The Idaho, Washington, and Oregon combined potato crop valued at $1.96 Billion for 2016

The final value of Idaho's 2016 potato crop was $968 million, up 6 percent from 2015. The marketing year average price for potatoes in Idaho was $6.95 per hundredweight, down $0.05 from last year. In Oregon, the 2016 potato crop was valued at $181 million, up 2 percent from last year. The all potato price was $7.90 per hundredweight, down $0.30 from last year. Washington's 2016 potato crop was valued at $813 million, up 5 percent from 2015. The marketing year average price for all potatoes was $7.70 per hundredweight, unchanged from the previous year.

In Idaho, fall potato production for 2016 totaled 139 million hundredweight. In Oregon, production was 23.0 million hundredweight. Production in Washington was 106 million hundredweight. The combined production for the 3 states was 66 percent of U.S. fall potato production in 2016.

Processors in Idaho and Malheur County Oregon used a total of 92,760 hundredweight in 2016 up 8 percent from 2015. Washington and Oregon, excluding Malheur County, processors used 90,785 hundredweight during 2016, down 1 percent from last year.

Fall Potato Acreage by Variety

The National Agricultural Statistics Service collects variety data in seven States, accounting for 83 percent of the 2017 United States fall potato planted acres. The seven States conduct objective yield surveys where all producing areas are sampled in proportion to planted acreage. Variety data are actual percentages from these surveys.

In the Northwest Region, the following varieties accounted for 10 percent or more of acres planted in 2017. In Idaho, the Russet Burbank variety accounted for 43.2 percent of the potato acreage planted. Russet Norkotah accounted for 18.4 percent of plantings, and Ranger Russet was 17.3 percent. In Oregon, the Russet Norkotah variety accounted for 18.6 percent of planted acres. This was followed by Russet Burbank at 14.5 percent of plantings, Umatilla Russet at 13.1 percent, Frito Lay at 12.1 percent, and Ranger Russet at 10.5 percent of planted acres. In Washington, Russet Burbank accounted for 25.1 percent of acreage planted. Umatilla Russet accounted for 14.0 percent of plantings, followed by Ranger Russet at 11.9 percent of plantings.

The most common variety in the seven states conducting the objective yield survey was Russet Burbank, which accounted 35.9 percent of acres planted in the seven states. This was followed by Russet Norkotah at 11.0 percent, and Ranger Russet at 10.1 percent of planted acres.

Access to NASS Reports

For your convenience, you may access NASS reports and products the following ways:

- All reports are available electronically, at no cost, on the NASS web site http://www.nass.usda.gov

- Both national and state specific reports are available via a free e-mail subscription. To set-up this free subscription, visit http://www.nass.usda.gov. Hover over the “Publications” drop down. Under "Receive reports by Email" section in the lower right corner, select the report(s) you would like to receive.

For more information on NASS surveys and reports, call the NASS Agricultural Statistics Hotline at (800) 727-9540, 7:30 a.m. to 4:00 p.m. ET, or e-mail: nass@nass.usda.gov.
