March 13, 2009

Dear Data Users,

Buckskin was once again the most popular winter wheat variety seeded in Wyoming for the 2009 crop with 44 percent of the total winter wheat acreage. Pronghorn was a distant second followed by Jagalene. This survey was conducted by the USDA/NASS Wyoming Field Office and was funded by the Wyoming Business Council Agribusiness Division.

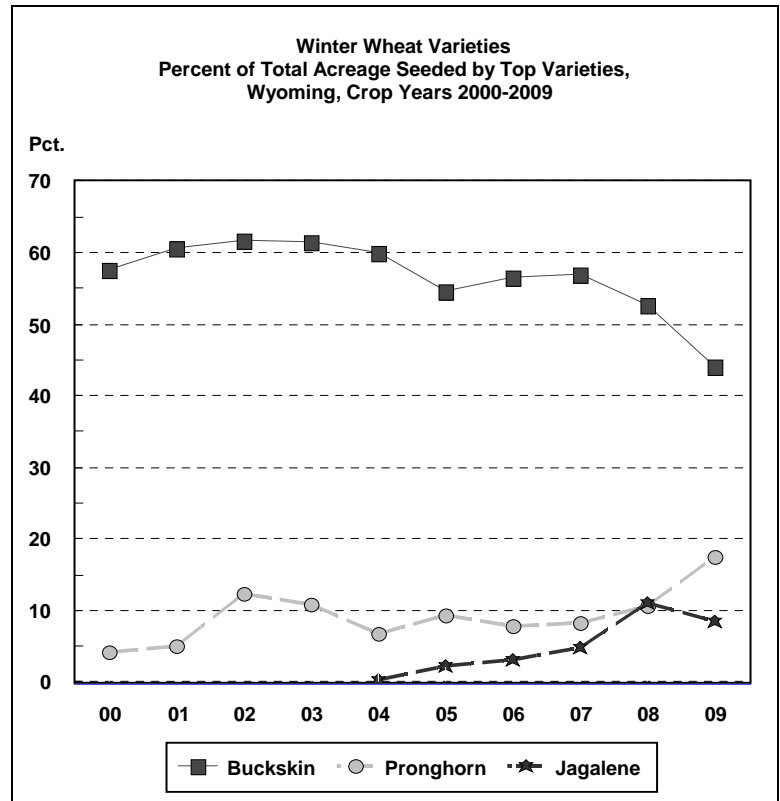

Reports from producers across the State accounted for 47 percent of the 150,000 total acres seeded in the State. Estimates of the percentage of acreage seeded by variety are based on these reports.

I would like to thank all the Wyoming producers whose continued cooperation makes this information possible. If you have any questions about this or any other report, please call us toll-free at 1-800-892-1660.

Sincerely,

Glenda L. Shepler

Glenda L. Shepler

BUCKSKIN AGAIN PLANTED ON MAJORITY OF WINTER WHEAT ACRES

Buckskin continues to reflect the largest winter wheat acreage in Wyoming, accounting for 44.1 percent of the 150,000 acres planted for harvest in 2009. This is the 26th consecutive year (since 1983) that Buckskin has led in acres seeded.

Pronghorn, at 17.4 percent, and **Jagalene**, at 8.4 percent, were the second and third most popular varieties for the 2009 winter wheat crop. The next leading varieties were Akron, Good Streak, Clearfield on 5.9, 4.8, and 3.5 percent of the State's acreage, respectively.

Other varieties with one percent or more of the acreage were Neeley, Yuma, Jerry, Wesley, Cheyenne, and Bond CL.

In southeast Wyoming, Buckskin was planted on 46.9 percent of the acreage.
