Wisconsin **corn** production is forecast at 502 million bushels, 4 percent above the 2014 production but unchanged from the August forecast, according to the latest USDA, National Agricultural Statistics Service *Crop Production* report. Based on conditions as of September 1, yields are expected to average 162 bushels per acre, an increase of 6 bushels per acre from last year but down 1 bushel from the August forecast. If realized, the yield will be tied for the highest on record, matching the previous record set in 2010. Acres harvested for grain remain unchanged at 3.10 million acres.

Soybean production is forecast at 90.2 million bushels. If realized, this would be the highest soybean production on record, 10 percent above the previous high from 2010. The September 1 forecast yield is 48 bushels per acre, 4 bushels above 2014 but unchanged from the August forecast. If realized, yield would be the second highest on record, trailing only 2010's 50.5 bushel per acre. Area harvested remains unchanged at 1.88 million acres.

All crop forecasts in this report are based on September 1 conditions and do not reflect weather effects since that time. The next production forecasts, based on conditions as of October 1, will be released on October 9.

**Area Harvested, Yield, and Production Summary – Wisconsin and United States:
2014 and Forecasted September 1, 2015**

United States Summary

Corn production is forecast at 13.6 billion bushels, down 4 percent from last year's record production and down less than 1 percent from the August forecast. Based on conditions as of September 1, yields are expected to average 167.5 bushels per acre, down 1.3 bushels from the August forecast and down 3.5 bushels from 2014. If realized, this will be the second highest yield and third largest production on record for the United States. Area harvested for grain is forecast at 81.1 million acres, unchanged from the August forecast but down 2 percent from 2014.

Soybean production is forecast at 3.94 billion bushels, up slightly from August but down 1 percent from last year. Based on September 1 conditions, yields are expected to average 47.1 bushels per acre, up 0.2 bushel from last month but down 0.7 bushel from last year. Area for harvest in the United States is forecast at a record 83.5 million acres, unchanged from August but up less than 1 percent from 2014.
