Wisconsin **corn** production is forecast at 528 million bushels according to the latest USDA, National Agricultural Statistics Service – *Crop Production* report. Based on conditions as of September 1, yields are expected to average 182.0 bushels per acre, an increase of 1.0 bushel per acre from the August 1 forecast and up 16.0 bushels per acre from last year. Corn planted acreage is estimated at 4.00 million acres. An estimated 2.90 million acres will be harvested for grain.

Soybean production is forecast at 110 million bushels. If realized, production would be a new record high for Wisconsin at 109,620,000 bushels; 2,370,000 bushels greater than the previous record of 107,250,000 set in 2016. The yield is forecast at 54.0 bushels per acre, unchanged from the August 1 forecast but 7.0 bushels above 2019. This would be Wisconsin’s second highest yield on record, behind the 55.0 bushels per acre yield in 2016. Soybean planted acreage is estimated at 2.05 million acres with 2.03 million acres to be harvested.

In response to the derecho experienced on August 10, NASS collected harvested acreage information for corn and soybeans in Iowa. Based on this additional data, NASS lowered corn harvested for grain area by 550,000 acres. Soybean acres were unchanged. Since many producers indicated they were still finalizing decisions regarding some of the impacted acres, NASS will collect harvested acreage for corn and soybeans in Iowa for the October *Crop Production* report.

The forecasts in this report are based on September 1 conditions and do not reflect weather effects since that time. The next crop production forecasts, based on conditions as of October 1, will be released on October 9.

Area Harvested, Yield, and Production – Wisconsin and United States: 2019 and Forecasted September 1, 2020

State	Area harvested		Yield per acre		Production

United States Summary

Corn production for grain is forecast at 14.9 billion bushels, down 2% from the previous forecast but up 9% from 2019. Based on conditions as of September 1, yields are expected to average a record high 178.5 bushels per harvested acre, down 3.3 bushels from the previous forecast but up 11.1 bushels from last year. Area harvested for grain is forecast at 83.5 million acres, down 1% from the previous forecast, but up 3% from the previous year.

Soybean production for beans is forecast at 4.31 billion bushels, down 3% from the previous forecast but up 21% from last year. Based on conditions as of September 1, yields are expected to average a record high 51.9 bushels per harvested acre, down 1.4 bushels from the previous forecast but up 4.5 bushels from 2019. Area harvested for beans in the United States is forecast at 83.0 million acres, unchanged from the previous forecast but up 11% from 2019.
