Dry and Mild as Harvests Take Off

The state saw an overall dry and mild week with widespread light rain over the weekend. Reporters commented that the warm dry days pushed crops toward maturity. A few reporters in the north noted patchy overnight frost. Precipitation received was not enough to combat lingering dry and dusty soil conditions in some areas. Topsoil moisture was 59 percent short to very short this week compared to 55 percent last week. Corn silage harvest chugged along and late haying continued, taking advantage of the sunny weather. The corn for grain and soybean harvests were gearing up with fall seedings going in as fields were cleared. There were 6.2 days suitable for fieldwork statewide.

Across the reporting stations, average temperatures last week were 1 degree below to 4 degrees above normal. Average high temperatures ranged from 68 to 77 degrees, while average low temperatures ranged from 42 to 51 degrees. Precipitation totals ranged from 0.09 inches in Milwaukee to 0.39 inches in La Crosse from 42 to 51 degrees. Precipitation totals ranged from 0.09 inches in Milwaukee to 0.39 inches in La Crosse from 42 to 51 degrees. Precipitation totals ranged.

Corn was 84 percent in dent stage and 43 percent mature. Corn for grain was 3 percent harvested compared to 21 percent last year and a five year average of 8 percent. Corn silage was 54 percent harvested. Corn silage yields reports varied from below average to good.

Soybeans had 85 percent with leaves turning color and 52 percent were dropping leaves. Soybean harvest was getting underway with 3 percent last week. Corn silage harvest chugged along and late haying continued, taking advantage of the sunny weather. The corn for grain and soybean harvests were gearing up with fall seedings going in as fields were cleared. There were 6.2 days suitable for fieldwork statewide.

Across the reporting stations, average temperatures last week were 1 degree below to 4 degrees above normal. BARRON-D.B.: Received 0.4 inch of rain Saturday morning. Corn silage continues and soybean harvest has just begun.

CHIPPEWA-R.M.: About 0.2 inch of rain on Saturday. June was the last time we’ve had a good rain. We got about 0.6 inch in August. A couple of weeks ago, we got 0.4 inch of rain. Good crop of apples.

CLARK-R.H.: Early planted corn is being harvested for corn silage, later planted corn may be a week or two away or after a killing frost. Early planted corn has been average quality and yield. Of course this depends on the area of the county as some areas received rainfall, while other areas were lacking rainfall. There are oats being harvested for grain from late plantings. Yields are average along with quality. Soybeans are dropping leaves and drying down before this time with harvest to begin in a week or two.

VILAS-R.K.: Potato harvest 65 percent completed. Yields are good. Quality is good. No surprises thus far.

SHAWANO-B.R.: Fourth crop alfalfa is being cut with high yield and very good quality. Corn silage is coming off slowly with good good tonnage. Soybean harvest will begin this next week. Apple crop is excellent.

BUFFALO-R.S.: A big week for harvesting corn silage - actually it was a cloud of dust - very dry. No frost and warm days have helped corn maturity - maybe we’ll get ripe corn yet. Hay yields are low. Some are seeding rye.

DUNN-S.S.: Potato harvest in full swing now. Apple yield about average.

PIERCE-G.A.: Soybean harvest started. Corn silage harvest almost complete. Some winter rye has been planted as a cover crop on harvested corn silage acres.

MARQUETTE-D.B.: Potatoes going into storage now. A bit of corn being harvested for grain.

KEWAUNEE-T.S.: The past week saw more fall crops being harvested. The corn for silage continued to be chopped, but for some producers, it is slow going as the corn is still too wet. This is especially the case if the corn is to be stored in a silo bag. The corn will not pack into the bag adequately when it contains too much moisture. For those putting the corn into upright silos or on piles, the conditions are right. However, even there, any excess moisture will run off. Obviously, the longer maturing corn is experiencing this problem more than the shorter maturity corn. In this area, quite a bit of corn silage has been made already. The yield overall looks good. No corn for high moisture has been taken off yet. The harvest of soybeans is just beginning, with some early maturity beans dry enough to be combined. More will be taken off this week, with the harvest continuing for a couple of weeks beyond that. The planting of winter wheat is going strong. For most producers, Sept. 30 is the final planting date that crop insurance will accept for full policy coverage. Some producers are waiting to harvest their soybeans so that the wheat can be planted in those same fields. With about a half inch of rain falling this past week, the winter wheat already in the ground should get off to a good start. More third crop and fourth crop alfalfa was chopped and baled in the last week. For any hay to be baled this late in the season is amazing, to say the least.

OUTAGAMIE-D.F.: Some winter wheat being planted on corn acres that have been chopped off.

GRANT-G.M.: Got 0.6 inch of rain last week.

VERNON-K.Y.: Corn silage harvest underway with average yields. Sunny and windy conditions have helped dry down the corn and soybeans. Temperatures have been above normal, which will help the late planted crops.

GREEN-M.M.: Corn silage harvest is pretty much complete with good yields. High moisture corn is being harvested with yields coming in much better than expected after the lack of rain in July and August. Soybean harvest also started in some fields this week.

KENOSHA-J.H.: It is very dry.

WALWORTH-T.O.: No rain for at least two weeks.
