

Texas Crop Production

Issue No.: PR-129-14, June 11, 2014

Southern Plains Regional Field Office · Post Office Box 70 · Austin, Texas 78767 · 800-626-3142 · www.nass.usda.gov/tx

Contact: Darius J. Lewis or Betty Johnson

The June wheat yield and production forecast is based on two surveys conducted by the Texas Field Office of USDA-NASS: a farm operator survey and an objective yield survey. The farm operator survey was conducted primarily by telephone with some use of mail, internet and personal interviewers. The objective yield survey collects actual stalk counts and head weights from plots set up in producer fields across the state. Our thanks to all farmers who responded to the Ag Yield survey and to those wheat producers who permitted objective measurements to be taken in their fields.

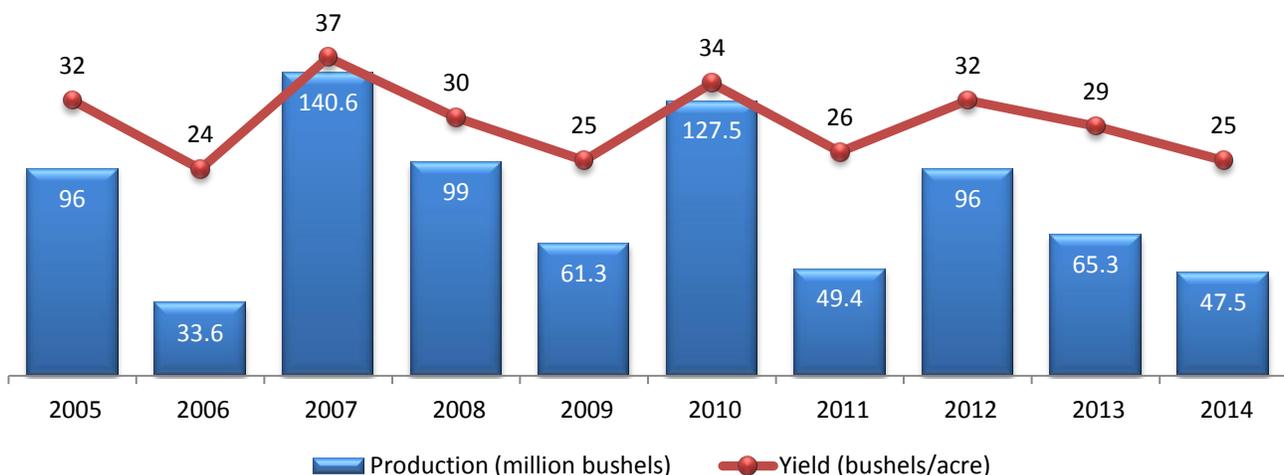

According to the results of these surveys, Texas wheat producers expect to harvest 47.5 million bushels in 2014, down from 65.3 million in 2013. This forecast is down 7.6 million bushels from the Texas May forecast.

Statewide yield is expected to average 25 bushels per acre, down 4 bushels from last year. Harvested acreage for grain, at 1.90 million acres, is down 16 percent from 2013.

Production on the Northern High Plains is forecast at 11.8 million bushels, up 2 percent from last year. Winter wheat production in the Blacklands is forecast at 16.6 million bushels, down 39 percent from last year. The Southern Low Plains' production is estimated at 5.8 million bushels, down 32 percent from last year.

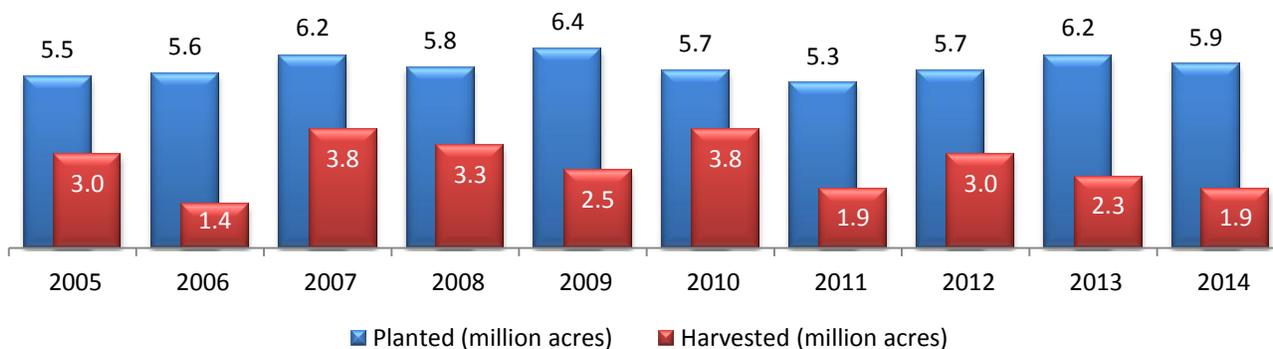

United States winter wheat production for 2014 is forecast at 1.38 billion bushels, down 10 percent from 2013 and down 2 percent from the May forecast. Yield is expected to average 42.4 bushels per acre, 5.0 bushels lower than a year ago. Acreage to be harvested for grain or seed is expected to total 32.6 million acres, up 1 percent from 2013.

Texas Wheat Production and Yield
