperatures returned to normal at mid-month. The end of the month was highlighted by cold, wintery weather, especially in the Upstate.

Cotton and soybean harvest continued through the month as weather permitted, but was still not complete when the month ended. Small grain planting was completed during the month and the condition of the crops was fair to good. Tobacco seed bed preparation got underway during the month.

SOUTH CAROLINA FARM NUMBERS

The number of farms in **South Carolina** as of June 1, 1992 is estimated at 24,500, unchanged from the revised 1991 number of 24,500. Total land in farms for 1992 is 5.2 million acres, the same as the 1991 land in farms estimate. The average size of farm in 1992 is 212 acres, unchanged from 1991.

The number of farms in the **United States** in 1992 is estimated at 2.1 million, down slightly from 1991. Total land in farms for 1992 is 980 million acres, down 2.7 million acres from last year. Average size of farms increased from 467 acres last year to 468 acres in 1992.

1/ Per program modification: on-farm corn, wheat and sorghum grain stock estimates discontinued. Off-farm barley and oats will be made as of June 1 each year; sorghum stock estimates each June 1 and Sept. 1. Beginning Sept. 1, 1988 off-farm barley stock estimates were restored for Sept. 1, Dec. 1, and Mar. 1. Oat and sorghum grain stocks estimates restored beginning Mar. 1, 1990. * Not published to avoid disclosing individual operations.

LIVESTOCK REVIEW

FARMS in South Carolina were estimated at 24,500 for 1992, many of which included livestock as part of the farm operation. The total **LIVESTOCK and POULTRY INVENTORY VALUE** for 1992 was \$388,544,000 compared with \$358,397,000 in 1991 and \$354,773,000 in 1990.

There were 630,000 **CATTLE and CALVES** on South Carolina farms January 1, 1993, up 5 percent from January 1, 1992 and 9 percent above January 1, 1991. Included in this inventory were 14,000 cattle and calves on feed, down 22 percent from a year ago. The beef cow inventory at this same time totaled 311,000 head, up 8 percent from last year. The milk cow inventory at 29,000 was down 4,000 head from January 1, 1992. The inventory value for all cattle and calves January 1, 1993 was \$349,650,000 up 10 percent from 1992. The average value was \$555.00 per head, up \$25.00 from 1992 and 1991.

HOGS and PIGS on South Carolina farms December 1, 1992 totaled 385,000 head, 5 percent less than the 405,000 in 1991 and 6 percent less than the 410,000 in 1990. The inventory value was \$26,950,000 in 1992, down 9 percent from 1991's \$29,565,000. The value per head was \$70.00 in 1992, \$73.00 in 1991, and \$86.00 in 1990. South Carolina ranked 21st in the Nation in hog numbers with North Carolina 6th, Georgia 13th, and Florida 29th.

CHICKENS in commercial and farm flocks in South Carolina as of December 1, 1992 totaled 5,977,000 birds excluding broilers down 12 percent from the previous December 1. The inventory value was \$11,954,000 in 1992, up 10 percent from 1991 but 1 percent below 1990. **BROILER PRODUCTION** grossed \$136,317,000 in 1992, up 17 percent from 1991's \$116,475,000, and 26 percent more than 1990's \$107,969,000. There were 446,940,000 pounds produced receiving an average of 30.5 cents per pound liveweight equivalent.

^{1/} These specie belts show the geographic concentration of each specie within South Carolina. Each belt consist of the top five counties.

1/ Prior to January 1, 1970, definition was milk cows and beef cows 2 years old and over. 2/ Estimates discontinued 1-1-79. 3/ Annual number raised rather than inventory. 4/ Annual average number of layers, (December previous year through November current year).

CATTLE

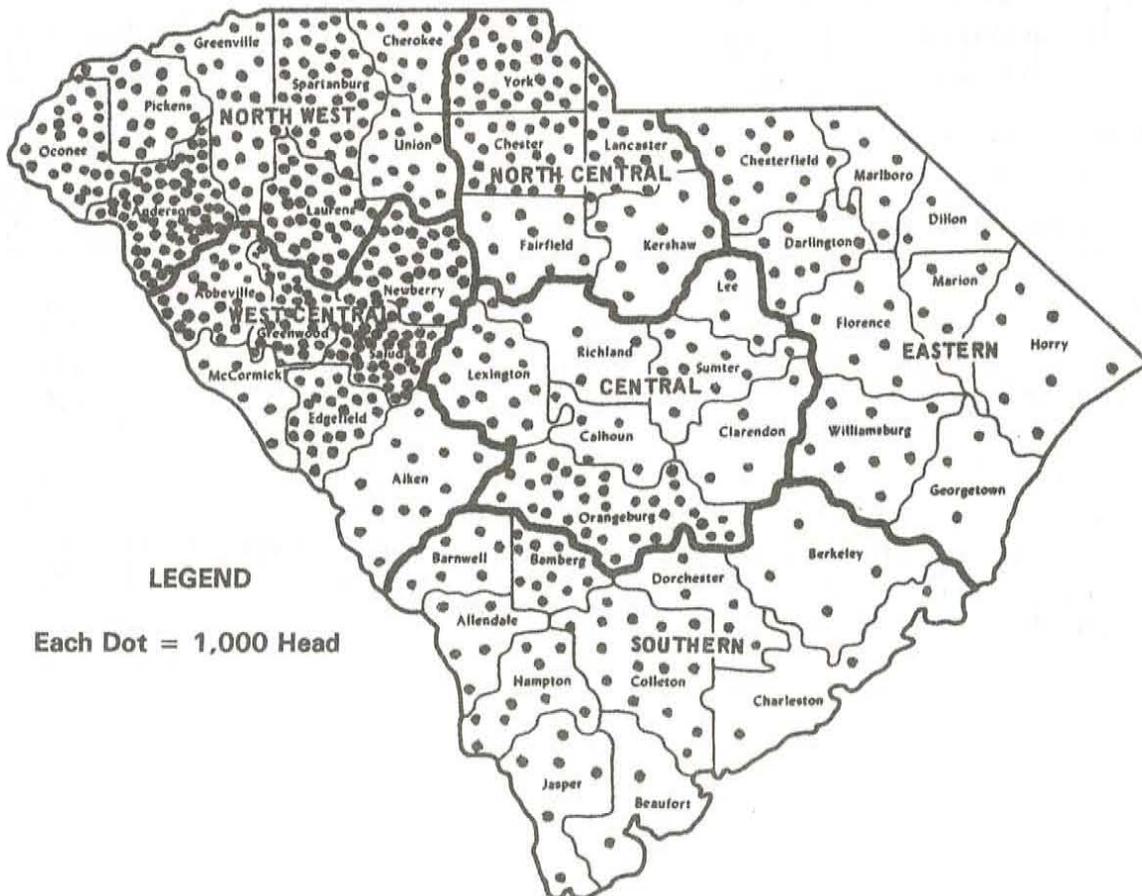

The South Carolina cattle industry had 15,000 **CATTLE FARMS** in 1992, unchanged from a year earlier, but the cattle inventory of 630,000 head was 30,000 head above 1991.

The 1992 **CALF CROP** totaled 260,000 head, up 6 percent from the 245,000 calves born in both 1991 and 1990. The **CALVING RATE** for these years measures the steady efficiency of South Carolina cattlemen with 79 percent for 1992 and 78 percent for 1991.

CATTLE and CALVES ON FEED in South Carolina are animals being fed a ration of grain, silage, hay and/or protein supplement for slaughter market that are expected to produce a carcass that will grade select or better. It excludes cattle being "backgrounded only" for later sale as feeders or later placement in another feedlot. There were 14,000 cattle and calves on feed in South Carolina January 1, 1993, down 22 percent from a year earlier.

1976	34,000	1981	23,000	1986	20,000	1991	18,000
1977	30,000	1982	20,000	1987	20,000	1992	18,000
1978	31,000	1983	20,000	1988	20,000	1993	14,000

^{1/} Cattle and calves on feed are animals being fed a ration of grain, silage, hay and/or protein supplement for slaughter market that are expected to produce a carcass that will grade select or better. It excludes cattle being "backgrounded only" for later sale as feeders or later placement in another feedlot. Cattle and calves on feed are included in the cattle and calf inventory estimates by classes.

MILK PRODUCTION

There were an estimated 500 farms with one or more dairy cows in South Carolina during 1992 with an average of 30,000 **MILK COWS** which produced 394 million **POUNDS OF MILK**. The average pounds per day per milk cow was 36.0 pounds in 1992.

The 1992 **MILK PRODUCTION** was 3 percent less than 1991 and 12 percent below 1990. The 1992 annual average **MILK PER COW** at 13,133 pounds compares with 12,273 pounds in 1991 and 12,771 pounds in 1990. **FARM VALUE** of milk produced, which includes value of fluid milk and cream consumed in farm households, milk used for farm-churned butter, milk fed to calves, as well as marketings of milk and cream totaled \$59,457,000 in 1992 compared with \$56,324,000 in 1991, and \$73,650,000 in 1990. The **AVERAGE PRICE** of milk in 1992 was \$15.09 per cwt. compared with \$13.91 in 1991, and \$16.48 in 1990.

HOGS AND PIGS

South Carolina had 4,500 **HOG FARMS** in 1992. The leading hog counties in terms of numbers and in order of importance were Orangeburg, Horry, Sumter, Clarendon, Dillon, and Hampton. Hog farms have decreased over the last 10 years from 15,000 in 1982. The leading counties in order for 1982 were Orangeburg, Horry, Sumter, Williamsburg, and Hampton.

The 1992 **PIG CROP** of 624,000 was 7 percent below 1991. There were 321,000 pigs saved in the spring of 1992 from 44,000 sows (7.3 per litter). The fall period showed 303,000 pigs saved from 41,000 sows (7.4 pigs per litter).

MARKETING, which includes custom slaughter for use on farms where produced and outshipments, but excludes inter-farm sales within the State, during 1992 totaled 642,000 head in South Carolina. These marketings decreased 5 percent from the 1991 marketings of 678,000 head and were 10 percent less than the 1990 marketings of 715,000 head.

EGG PRODUCTION

South Carolina **EGG PRODUCTION** in 1992 totaled 1.45 billion eggs from an average 5,581,000 layers. This compares to the 1.42 billion eggs produced in both 1991 and 1990.

The **NUMBER OF LAYERS** on hand during 1992 were 5,581,000, up 2 percent from the 5,458,000 on hand in 1991 and 3 percent more than 1990's 5,441,000 layers. The annual average **RATE OF LAY** per layer (including breeders) was 259 eggs in 1992 and 260 in 1991. The **VALUE OF EGGS PRODUCED**, which includes hatching eggs and eggs consumed on farms, was \$69,094,000, 11 percent less than the 1991 value of \$77,982,000.

South Carolina **RANKED** 15th in the nation for egg production in 1992 with California 1st, Georgia 5th, North Carolina 8th, and Florida 12th. Within the State, Newberry County ranked 1st followed by Kershaw, Oconee, Saluda, and Darlington counties.

1/ Average number on hand during month. 2/ December of previous year. 3/ Average number during year. 4/ Annual rate of lay per layers on hand (eggs produced during year divided by average number of layers during year).

BROILER PRODUCTION

South Carolina broiler producers produced a record high of 114,600,000 broilers in 1992. This is 19 percent more than 1991 and 37 percent more than 1990. **POUNDS PRODUCED** totaled 446,940,000 in 1992, up 13 percent from 1991. The **AVERAGE PRICE** received for broilers in 1992 was 30.5 cents per pound liveweight equivalent, up 1.0 cent from 1991. **VALUE OF PRODUCTION**, which includes home consumption, was \$136,317,000, up 17 percent from 1991's \$116,475,000.

Lexington, Aiken, and Saluda are the leading broiler-producing counties in the State. South Carolina ranks 15th in the Nation with Arkansas holding the top and Alabama placing 2nd, Georgia 3rd, and North Carolina 4th.

COMMERCIAL BROILERS: Production and Value of Production, SOUTH CAROLINA, 1988 - 1992 ^{1/}

Year	Number Produced	Avg. Liveweight per Broiler	Pounds Produced	Price per Pound ^{2/}	Value of Production ^{3/}
	Thou. Head	Pounds	Thou. Lbs.	Cents	Thou. Dollars
1988	70,832	4.0	283,328	31.5	89,248
1989	76,905	4.0	307,620	35.5	109,205
1990	83,600	4.1	342,760	31.5	107,969
1991	96,300	4.1	394,830	29.5	116,475
1992	114,600	3.9	446,940	30.5	136,317

^{1/} Twelve month period beginning with December of previous year. ^{2/} Liveweight equivalent price. ^{3/} Gross income received for the production of broilers. Includes home consumption which is less than 1 percent of total production.
