MAY CROP WEATHER REVIEW

IDAHO: April plantings began well ahead of the five-year average pace for spring wheat, barley, potatoes and sugarbeets. Mid-April brought cooler temperatures and nighttime lows were below freezing. By the end of the month, crop development and planting activities continued primarily ahead of average, although some sugarbeets were replanted due to cold weather earlier in the month.

OREGON: Precipitation was received early in the month, and field activities began at an average pace. By the end of the month, primarily warm and dry conditions pushed spring wheat emergence ahead of average. Towards the end of the month fruit growers exercised widespread frost protection as nighttime low temperatures dropped to critical levels.

WASHINGTON: Planting activities throughout the month of April were primarily ahead of the five year average pace. By the end of the month, emergence of spring wheat, barley, and potatoes was mostly on schedule. Fruit growers in the Yakima Valley and Chelan County contended with frost protection during several weeks mid-month.
