Issue 3 Month of February, 2009

Rick Kestle, Director

Released March 02, 2008

Agricultural Summary

February storms have contributed to a good moisture situation this spring. Snow packs in the mountains are good at this point. Soil moisture is adequate in most areas of the state due to the abundant snow cover this winter.

Field Crops Summary

Some producers are preparing their fields for seasonal plantings, but others are still waiting for the snow to melt. Some farmers are concerned with snow mold. Snow packs on average around Utah seem to be above normal this year. Fertilizer prices are lower this year compared to the last 12 months

Livestock Summary

Cattle producers are still in the process of calving. Hay supplies are running low and producers need grass on ranges to grow so livestock can graze. No problems of disease have been reported this year.
