A random sample of U.S. producers was surveyed to provide data for these estimates. Survey procedures ensured that all sheep and goat producers, regardless of size, had a chance to be included in the survey. Large producers were sampled more heavily than small operations. About 26,000 operators were contacted during the first half of January by mail, telephone and face-to-face personal interview and 60 percent of the reports were usable. Regardless of when operators responded, they were asked to report inventories as of January 1.
