Nice Fall Weather Reported in Idaho

There were 4.8 days suitable for fieldwork, up from 3.8 days reported the previous week. Idaho topsoil and subsoil moisture levels and pasture and range conditions remained relatively unchanged from the previous week. Reported temperatures were above average for this time of the year. Daily high temperature records were broken in Latah and Nez Perce Counties. Very nice late fall weather was also reported in south central Idaho with cold frosty mornings and warm sunny afternoons. Major farm activities included hauling manure, heavy tillage, and some grain corn harvest. The upper elevation valleys and mountains of eastern Idaho needed more snow.

Intermittent Rain Continued in Oregon

There were 5.8 days suitable for fieldwork, up from 5.2 days the previous week. In northwest Oregon, milder weather with intermittent rain kept fields saturated. Most farm work was completed for the winter. Slug baiting continued and there were scattered armyworm concerns. In northeast Oregon, winter wheat emerged. Some stands started to improve, while others struggled. Grassy weeds were abundant in some fields. Winter canola was doing well. In Malheur County, favorable weather allowed for continued field operations across much of the irrigated land, but some areas were still too wet. Corn harvest continued. In Klamath County, farmers were still seeding. Pasture conditions improved due to consistent moisture.

More Rainfall Occurred Throughout Washington

There were 4.8 days suitable for fieldwork, up from 4.5 days the previous week. Statewide temperatures were above normal. In San Juan County, cooler temperatures set in throughout the area. Some flooding overloaded the area and even kept agricultural activity from happening. Livestock was on stockpiled feed. In Yakima County, consistent rain was received throughout the area. Temperatures were very warm for this time of year. Most cattle were still out grazing. Winter wheat was up and conditions looked good. Orchard crews pruned pear trees throughout the area. In Columbia County, more moisture was needed. Although winter wheat was up, the county was still in drought status.

Soil Moisture Condition — Idaho, Oregon, and Washington: Week Ending 11/28/21

Item and State	Very short	Short	Adequate	Surplus
	(percent)	(percent)	(percent)	(percent)
Topsoil moisture				
Idaho.....	1	17	76	6
Oregon.....	16	19	61	4
Washington.....	15	38	43	4
Subsoil moisture				
Idaho.....	4	47	47	2
Oregon.....	39	18	41	2
Washington.....	31	36	30	3

Pasture, Range, and Crop Condition — Idaho, Oregon, and Washington: Week Ending 11/28/21

Crop and State	Very poor	Poor	Fair	Good	Excellent

Crop Progress — Oregon: Week Ending 11/28/21

Crop and activity	Percent completed			
	This week	Last week	Last year	5 Year average
Winter wheat emerged.....	71	64	88	85
Field corn harvested for grain.....	95	89	90	94

Accumulated Precipitation (in): Departure from 1991-2020 Normals

October 01, 2021 to November 28, 2021

Average Temperature (°F): Departure from 1991-2020 Normals

November 22, 2021 to November 28, 2021

Access to NASS Reports

For your convenience, you may access NASS reports and products the following ways:

- All reports are available electronically, at no cost, on the NASS web site <http://www.nass.usda.gov>
- Both national and state specific reports are available via a free e-mail subscription. To set-up this free subscription, visit <http://www.nass.usda.gov>. Hover over the “Publications” drop down. Under "Receive reports by Email" section in the lower right corner, select the report(s) you would like to receive.

For more information on NASS surveys and reports, call the NASS Agricultural Statistics Hotline at (800) 727-9540, 7:30 a.m. to 4:00 p.m. ET, or e-mail: nass@usda.gov
