AE 479
1992 REVISED
1993 PRELIMINARY

FOREWORD

We are pleased to present the 1994 edition of **South Carolina Agricultural Statistics**. This publication contains agricultural statistics for crops, livestock and poultry, for 1992 and 1993.

This bulletin is a cooperative effort between the National Agricultural Statistics Service of the United States Department of Agriculture, and the Department of Agricultural and Applied Economics, the South Carolina Agricultural Experiment Station, the Cooperative Extension Service of Clemson University, and the South Carolina Department of Agriculture. This cooperative relationship increases efficiency by avoiding duplication of effort and conflicting reports. The Federal program serves to provide comparable statistics for all states, which are released in national reports, while State funds make it possible to prepare and publish detailed statistics for South Carolina.

We are indebted to the thousands of South Carolina farmers who voluntarily give their time and effort to report information relating to their operation. Without this voluntary cooperation, it would be impossible to make reliable estimates or compile this publication. Thanks to all of you who assist in this effort. Also, thanks to my staff for their dedication in preparing this bulletin.

Sincerely,

Robert A. Graham

Robert A. Graham
State Statistician

**SOUTH CAROLINA
CROP, LIVESTOCK AND POULTRY STATISTICS
1992 - 1994**

SOUTH CAROLINA CROP SUMMARY

1993

JANUARY: Daily average temperatures during the first part of the month ranged from slightly above normal to 10 degrees above normal. Precipitation for the month ranged from 1.30 to 3.40 inches.

Frequent showers kept outdoor activities to a minimum. Land preparation for small grains and tobacco bed preparation was delayed as continuous showers caused fields to be too wet.

FEBRUARY: Temperatures during the month averaged from 2 to 4 degrees above normal. February was a drier month than January, with rainfall averaging from 0.10 to 1.50 inches across the State.

Wet conditions began to take its toll on crop conditions. Small grain development and tobacco fieldwork continued to be delayed. Some producers reported that they were reseeding tobacco beds due to water damage. Cotton and soybeans producers were able to make some progress in late harvest.

MARCH: Daily average temperatures ranged from near normal to 15 degrees below normal. Throughout the month, the State received various levels of rainfall, ranging from 0.30 to 2.50 inches. By the end of the month, soil moisture levels were 36 percent adequate and 64 percent surplus.

Land preparation for corn increased. Producers indicated that the condition of the wheat crop had improved while some tobacco beds were still being damaged by the rain and cold weather. By the middle of the month the cold weather began to cause damage to early planted wheat, early variety peaches, and some tobacco plants. As the month ended land preparation, planting and crop development continued to be delayed by cool, wet weather conditions.

APRIL: The month began cool and wet, but by mid-month warmer, drier conditions had moved into the State and continued throughout the rest of the month. Daily average temperatures ranged from 5 degrees below normal to 3 degrees above normal. Statewide rainfall averaged from less than 0.10 to 1.70 inches. Soil moisture ratings at the end of the month were 27 percent short and 73 percent adequate.

As the month began, planting of nearly all crops was behind the normal pace with spring snap bean planting being the exception, ahead of the 5-year average. Although the wet weather ended and producers were able to make progress in land preparation and planting, by the end of the month, planting of most crops was still slightly behind the 5-year average.

The development of the small grain crops was behind schedule due to late fall plantings and the cool wet weather this spring. Some cold damage and disease problems were reported ; however, the overall condition of the crops was fair to good. The peach crop remained in fair to good condition throughout the month.

MAY: Temperatures during the month ranged from 3 degrees below normal to 3 degrees above normal. Statewide rainfall averaged from 0.10 to 0.80 inches. Soil moisture ratings at the end of the month were 12 percent very short, 66 percent short and 22 percent adequate.

Planting of cantaloupes, cotton, cucumbers, peanuts, and watermelons made substantial progress during the month and was nearly complete at the end of the month. Small grain development began to pick up, but was still behind the normal pace as no harvesting activities were reported by month's end. The condition of the crops was fair to good. Peach harvest was in its early stages and the overall condition was fair to good.

JUNE: June was hotter and drier than May and although some areas received isolated showers, the average rainfall for the month ranged from less than 0.05 to 0.70 inches. Temperatures were generally near normal, except during the middle week of the month, when they soared to 10 - 15 degrees above normal. Soil moisture ratings at the end of the month were 39 percent very short, 59 percent short, and 2 percent adequate.

Cotton squaring was slightly ahead of the normal pace and the condition of the crop was mostly fair. Tobacco was in fair condition as topping progressed at an above average rate. Soybean planting was ahead of the 5-year average; however, the condition of the crop had worsened to mostly fair. The corn and sorghum crops were severely damaged by the hot, dry weather and their overall condition was poor and fair, respectively. Peach harvest continued at a slightly slower than normal pace, as the condition of the crop fell to fair. Melon harvest picked up during the month and progressed slightly ahead of the average rate. Small grain harvest was in full swing, as the condition of the crops dropped to poor.

JULY: July weather was very similar to June - hot and dry. Daily temperatures ranged from 4 to 7 degrees above normal with a few scattered showers. Average rainfall during the month ranged from 0.40 to 1.30 inches. Soil moisture ratings were 51 percent very short, 45 percent short, and 4 percent adequate by the end of the month.

At the beginning of July, cotton was setting bolls slightly behind normal and the condition of the crop was poor. Tobacco harvesting was well behind normal with the crop in poor to fair condition. Corn was maturing well ahead of the normal pace; however, the hot, dry weather caused the Statewide condition to be very poor to poor. Final sorghum planting neared completion as harvest proceeded slightly ahead of normal; the condition of the crop was poor. Late soybean planting wrapped up around mid month; the condition of the crop was mainly poor. Peach harvest continued behind normal; the overall condition of the crop poor to fair. The Statewide condition of the melon crops was poor to fair, as harvest continued at a slower than normal pace. Tomato harvest was complete by mid-month. Small grain harvest was finished by about mid-month with the crops in fair condition. Fall hay and pastures were both rated in poor condition.

AUGUST: The drought continued in August. Temperatures for the month ranged from 2 degrees below to 7 degrees above normal. Scattered showers throughout the month gave farmers hope that the worst of the drought was over. Rainfall averaged from 0.30 to 1.30 inches. Soil moisture ratings at the end of the month were 50 percent very short, 41 percent short and 9 percent adequate.

Tobacco harvest was well behind schedule at month's end, while corn harvest was slightly ahead of normal. The condition of the crops was fair and very poor to poor, respectively. The development of the soybean crop continued to suffer from the hot, dry weather and the overall condition of the crop was poor to fair. Cotton development progressed ahead of normal, although the condition of the crop was poor. Peach and apple harvest lagged behind the 5-year average. By the end of the month, the condition of the crops was fair and poor to fair,

respectively. Cantaloupes and watermelons were in poor to fair condition, as harvest neared completion. Fall hay and pasture condition was rated poor to fair, as scattered showers brought some relief.

SEPTEMBER: Temperatures during September ranged from near normal to 7 degrees above normal. Precipitation averaged from 0.50 to 0.90 inches. Soil moisture ratings at the end of the month were 17 percent very short, 51 percent short and 32 percent adequate.

Cotton development was well ahead of normal throughout the month. Tobacco harvest was well behind last year's pace; the crop maintained its condition rating of fair during the month. Corn harvest progressed at a slightly above average pace with the condition of the crop rated as poor at the end of the month. Soybean development was slightly behind the previous year. The sweetpotato crop was in poor to fair condition, as harvesting lagged behind the normal pace. The overall condition of the apple crop was fair as harvesting was well behind the average pace. The statewide condition of pastures remained very poor to poor.

OCTOBER: October was generally a cooler month with temperatures ranging from 7 degrees below normal to 5 degrees above normal. Rainfall varied throughout the month, from 0.20 to 2.40 inches. Soil moisture ratings were 12 percent very short, 43 percent short, and 45 percent adequate.

Corn harvest was complete by the mid-month. Cotton harvest remained well ahead of the normal pace throughout the month. The condition of the crop was mostly poor to fair by month's end. Soybeans were maturing at a slightly slower than normal pace and harvest was underway but behind the normal pace. Sorghum and sweetpotato harvest continued to progress at an active pace. Apple harvest was slightly behind normal, but nearing completion as the month ended. The pecan crop was in fair condition at the beginning of the month but fell to poor to fair by month's end. Small grain planting made good progress during the month and all except wheat were well ahead of schedule as the month ended. Pastures were very poor to poor condition statewide.

NOVEMBER: Daily average temperatures ranged from 9 degrees below normal to 11 degrees above normal. Precipitation ranged from 0.10 to 1.40 inches. Soil moisture ratings at the end of the month were 43 percent short, and 57 percent adequate.

By the end of the month, cotton harvest neared completion, well ahead of the previous year's pace. The condition of the crop was mostly fair. Favorable weather conditions throughout the month allowed soybean harvest to progress slightly ahead of last year's pace. The statewide condition of the crop was poor to fair. By the end of the month, the overall condition of small grains improved to fair to good; however planting and emergence was slowed by a cold temperatures. Pastures were in poor to fair condition.

DECEMBER: The month began with temperatures ranging from near normal to 2 degrees below normal and ended with temperatures ranging from 5 - 7 degrees below normal. Precipitation for the month averaged less than one inch.

Cotton and soybean harvest neared completion by the middle of the month. Land preparation and planting of small grains made excellent progress, as moisture levels remained adequate. Overall small grains looked good as growth began to slow down due to cold weather.

**CROPS: Acreage, Yield, Production and Value,

1/ Production in bales. 2/ Production estimates started in 1965. NOTE: In some cases the acreage or yield or production is identical for more than one year. In such cases the year shown is the latest year of occurrence.

1993 Vegetable Survey

South Carolina's harvested acreage of all vegetable and small fruit commodities produced in 1993 was 33,575 acres, down 20 percent from the 41,810 acres for harvest that was estimated in a similar survey in 1991. All five commodities listed in the federal estimation program also showed a decline in acres for harvest from the previous year. Fresh market snapbeans showed the largest decrease in acreage of the five commodities, 48 percent below the 1992 level. Watermelon acreage held the next largest decline in acres for harvest, 30 percent below the previous year. Fresh market cucumber acreage slipped down 25 percent from last year to an estimated 1,500 acres harvested. Tomato and sweetpotato acreage had the lowest level of decline for the five federal crops, at 3,200 and 1,800 acres (16 percent and 10 percent) respectively.

Similar relationships were common to vegetables for processing. Acreages harvested for all other commodities were mixed, with decreases ranging from 0 to 56 percent and increases ranging from 4 to as much as 250 percent.

The five counties with the largest total vegetable acreage harvested in 1993 included: Florence, Clarendon, Charleston, Lexington, and Barnwell. The five fresh market commodities with the largest acreage harvested in 1993 were: watermelons, tomatoes, sweetpotatoes, cucumbers and snap beans.

South Carolina's value of production for all vegetable and small fruit commodities was \$73.1 million in 1993. The five leading commodities in value of production were tomatoes, watermelons, fresh market cucumbers, green onions, sweetpotatoes, and collards. The five counties ranking highest in the value of production included: Charleston, Beaufort, Florence, Lexington, and Clarendon.

Data for commodities published under all other vegetables could not be published separately due to very small acreages and/or possible disclosure problems.

Acreage, Yield, Production, Price and Value of Commodities, 1993

Commodity	Acreage		Yield Per Harvested Acre	Production	Average Price	Value of Production
	Planted	Harvested				
	-Acres-		-Cwt.-		-Dols/Cwt.-	-Thou. Dols.-

LIVESTOCK REVIEW

FARMS in South Carolina were estimated at 24,300 for 1993, many of which included livestock as part of the farm operation. The total **LIVESTOCK and POULTRY INVENTORY VALUE** for 1993 was \$397,397,000 compared with \$388,554,000 in 1992 and \$358,397,000 in 1991.

There were 650,000 **CATTLE and CALVES** on South Carolina farms January 1, 1994, up 3 percent from January 1, 1993 and 8 percent above January 1, 1992. Included in this inventory were 10,000 cattle and calves on feed, down 29 percent from a year ago. The beef cow inventory at this same time totaled 327,000 head, up 5 percent from last year. The milk cow inventory at 28,000 was down 1,000 head from January 1, 1993. The inventory value for all cattle and calves January 1, 1994 was \$347,750,000 down slightly from 1993. The average value was \$535.00 per head, down \$20.00 from 1993 but \$5.00 above 1992.

HOGS and PIGS on South Carolina farms December 1, 1993 totaled 420,000 head, 9 percent more than the 385,000 in 1992 and 4 percent more than the 405,000 in 1991. The inventory value was \$32,340,000 in 1993, up 20 percent from 1992's \$26,950,000. The value per head was \$77.00 in 1993, \$70.00 in 1992, and \$73.00 in 1991. South Carolina ranked 20th in the Nation in hog numbers with North Carolina 3rd, Georgia 14th, and Florida 31st.

CHICKENS in commercial and farm flocks in South Carolina as of December 1, 1993 totaled 6,410,000 birds, excluding broilers, up 7 percent from the previous December 1. The inventory value was \$17,307,000 in 1993, up 45 percent from 1992 and 60 percent above 1991. **BROILER PRODUCTION** grossed \$169,752,000 in 1993, up 25 percent from 1992's \$136,317,000, and 46 percent more than 1991's \$116,475,000. There were 514,400,000 pounds produced receiving an average of 33.0 cents per pound liveweight equivalent.

^{1/} These specie belts show the geographic concentration of each specie within South Carolina. Each belt consist of the top five counties.

1/ Prior to January 1, 1970, definition was milk cows and beef cows 2 years old and over. 2/ Estimates discontinued 1-1-79. 3/ Annual number raised rather than inventory. 4/ Annual average number of layers, (December previous year through November current year).

CATTLE

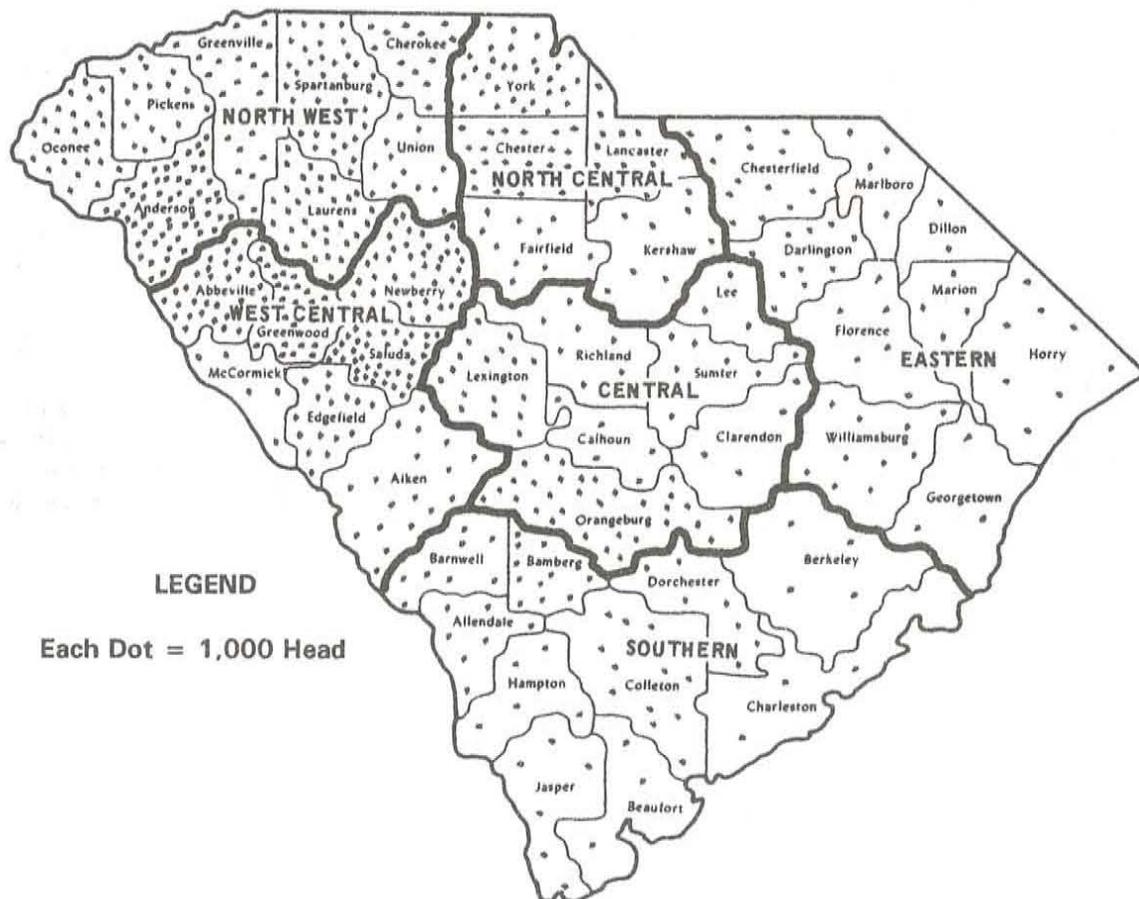

The South Carolina cattle industry had 15,000 **CATTLE FARMS** in 1993 with 327,000 **BEEF COWS** while a decade ago 19,000 cattle farms had 248,000 beef cows.

The 1993 **CALF CROP** totaled 270,000 head, up 4 percent from the 260,000 calves born in 1992 and 10 percent above the 245,000 born in 1991. The **CALVING RATE** for these years measures the steady efficiency of South Carolina cattlemen with 78 percent for 1993 and 79 percent for 1992. These rates are conservative because some cows died or were slaughtered before calving and the January 1 inventory does not include young heifers which had their first calf after that date.

CATTLE and CALVES ON FEED in South Carolina are animals being fed a ration of grain, silage, hay and/or protein supplement for slaughter market that are expected to produce a carcass that will grade select or better. It excludes cattle being "backgrounded only" for later sale as feeders or later placement in another feedlot. There were 10,000 cattle and calves on feed in South Carolina January 1, 1994, down 29 percent from a year earlier.

1979	25,000	1984	20,000	1989	20,000	1994	10,000

^{1/} Cattle and calves on feed are animals being fed a ration of grain, silage, hay and/or protein supplement for slaughter market that are expected to produce a carcass that will grade select or better. It excludes cattle being "backgrounded only" for later sale as feeders or later placement in another feedlot. Cattle and calves on feed are included in the cattle and calf inventory estimates by classes.

MILK PRODUCTION

There were an estimated 450 farms with one or more dairy cows in South Carolina during 1993 with an average of 28,000 **MILK COWS** which produced 376 million **POUNDS OF MILK**. In 1992, the State had 500 farms with an average of 30,000 milk cows that produced 394 million pounds of milk. A decade ago in 1983, there were an estimated 2,100 farms with an average of 48,000 milk cows that produced 573 million pounds of milk. Milk cows have been declining annually since record keeping started in 1944 with only a few exceptions in the mid 50's when some very small increases were recorded.

The 1993 **MILK PRODUCTION** was 5 percent less than 1992 and 7 percent below 1991. The 1993 annual average **MILK PER COW** at 13,429 pounds compares with 13,133 pounds in 1992 and 12,273 pounds in 1991. **FARM VALUE** of milk produced, which includes value of fluid milk and cream consumed in farm households, milk used for farm-churned butter, milk fed to calves, as well as marketings of milk and cream totaled \$55,624,000 in 1993 compared with \$59,457,000 in 1992, and \$56,324,000 in 1991. The **AVERAGE PRICE** of milk in 1993 was \$14.79 per cwt. compared with \$15.09 in 1992, and \$13.91 in 1991.

HOGS AND PIGS

South Carolina had 5,000 **HOG FARMS** in 1993. The leading hog counties in terms of numbers and in order of importance were Orangeburg, Clarendon, Dillon, and Horry. Hog farms have decreased over the last 10 years from 14,000 in 1983. The leading counties in order for 1983 were Orangeburg, Horry, Sumter, Williamsburg, and Hampton.

The 1993 **PIG CROP** of 640,000 was 3 percent above 1992. There were 313,000 pigs saved in the spring of 1993 from 40,000 sows (7.8 per litter). The fall period showed 327,000 pigs saved from 43,000 sows (7.6 pigs per litter).

MARKETING, which includes custom slaughter for use on farms where produced and outshipments, but excludes inter-farm sales within the State, during 1993 totaled 668,000 head in South Carolina. These marketings increased 4 percent from the 1992 marketings of 642,000 head and were 3 percent less than the 1991 marketings of 687,000 head.

EGG PRODUCTION

South Carolina **EGG PRODUCTION** in 1993 totaled 1.282 billion eggs from an average 4,975,000 layers. This is down 11 percent from the 1.447 billion eggs produced in 1992 and 10 percent below the 1.420 billion produced in 1991.

The **NUMBER OF LAYERS** on hand during 1993 were 4,975,000, down 11 percent from the 5,581,000 on hand in 1992 and 9 percent less than 1991's 5,458,000 layers. The annual average **RATE OF LAY** per layer (including breeders) was 258 eggs in 1993 and 259 in 1992. The **VALUE OF EGGS PRODUCED**, which includes hatching eggs and eggs consumed on farms, was \$69,442,000, slightly above the 1992 value of \$69,094,000.

South Carolina **RANKED** 18th in the nation for egg production in 1993 with California 1st, Georgia 5th, North Carolina 9th, and Florida 12th. Within the State, Kershaw County ranked 1st followed by Newberry, Greenwood, Oconee, and Darlington counties.

1/ Average number on hand during month. 2/ December of previous year. 3/ Average number during year. 4/ Annual rate of lay per layers on hand (eggs produced during year divided by average number of layers during year).

BROILER PRODUCTION

South Carolina broiler producers produced a record high of 131,900,000 broilers in 1993. This is 15 percent more than 1992 and 37 percent more than 1991. **POUNDS PRODUCED** totaled 514,400,000 in 1993, up 15 percent from 1992. The **AVERAGE PRICE** received for broilers in 1993 was 33.0 cents per pound liveweight equivalent, up 2.5 cent from 1992. **VALUE OF PRODUCTION**, which includes home consumption, was \$169,752,000, up 25 percent from 1992's \$136,317,000.

Lexington, Aiken, Sumter, and Saluda are the leading broiler-producing counties in the State. South Carolina ranks 13th in the Nation with Arkansas holding the top, Georgia placing 2nd, Alabama 3rd, North Carolina 4th, and Mississippi 5th.

COMMERCIAL BROILERS: Production and Value of Production, SOUTH CAROLINA, 1989 - 1993 ^{1/}

Year	Number Produced	Avg. Liveweight per Broiler	Pounds Produced	Price per Pound ^{2/}	Value of Production ^{3/}
	Thou. Head	Pounds	Thou. Lbs.	Cents	Thou. Dollars
1989	76,905	4.0	307,620	35.5	109,205
1990	83,600	4.1	342,760	31.5	107,969
